I have a question about the Atari ST1040 computer which I couldn't find answered in the usual litterature. I hope someone here is able to help me.

I am working for the Heinz Nixdorf MuseumsForum, a computer museum wich is in the making in Paderborn, Germany. The HNF will open its doors on October 24th, and will then be the largest computer museum internationally.

I am curating, among others, a permanent exhibition titled "PC Hall of Fame". We'll exhibit the Atari ST1040 there, which leads me to my question.

The object description cards have to include information about the producer and the year and location of the production. Though the producer part isn't that difficult, and I know the production period of the entire product line, I don't know where they were assembled.

Is there a way to tell this from the serial number?

Any help appreciated. TIA,

Boris.

How do you know? When was the last time you used it? How about Magic (very windows 95 like)? How about Geneva? How about Linux? How about SMS2? All very usable and functional and (with the exception of GEM) all being constantly updated.

Hear hear!! Never a more true word spoken!

The Motorola 680x0 line has always been more advanced than the 80x86 line. The efficiency of the 680x0 was and always will be superior to the 80x86 too. In the case of the '060 this is even further proven because it takes a Pentium running at high clock speeds (120-133MHz) to match the MIPS rating of the 66MHz '060. But then I shouldn't be comparing MIPS because MIPS has little to do with true computing power. You also have to consider that the 'high powered' Pentium has to also run a kludge of an OS (namely Whinge95). Run MagiC 5 on your Atari clone and you'll see much much better performance than your PC will deliver...

Yep. Supposely shipping this week to erase the 40,000 unit backlog. Power did
blow it. Hopefuly with the beginning of shipments to the que the backlogs will
erase..

> Interesting to note that most Mac rags had them advertised however. Talk

Than don't.. Nobody is putting a p-shooter your head.. If Power doesn't suit
you, than there is Umax, Motorola and Apple.. What choices there are..

I don't know what Power's prices will be in Europe..

As for not buying a 604e machine was due to the pocketbook factor. I decided a
spanking new $899 Powermac Performa would do the job.... Same time next year,
a PowerBase 200 or equivelant will be around a grand..So who knows..

Sounds like sour grapes..Isn't that what Atari did with the Falcon? Selling a dream that never materialized when Atari pulled the plug on it shortly after the release?

>>GEM doesn't do much in features and functionality..
> Wha...?!
> GEM functions quite nicely.
> example: a floppy disk icon is on my desktop, I want to open it, I double

There still Atari programmers? Now back to classic machines.. I agree, old obsolete machines still have limited utility. Mac Plus and Mac Se's can be turned into fax machines for cheap, or run business accounts/record keeping..

I still think a MacPlus fish aquarium(sp) would be cool next to my PowerMac..

> No. Not Multimedia tools. They are not "tools" they are games. they are toys,

Still a standard feature and as you stated is $100 more in your pocket. Apples own serial standard is no barrier hooking one to mine..
>

>   If that 75Mhz machine were so nifty then what really would be the
>   utility in 160Mhz, 200Mhz or 240Mhz machines? They would just be
>   a lot of wasted cpu cycles.

Wasted cpu cycles? Think not..You can never have to much processing power as the market revs up the speed continously..

The 75mhz as you called nifty fit my budget for what it cost me. Considering this was a past dicontinued model which was dwindling in supply in the reseller storage room, I grapped one. Got the third last one.. There all gone now..$895 with a gig, keyboard and fantastic software bundle was a steal..

>   Either the faster machines possess no real utility, or the older
>   slower machine has now been made a dog.

The old machines are considered a dog speed wise to the new faster ones. Just wait when the Be OS is available..
>
>   You really can't have it both ways.

That would be the case if Power is a one product family. Currently Power has a 40,000 unit backlog of PowerBase which supposely will be taken care of by December with shipments down the que to begin this week.

However, Power has other lines with the PowerCenter line which have at least a one week backorder wait. The Power Tower line are shipping and lastly the PowerTower Pro units are shipping.

Unlike Atari which announced vapor that took at least a year later to ship in miniscule quantities.

That maybe true in away. However, the efficiency issue is moot considering What Pentium 120-133 cost today. A third and or less the price of the $3000 plus Hades.. Lets see how effecient the Hades is when running real world apps...

MS Office loads with a snap on a $2500 loaded Pentium 200 box. Monitor and cdrom included..

>Hear hear!! Never a more true word spoken!

Before you call something "true", check its validity. "We have run numerous tests" does not say anything about who has run which tests, what exactly the results where and so on. It can also not be verified. I could also tell you that I have run even more numerous tests that yielded results to the contrary.

>The Motorola 680x0 line has always been more advanced than the 80x86 line.

Verifiable proof is available where?

So? Why don't you use a more sophisticated benchmark or don't say anything at all.

>You also have to consider
>that the 'high powered' Pentium has to also run a kludge of an OS (namely
>Whinge95).

I could name at least 10 living, currently supported OS's that run on Intel-compatible CPUs. A Pentium doesn't "have to" run Windows 95.
(Linux. FreeBSD. Solaris. SCO. NeXTStep. QNX. OS/2. BSDI. Windows 95. Windows NT.)

>Run MagiC 5 on your Atari clone and you'll see much much better
>performance than your PC will deliver...

Yeah. Especially the antics of a supposedly memory-protective OS that crashes when a screensaver crashes. Not to mention the availability of software.

Liking your own system is great, but trying to put down other systems without any facts to show for it is not so great.

- Daniel

>Yep and getting cheaper. The Hades will remain in the stratosphere, un
>affordable..

I don't know where you get your information from, but if you really looked into it you would see that hades is less $$ than a middle of a line Pentium or PowerMac. It is very affordable and faster than either of the above at doing task oriented projects. We have sold quite a few to some interesting places where getting the task done reliably and quickly are the main goal. These machines replaced the PowerMacs that could not do the job.

It is not three times as much, maybe three times as much as an entry level PC, but not three times as much as a Pentium Pro, which is the closest in processing punch on the Intel side and our PowerMac 9500 is pathetically slow in comparison as well and it costs three times as much as Hades.

>Okay, run real world apps and get back to me..

What do I look a butler? What would the point be? You would just claim that they were false anyway. Why don't you come and try one out and see for yourself?

>Yea, and at three times the price..

What, there you go again! You know, you Americans are pathetic when it comes to math.

I know on the Mac there are dongles too that connect to the serial port. These dongles do have a pass-thru, but I've read that they have the same problem as the Atari dongles (ie they come loose, they aren't recognized sometimes, etc.)

I've noticed that the German companies (Steinberg and Emagic) like using hardware dongles, while the US companies (Passport, MOTU, etc) like to use the key disk method.

Either way, you're going to have to bring something around.

IMO, I still would rather have the hardware keys because they don't wear out like key disks. My Notator dongle hasn't given me many problems, and I swap it often with my Spectre GCR cart too. (Remember, this is just MY opinion)

Later, Phil

I wrote a package for the national school system about 2 years ago in Power
Basic, Tony; email me if you have any specific questions. For a PC
program, it's pretty decent IMHO. No GUI, but who wants to cripple a good
CPU with M$ anyhow? <G>

What, exactly, do you think makes his opinion less valuable or less valid
than yours? Tony cites an incident that convinced him of his views; you
simply state an opinion with no supporting evidence. Frankly, if one of
the two posts is pointless, I wouldn't choose Tony's as the pointless one.

Sounds like what I posted. Actually, I am not sure if users of other platforms (that read their Usenet groups) would be "surprisingly" helpful. Since Atarian's have always been very helpful, I just figured that others would be also. I have had an ST since early '85 and have always participated in users groups, platform specific BBS's and Usenet. I have never failed to get a quick and positive response from the Atari "group".

It has been a little demoralizing following this advocacy thread as there has been a lot of very negative baiting from "other platform" people. I always thought that the likes of Gary Kildale (GEM) and some of the excellent programmers at Atari (TOS) and the great programmers that wrote for the ST (SoftLogik's PageStream, Dr. T's Omega, and don't forget OID's!) really brought the PC into the moderm world. I am sure Microsoft and Apple drooled a little when the ST came out .. just guessing on that one! Oh well! There will never be another machine so well put together, tightly programmed and feature packed with what little it had inside. That is for sure! Adios!

This is an obvious attempt to mislead the unknowing. All that is
required for a tax-free status is for the entity to be non-profit.
This makes a tax-free status , even for a university, no special
favor or subsidy.

Furthermore, depending upon my point of origin, it is quite likely
that my tuition pays for everything A STUDENT MAY CONSUME.

With an institution like OSU, THAT is a big distinction.

>
>By maintaining multiple accounts (if you, that is something you have left a
>bit muddled), you would be stealing from the people who pay to keep you in
>school.

That would be me; the taxpayer. That would be me; the tuition payer.

It's the use of hardware resources and network bandwidth that would
cost the university anything. You can't even manage to understand
that simple detail. Another entry in /etc/passwd and a few K on
the mail spool are relatively trivial.

That you percieve my actions to be 'muddled' shows that you are
completely out of your league in this area and should desist from
spreading your cluelessness to anyone else.

You sure do like to make ignorant accusations of theivery without
the slightest clue as to what you are talking about, don't you?

>
>And please don't try to tell me that your tuition covers all of the
>University's costs to keep you there. Anyone who has ever asked the admin
>staff what it costs to keep a student knows better.

If that is the case, I would not be surprised. It seems that OSU
has a knack for wasting money. With the exception of prestige there
is nothing that OSU can deliver that can not, and is not, delivered
for less cost elsewhere at other, private, institutions in this area.

You don't know squat about public universities in ohio.
You don't have any business spreading your disinformation
and poorly formed assumptions to anyone else.

> software and how much would these cost?

There are a couple of ways. The most important things to compare are: Number of simultaneous recording tracks (Falcon offers 8 with a $400 piece of external hardware), number of playback tracks (Falcon offers 8 no compression, 16 with 2:1 compression), and number of outputs (Falcon offers 8 with $400 box), balanced or unbalanced ins/outs.

1. Run Pro Tools III and Cubase Audio on the mac. (if you have Mac already, you'll pay around $5k for the hardware.

Adv: You'll get 16 uncompressed audio tracks playback with this. Very reliable, easy 8 track simultaneous record, quicker wavform redraws then the Falcon, sounds good, good editing environment, solid audio sync, balanced, TDM internal effects.
Dis: Hard to set up with Cubase Mac, EXPENSIVE, Cubase Mac is a little buggier then CAF, MIDI timing is not rock solid.

There's also the cheaper Pro Tools Project setup for Mac or PC, but your limit is only 8 tracks playback, it's difficult to setup (this is around $2500 + computer).

2. Upcoming Korg PCI card with Cubase Audio on the mac (around $1200 + computer when it makes it to market)

Adv: It will allow 8 track simultaneous recording, but ONLY through and ADAT or ADAT a/d replacement converters. Otherwise, only 2 tracks simultaneous recording (+ 2 more if you buy an external A/D converter).
Dis: It doesn't exist yet. Unbalanced ins/outs. You must have a ADAT to get 8 track recording. No software supports it yet (although Deck II supposedly will when it comes out). MIDI timing is still often an issue on the Mac. Card is in the computer, so it's a little noiser.

3. Digidesign Audiomedia III for PC (around $700).

Adv: Cubase will eventually support it, probably
Dis: Doesn't work with Cubase Audio at all yet, because you can't play back recorded tracks while recording new tracks yet. Unbalanced inputs and outputs. 4 inputs and outputs maximum with addional hardware needed for 2 ins and outs. Card is in the computer, so it's a little noiser.

4. Yamaha CBX D-5 ($1500) and/or D-3 (800)

Adv: D-5 sounds great, built-in effects (OK quality), external unit.
Dis: Really tough to setup with Win95, D-3 is unbalanced with a high noise floor, some people can not get either to play back more then 2-3 tracks, SCSI 1 device.

There are other good external devices that can sync to a computer and sequencer, but that's not really integrated

audio and MIDI, as you cannot move around the MIDI tracks
on a computer screen, you have to setup tempo maps, etc.

Soundscape supposedly will be supported by some sequencers
in the not too distant future. This is an attractive
option for PC owners (4 track record/8 track playback,
$3000).

There are a lot of stand alone sequencers that use sound
cards on the PC to achieve up to 24 track playback, but
you're limited to 2 tracks of input and output, making
mixdown difficult (adding effects, eq, etc).

Anyway, that's my two cents..

If you want to get more of a response, you might consider posting this message to comp.music.midi, alt.steinberg.cubase, or rec.audio.pro (places where they probably know little of the Falcon but much about other systems).

In rec.audio.pro, they pretty much laugh about the Falcon, because they tend to be pros in the audio industry who use high end tools costing many thousands, and don't integrate MIDI and digital audio. Although there are people out there using the Falcon in pro situations, I believe its forte' is in the home studio, where its ease of use makes up for it's lower speed then the super digital workstations like Pro Tools.. (I'd hate to have expensive union talent waiting around and a client looking over my shoulder while my Falcon takes a minute or so to draw a 5 minute stereo wave file). On the other hand, when (if?) a good 040 upgrade comes out that's compatible with CAF, look out..

Hi,

I need very very quick help for an Ethernet card called RIBEL C90.

There is on it Jumpers :

J1 to J6 next to the BNC connector
J11 alone
J8 to J10 next to the VME port
J17 to J23 next to the memory

I want to make it running on TT030 ...

For the moment I have the driver for Ribel + !?
It always said that it don't find the card ...

So have you got a driver for it ?
Could you give me more informations about the jumpers because I have
no documentation of it !!

Please reply by Email ... !!

Thanks per advance for your help !!

With Best regards,
Herve

> The 630 Performa costs 2,499 DM (8/500/CD) with 14" monitor and keyboard.

Under a $1000 here if you can find one. Select Computers has a few..

> doesn't compete against them.

No, you need to take a long over due vacation in the U.S. and get a Powermac 7600/132 and still have change left..

This NGs is so quiet recently I thought I'd make a feeble attempt at generating some trafiic so there you have it-"Mac's are shit" or something.

One thing that does puzzle me a bit is how every movie I have seen this year had a Powerbook in it! They even had one in "Stealing Beauty", it's about some gorgeous bird (Liv Tyler!) going to tuscany and in a farmhouse in the middle of no where, no TV, no radio, these people only just have lights and theres a bloke playing on his Powerbook! Does this sort of stuff cost Aplle more than a fortune or what?

Why bother?

Why would anyone in their right mind want to buy a Power Mac now that
Power
Computing has pulled the rug out from under any machine Mac sells.

Buyer can specify configuration from factory
No more shitty Mac memory management
No more soldered caches
Economy models that are as fast as the BIG dollar Mac's

You need to get the lates Mac User from your library and do some
specification
reading and price checking.

Your a looser as usual SinPlop.

```

5,000 X 200 = 1,000,000. That means, in _every_ one of those 17,000
newsgroups you mentioned, about 59 postings will appear with this
chain letter in it.

Ask some friendly scientist (for example, a biologist) what he knows
about exponential growth. Maybe then you'll understand.

Regards,

```

Macs aren't shit. Macs are wonderful hardware for running MagiCMac,
MkLinux, and in a short while BeOS on. MacOS, on the other hand,
does under its still good shiny surface bear a certain resemblance
to things I flush in the toilet, yes. ;-)

Well, it's the same stuff with cars, I think. Wasn't there that Bond
movie a while ago where every luxury sedan was an Audi? That was
puzzling too, IMHO. And no, it's not every movie: in 'Twister' they

use ordinary x86 clone laptops for tornado analysis. To make this a little more on topic: does anyone remember a movie where Ataris were used or at least seen? I don't seem to... but there was one Mac magazine that did use an Atari 1040ST for a cover photo that should illustrate their 'from the first Mac to high tech' article. Boy, did I laugh.

Yours,
    Erik.

:   Paul Womar - Just your average Atari user on the verge of sanity.

From which direction are you approaching then, may I ask? ;-)

Even if they did work (and, as you say, they don't), they are chain letters which ask you to send money in the post; such letters are illegal in almost every country in the world (including Germany and the Netherlands).

>>> 3) Post the article to at least 200 newsgroups. There are 17,000, so
>>> it shouldn't be hard to find that many.
>
>OK, so far so good.

No, NOT so good. That's called "spamming" and it's not only rude (and a REAL good way to get mailbombed), it's a violation of the "terms of use" of every /respectable/ Internet Service Provider (including most educational institutions - anything with "edu", "ac", or "uni" in the domain name).

I spend an hour or so every day doing nothing but ferreting out spams and sending complaints to the spammers' postmasters. On an average day, three to five accounts are cancelled (without refund) because I complained about spammers. If even 10 percent of the people on the Internet would join me, you could figure on eliminating repeat spammers within a month. Newbies would continue to be clueless, of course...

Oh, and just to make sure this is on-topic - I do much of my spam-hunting from my Atari Mega STe. <G>

A Portfolio was used in Terminator (II?) to jimmy the teller machine. At the teime, it was the only full-powered pocket computer running an "open" OS (as opposed to the Radio Shack pocket computers, which couldn't run anything not written specifically for/on them). Also, while it's not a movie, the keyboard player on a late-night talk show (Arsenio Hall) used a STacy that was clearly visible in most shots. And there was a movie some time ago that featured an Atari 2600 (a game cart for the VCS was the pivotal plot device), and showed a room practically full of 800XL systems.

Apple wouldn't have it anyother way that cool people use their products. As
for cost, Apple co advertises the flick on tv with their PowerBook as the
starring role.
Hopefully the new PowerBook 1400 will continue the honor.

Product availability. Seems that PowerComputing currently has a $50 million backlog. My bro has ordered a Powerbase 180 and will not arrive until mid October.

> Buyer can specify configuration from factory
> No more shitty Mac memory management

I would not go as far as that.

> No more soldered caches
> Economy models that are as fast as the BIG dollar Mac's

True. PowerComputing provides more bang for the buck only if they had any to sell.

> You need to get the lates Mac User from your library and do some
> spe cification
> reading and price checking.

I have. I think MacWeek is better. From MacWeek, Motorola is getting into the high volume Mac OS market on Sept. 17 with their new StarMax line. Excellent systems and prices. The difference between Moto and Power is that Moto will have a high volume in assemblyline in place and will over take Apple's unit sales in 1998..

> Your a looser as usual SinPlop.

Sounds like sour grapes to me..

Oh, Macs are fine.  You can run MagiCmac and then it's even possible to run
/good/ software on a Mac. <G>

Hi,

PLEASE - I NEED A QUICK ANSWER - I NEED REALLY QUICKLY TO MAKE THIS
CARD RUNNING !! ...

I need very very quick help for an Ethernet card called RIBEL C90.

There is on it Jumpers :

J1 to J6 next to the BNC connector
J11 alone
J8 to J10 next to the VME port
J17 to J23 next to the memory

I want to make it running on TT030, in BNC ...

For the moment I have the driver for Ribel + !?
It always said that it don't find the card ...

So have you got a driver for it ?

Could you give me more informations about the jumpers because I have
no documentation of them !!

Please reply by Email ... !!

Thanks per advance for your help !!

With Best regards,
Herv�

>Sheesh....Does that include the VAT? Macs must be selling well...:)

Yup, that includes 15% VAT - it's illegal to advertise net prices to the
end consumer. And according to these "great" prices, Macs sell "well"
here.

>> A 6300 Performa costs 4,799 DM (12/1200/CD/TV/Vin/Modem) with 14" monitor
>> and keyboard. The 1705 monitor instead will cost further 799 DM.
>
>Thats about $1400 more in price than the U.S. Must be the high VAT...

Without VAT, it'd be ~4,200 DMs, still 1000 US$s more.

>> The 630 Performa costs 2,499 DM (8/500/CD) with 14" monitor and keyboard.
>
>Under a $1000 here if you can find one. Select Computers has a few..

>
>No, you need to take a long over due vacation in the U.S. and get a Powermac
>7600/132 and still have change left..

And replacing the PSU will cost me the _how_ much? Remember that Apple
dealers are known to charge 549 DMs for an 8 meg SIMM for a 475 Performa
(this happened to a Hamburg Mac user in May 1996) or 634.24 DM plus 15%
VAT for replacing a 475's battery (this includes sending the 475 to an
authorized Apple service center).

It's called "Mehrwertsteuer" (MWSt), but it's the same, IIRC: a tax the
end consumer has to pay for goods and services.

Sorry to take so long, but I just happened to decide to get Linux going on my Falcon
and went to the Linux newsgroups, and guess what I found in comp.os.linux.m68k?

He goes on to say they're worth about $100. Check out the thread, maybe someone there can help.

Good luck!

Dan

It was just SinPlops terminology I was questioning. I
thought a know-it-all like him would know the difference :)

Sales tax over here :) Depending on which State you live,
in California it is about 8%. If you mail order outside
your state, usually no tax is collected. But with all the
Federal Tax structure built into business, you pay for it
one way or another.

Hi,

I need very very quick help for an Ethernet card called RIBEL C90.

There is on it Jumpers :

J1 to J6 next to the BNC connector
J11 alone
J8 to J10 next to the VME port
J17 to J23 next to the memory

I want to make it running on TT030 ...

For the moment I have the driver for Ribel + !?
It always said that it don't find the card ...

So have you got a driver for it ?
Could you give me more informations about the jumpers because I have
no documentation of it !!

Please reply by Email ... !!

Thanks per advance for your help !!

With Best regards,
Herve

Since this is atari advocacy I thought it best to post here.
A school buddy of mine, and a long time Atari shareholder,
received a copy of the JTS-Atari merger documentation (sent out
to all Atari shareholders presumably).

Its a long document 100+ pages and since I don't have OCR I can
at most quote only limited amounts. Is there any interest in
people having questions/comments on the merger posting here and
me consulting this document in answer?

In the interests of openness I'll only entertain public requests,
private emails will be politely turned back. I'd like to avoid
rancor and will only accept discussion based on the information
contained within the document. I can't otherwise speculate on
the information presented, as I'm at most a peripheral observer
of the Atari scene.

It might be possible for me to OCR this document in the future and
post either here or on my web site. Before doing so I'd need
strong confirmation that such a move on my part is not illegal
or subject to attack by JTS, Atari or their agents. It may
be that this info is already net available at an official (eg. SEC)
site or at an Atarian location. I invite others to see if that
is the case, as my time is limited in this matter.

Finally I stress that my offer is informational only and not an
attempt to stir up Atari vs. every-other-system-on-the-planet wars.
I expect a modicum of politeness; blatent and/or nasty and/or
self-preening advocacy may force me to withdraw my offer.
I very rarely get involved in flame wars (if at all) and don't
wish to start now.

Yours,

RSB

HEADLINE: Motorola Computer Group Introduces New PowerPC-Based, Mac OS-Compatible Systems; StarMax Systems Carry an Unprecedented Five-Year Warranty
Emphasizing Motorola's Commitment to Quality

DATELINE: TEMPE, Ariz.

BODY:
Sept. 17, 1996--Motorola Computer Group (MCG) today revealed its new StarMax family of PowerPC-based, Mac OS compatible systems.

Utilizing high-performance PowerPC 603e and 604e microprocessors, the StarMax systems offer a strong price/performance advantage, multimedia-rich
"It is our goal at MCG to expand the Macintosh marketplace internationally," stated Joe Guglielmi, Motorola Computer Group corporate vice president and general manager. "We know there is a demand for high-performance, quality systems; customers can feel confident that the StarMax systems they purchase meet the impeccable Motorola standards of quality."

While traditional computer vendors typically offer a limited one-year system warranty, Motorola's StarMax line carries an exceptional five-year warranty, the most comprehensive warranty plan in the computer industry. The first year of this warranty provides for on-site repair, followed by a two-year return to an authorized depot and two-year return to factory. In addition, there is 90-day out-of-box telephone support and optional service and support upgrades.

In February, MCG announced its broad licensing agreement with Apple Computer Inc. This agreement allows Motorola to sell, support and service Mac OS (versions System 7.5.x and the next major Mac OS release), PowerPC platform desktop systems under the Motorola brand name. As Apple's first licensee granted sublicensing rights, Motorola may also sublicense Mac OS motherboards and private label systems to the OEM marketplace.

"Apple and Motorola have forged a close relationship under the AIM alliance,
meet the impeccable Motorola standards of quality."
hardware design used in the new StarMax systems," commented George Scalise, executive vice president and chief administrative officer for Apple. "We look forward to Motorola's StarMax systems entering the Mac marketplace both within

the U.S. and abroad and are very pleased Motorola has joined the ranks as a Macintosh compatible provider."

In the enterprise market, the StarMax line complements MCG's new family of Windows NT and AIX servers, also announced today. Together, they provide an outstanding client/server solution in application markets such as workgroup computing, Internet/intranet, publishing and multimedia.

Key StarMax Product Features The StarMax design takes advantage of the broad array of industry-standard PC peripherals including monitors, keyboards/mice, floppy disk drives, CD-ROMs, hard disk drives and chassis. This unique capability is available on both the StarMax 3000 and StarMax 4000 product lines.

The StarMax family consists of an entry level 3000 series and high-performance 4000 series. Both series offer a choice of desktop and minitower configurations and will be available worldwide. The 3000 series uses the robust 603e microprocessor and includes the 3000/160 and 3000/200 in desktop and mini-tower form factors. These desktops have 256K level 2 cache as the
Macintosh compatible provider."
ADB, PS/2 keyboard/mouse support and 3 PCI slots.

These features allow the user greater flexibility of choice between Apple and PC peripherals, which may provide investment protection for existing assets.

The minitowers offer standard 256K level 2 cache, impressive 32 MB standard memory (expandable), 2.5 GB internal storage and 5 PCI slots. All configurations in the 3000 series include a Motorola 28.8 data/fax modem as well as a software bundle which includes Internet connectivity, office productivity and financial applications, system utilities and additional CD titles valued over $ 1,000 retail.

The 4000 series incorporates the high-performance 604e microprocessor and includes the 4000/160 and 4000/200 in desktop and mini-tower configurations. The desktops have standard 512K level 2 cache, 2 MB video EDO DRAM (up to 4 MB), 16 MB memory standard (expandable), 1.2 GB internal storage and 3 PCI slots. The mini-towers offer standard 512K level 2 cache, 2 MB video EDO DRAM (up to 4 MB), 32 MB standard memory (expandable), 2.5 GB internal storage and 5 PCI slots.

All StarMax 3000 and 4000 systems come equipped with multimedia features including a 8x CD-ROM with 16-bit stereo sound in addition to a keyboard and
The minitowers offer standard 256K level 2 cache, impressive 32 MB standard
Pricing and Availability Systems will be available to the enterprise, small/medium business and small office/home office (SOHO) markets through an extensive network of distribution partners. In China, Nanjing Power Computer LTD, a joint venture company owned by Motorola International Development Corporation and Nanjing Panda Electronics Company, will assemble and distribute Mac OS-based desktop systems for the enterprise, government and education markets.

As announced yesterday, Mitsubishi will be the leading distributor of MCG systems in Japan. Motorola estimates that prices will range from $ 1,595-2,395 for the StarMax 3000 and $ 2,395-3,595 for the StarMax 4000 series. Availability is expected within 45 days in the United States and late 1996 internationally.

About Motorola The Motorola Computer Group is a worldwide hardware and software platform supplier to companies that provide computer solutions. MCG is comprised of three areas of focus: embedded technologies, technical OEM systems and commercial systems. MCG's strategy is to deliver high-performance PowerPC platforms and solutions for Mac OS, Windows NT and AIX operating systems for targeted areas such as graphics-intensive applications, multimedia and the LTD, a joint venture company owned by Motorola International Development

MCG corporate headquarters, along with regional headquarters for Latin America, are located in Tempe, Ariz. Regional European headquarters are located in Maidenhead, United Kingdom and Hamburg, Germany. European channel headquarters are located in Paris, France. Headquarters for MCG's Asia Pacific region are located in Hong Kong. Information about MCG's products is available on the World Wide Web at the location http://www.mot.com/computer.

Motorola Inc. (NYSE:MOT) is one of the world's leading providers of wireless communications, semiconductors and advanced electronic systems, components and services.

Major equipment businesses include cellular telephone, two-way radio, paging and data communications, personal communications, automotive, defense and space electronics and computers. Motorola semiconductors power communication devices, computers and millions of other products. Motorola's 1995 sales were $ 27 billion. -0-

Wait until you try to purchase some property. Iowa's property
tax is sky-high. Then, in the smaller communitys, there are
assessments on top of assessments. There are of course reasons
for this, but all states must support their unemployed somehow.

This posting begs the obvious questions first: why are you getting Atari listings, Mr. Sinclair? <smile>

Funny, I just read a notice from Toad (posted on here) about their annual holiday fest being moved up to October (26th, I believe) and about all the new hardware/software that was going to be shown as well as specials and deals on used stuff...

I talked to Jennifer not long ago and she said that they (Toad) were actually doing more Atari business now than ever...When I asked her if she thought they would be doing Atari stuff 2 or 3 years from now, her answer was "I think we'll always be doing something Atari-wise".

Oh, one more thing Mr. Sinclari...was that Pentium stuff advertised in
the same breath with its ability to use MagiC-PC/Gemulator/Linux/etc,..

Hmm? Well, was it? Thank you...

Hi There...

Sinplop (sinclap2954@cobra.uni.edu) regurgitated...
:
: Looks like Toad has gone to the darkside.. Just recieved a mailing on their
: latest listings. Once listing touts their Pentium boxes. Looks like Toad is
: not doing much Atari business these days..

They are still managing to bundle Gemulator and MagiCPC with these
machines. They still stock the Hades and Medusa 040/060 boxes AFAIK...

Once again this is rhubarb from Sinplop...

Hello Atarilovers,

Perhaps you haven't read any letters like this for years, and Atari ST is now out of fashion. So, I'm speaking to that few people who are mad of this kickass computer. I would like to trade with ATARI ST games (I have about 200 of them...) via internet, e-mail, snail-mail or what. I'm also interested in STe and Falcon 030 games. Please let me know if you're interested. My e-mail address is thehidden@ludens.elte.hu (Yeah, you're right, I'm hungarian!!!), but if you reply to the actual atari newsgroup, that's all right too.

If you reply, I send you my list. And one important thing: I'd like to do this without sending money or asking for some bucks...

Cheers,

The Hidden (aka Sebi)

(P.s.> Mark Love, if you read this message, please contact meeeeeeeee!!!)

    When YOU can afford one, let us know. The only way you can find a clone
    that expensive would be to look in an AMEX catalog. These beasts may just
    make Atari clones look cost competitive again...

Are you serious?  The clones are affordable considering what you get.  Don't
compare any antiquated 030 and 040 overpriced ST and Falcon clones to a 160 mhz
box - considered lowend...

All of the above. Any Atari software is acceptable. If someone writes a Jaguar or Lynx emulator, that would be accepted too, along with titles. This is intended as a generic Atari software group, not as an 8bit or 16bit specific Atari binaries group.

>Office Max advertisement inserts..

Meaningless to the general consumer. When placed next to some $1600
Pentium system (WITH keyboard, WITH monitor, WITH apps, WITH modem)
the general consumer is going to choke at Apple's offerings. No wonder
marketshare is dropping.

>How convenient you leave out the other inserts..
>I agree that the 7600 was a bad choice to be advertised and listed in that way
>because it is more of a specialized model more appropriate for the video and

>more attention to this.

Exactly. They are pushing the wrong stuff on the general consumer.

>You only saw one retail chain.

Yeah, only the largest computer store chain in America. Others offerings
are just as bad if not worse... my local Best Buy has the Macs stuffed into
a small corner. My local Electronics Boutique has a bigger display
of Jaguar software than Macintosh software... and the Jag is dead!

> Like I stated above was a poor choice to
>advertise and Apple needs to be on the ball. However, I have seen plenty of
>inserts listing the new Performa 6400. Hopefuly this will be in next weeks
>CompUSA insert.

Yeah, hidden somewhere in the middle of the insert on the lower 1/3
of the page.

>> Just thought I'd give you this little dose of reality, Pete. I know you

We should all agree not to respond to Peter Sinclair-Day's
drivel any longer. This dude obviously has too much time

to waste since he has posted over 1,800 posts in the last year.

If we ignore him, he'll go away and go to the mac.advocacy or windows.advocacy newsgroups where he belongs. Of course, he might not be able to take the heat since he doesn't argue in any logical sense of the word.

Regards,

Ben

: I completely agree. I remember having an extensive collection of Atari
: art and certainly would like to see all that be back in circulation.
: There were BBS's with literally hundreds of original art and musical
: items. Where are they now?

.mod files may be in some mod archive somewhere or floating out in alt.binaries.sounds.mods. Other stuff may be lost. It's unfortunate, but probably true. If we do eliminate the "software only" restriction, then we would have a means of distributing these files (which are platform specific, thus making comp.binaries.atari a good choice).

True...Like I stated before(which you conveniently deleted)it was poorly listed.
However, CompUSA has the Performas espicialy the new attractive Performa 6400.
Yes they have em because the Mac Jihads have saw them.  When I was last there
they has Performa 2320's which is costs less and includes Apple's 15' monitor.

>>I did not see that listed..  The PowerMac line does not come with apps as i am

You mean Apple's other offerings as well which includes the Performa 6300 and
6400 line which they do have..
```

> Exactly. They are pushing the wrong stuff on the general consumer.

Apple is not pushing the wrong stuff on the consumer. CompUSA advertised a
model that is geared for ones who like to edit/create videos which this model is
geared. The added feature is a option on the Wintel side and cubersome to
install and too boot.
Most consumers would not need a 7600 and would settle for the complete
Performas..

The way that the 7600 was listed showed the perception that it was overpriced.
In my opinion the 7600/120 and 7600/132 are bit over priced. But than is a
popular model for Apple..

Hey, you should see those ads in Germany. MacToday No. 5 advertises the
7200/90 PowerMac for 4,999 DM (1.48 US$ equal 1 DM) -> 3,377 US$. That is
for the 8/500/CD equipped machine, of course, but does include the 1705
monitor and keyboard.

A 6300 Performa costs 4,799 DM (12/1200/CD/TV/Vin/Modem) with 14" monitor and keyboard. The 1705 monitor instead will cost further 799 DM.

The 630 Performa costs 2,499 DM (8/500/CD) with 14" monitor and keyboard.

Give me any Linux PC instead, they are _that_ much cheaper that a Mac just doesn't compete against them.

Thorsten

I'm debating getting rid of this Falcon 030 with 14 megs and NO hard drive. What are your offers? I asume about half of what Toad charges for a new one would be close to right.

I also have Cubase and WordPerfect, but that is a separate deal.

Sorry to post this to your newsgroup, but I had to try it!

I read this and thought, "What could I lose?"
Read through it and maybe you'll like to try it as well!
But please be honest. That is how it works.

"MAKE-MONEY-FAST"

----- Adapted article by Jody Vining (#4 below)   ----------------

Want to make a few bucks? Quick, easy and cheap?

Ok ok, we have all heard this before, laughed at it, thought it was stupid, so did I. But one day, I was bored, and wanted to see if this thing really works, the now infamous newsgroup "make-money-fast" routine.
And well, to my surprise, it ACTUALLY WORKED. I didn't make $50,000 like some said, but I DID make $3,200 in 1 month. Thats not bad for a $5 investment!

So now try it, maybe you'll make less, maybe you'll make more, but its worth a shot right?

The procedure is very simple.

STEP 1. Write your name and address on 5 separate pieces of paper with the words "PLEASE ADD ME TO YOUR MAILING LIST". Fold a $1 note or money order or bank draft in each of the pieces of paper and mail them to the following five addresses:

----
1. Sahba Zadeh, 16115 122 Pl. NE, Bothell, WA 98011, USA

2. John England, 570 Vista Ave. Palo Alto, CA 94306, USA

3. Jeannette Bidegain, 2301 Redwood Street, #1406, Las Vegas, NV
89102,USA

4. Jody Vining, 987 Shetland Ave, Winter Springs, FL, 32708

5. Mitch Whiteley, 1026 N. 510 W. Apt. 4A, Logan, UT 84341

STEP 2. Now remove the 1st name on the list, move the other 4 names up (5 becomes 4, 4 becomes 3 etc) and put your name and address as number 5 on the list. You can do this by re-typing this article or simply editing and re-posting it in this or another newsgroup.

STEP 3. Post your amended article to at least 200 new groups (there are 17 000 of them).

You are now in the Mail Order Investment Business and you will start receiving $1 returns by mail within a week or two. The more newsgroups you post to, the bigger your return will be. You may want to rent a Post Office Box to handle the volume of mail you are likely to receive.

If you wish to remain anonymous, you can use a pseudonym such as "The Manager" or "The Investor", but make sure your address is correct!

NOW LET ME TELL YOU WHY THIS SYSTEM WORKS!

Of every 200 postings I made, I received an average of 5 replies, YES - ONLY 5, each with a $1 bill enclosed. You make $5 for every 200 postings WITH YOUR NAME AT NUMBER 5.

Each person who sent you $1, now also makes let's say,only 200 additional postings WITH YOUR NAME AT NUMBER 4, i.e. 1000 postings. On average therefore, 50 people will send you $1 with your name at number 4. You make $50.

Your 50 new agents make 200 posting each WITH YOUR NAME AT NUMBER 3 or 10 000 postings - average return 500 at $1 each is $500. They make 200 postings each WITH YOUR NAME AT NUMBER 2 = 100 000 postings = 5 000 returns at $1 each = $5 000.

Finally, 5 000 people make 200 postings each WITH YOUR NAME AT NUMBER 1 and you get a return of $50 000 before you name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE ONLY MAKES 200 POSTINGS! Total income in one cycle = $55 500.

From time to time, when your name is no longer on the list, you take the latest posting that is appearing in the newsgroups, SEND OUT ANOTHER $5 TO THE NAMES THAT ARE ON THE LIST, PUT YOUR NAME IN AT NUMBER 5 AND START POSTING AGAIN. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Let's review the reasons why you should do this: THE ONLY COST FACTORS ARE 5 STAMPS, 5 ENVELOPES, AND 5 $1 BILLS. Anyone can afford five dollars to put into such an effortless investment with SPECTACULAR RETURNS.

Some people have said to me "What happens if the scheme is 'played out' and no one sends me any money"? Big deal! So you lose $5 - but what are the chances of that happening?

Do you realise how many Internet Users there are? Do you realise how many times this scheme can be utilised over and over again - with COMPLETELY NEW people participating?

There are not HUNDREDS, NOT EVEN THOUSANDS, BUT HUNDREDS OF THOUSANDS OF NEW INTERNET USERS EVERY MONTH!

Remember, read the instructions carefully and play FAIRLY...that's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the newsgroup postings to make sure everyone is playing fairly. You know where your name should be.

Petey,

You could do something useful for once in your life and recommend a good Powerbook to me on which I can run MagicMac so that I have a portable Atari.

There are just so many availble new and second hand that the choice is confusing. Mainly I want at least 8mb RAM and 120Mb harddisk so that I can run some of the more powerful/demanding Atari applications.

A good display would also be a boon, though the price is an issue as I can;t afford the 2000UKP that Apple are asking for the 5300/100 8/500!!!!

Spencer.

That depends, John. Has the "clock patch" been applied? That's another
US$80 that will have to be expended (along with round-trip shipping to/from
Toad or someone) if C-Lab didn't make your Falcon.

    Also, Toad's RAM prices seem to be behind the times. Their idea of a fair
    price for 14M of RAM may be waaaay out of line...

    ...RAM prices have recently crashed.

>True...Like I stated before(which you conveniently deleted)it was poorly listed.
>However, CompUSA has the Performas espicialy the new attractive Performa 6400.

At 2800 bux, not impressive. Such machines only compete with the most
expensive faster pentia with double the RAM and double the disk and
other odd improvements over the 6400's standard hardware...

>Yes they have em because the Mac Jihads have saw them. When I was last there
>they has Performa 2320's which is costs less and includes Apple's 15' monitor.

The 6320 is relatively low end by now and still more expensive than even
an Aptiva, included monitor included...

...and the Aptiva has more disk, faster CD, etc...

Any other model at CompUSA (at least in these parts) is either a
scratch-n-dent or one-of-a-kind floor model closeout.

[JEDI deleted this]

>model that is geared for ones who like to edit/create videos which this model is
>geared. The added feature is a option on the Wintel side and cubersome to
>install and too boot.

Oddly enough NONE of the models featured by CompUSA had the advertised
capacity to edit video. One would expect such a high end feature to at
least be listed in the specs. I tried looking at apple, but they're webpage
is an ugly mess. No wonder you mac-n-twits think that you need a cray
for websurfing...

...btw, the 6320 (as opposed to 2320) come with a video CAPTURE
board. This is, in fact, distinct from a video EDITING board.
If you want to capture video stills, on a PC, (which is all
that even apple claims that the 6320 can do) all you need is

Snappy. Snappy just plugs into the parallel port with none of
those notoriously 'ugly' card installations.

Even the ST has Rombo. Someone might even come up with an ST
hack for Snappy.

Having a TV tuner feed to, what really is, a 13" monitor
is of limited value.

>Most consumers would not need a 7600 and would settle for the complete
>Performas..

Or much cheaper clones. 2400 bux is still quite a chunk of change.

>
>Different world here..

They'll likely dominate their space with PC wares and yet
give more respect to an orphan games console than an 'allegedly'
'viable' computer platform (mac).

Ma and Pa Kettle cruising the mall will see a vibrant PC market
and Atari, which they thought went out of business long ago, and
yet no Mac presence. The Kettle's will keep this on their minds as
they go into CompUSA and see the PC's stretch across the length of
the store in back and see that the Macs are hidden in the corner...

Yet you will gloss over this.

You ARE in a different world.

What can I tell ya. The UK situation could be different than the U.S. Apple has cancelled the current PowerBook line for now. They will only ship the backlogs and the ones returned for repair.

The PowerBook 190 and 520 would be good candidates..

I would rather just plop a 19" TV next to my monitor.
Wait a minute: I did plop a 19" TV next to my monitor.
Cost me half as much as a tuner card and is much bigger too...

> At 2800 bux, not impressive. Such machines only compete with the most
> expensive faster pentia with double the RAM and double the disk and
> other odd improvements over the 6400's standard hardware...

The Performa 6400 includes a 2.4 gig HD, 16 MB HD, 200 MHZ processor and SRS sound woofer inside plus a shit load of software apps.. Also includes full PCI and 28k modem. I have seen that model discounted to about $2400-$2500.

True, I thought Apple could of done better with a lower price. Once demand is caught up, the price will fall when the 220 mhz one ships in November.

>
> The 6320 is relatively low end by now and still more expensive than even
> an Aptiva, included monitor included...
>
> ...and the Aptiva has more disk, faster CD, etc...

Very true. Apple is still probably selling a shit load of them anyways. Expect the 6320 to be no more soon with a 6340...

> Oddly enough NONE of the models featured by CompUSA had the advertised
> capacity to edit video. One would expect such a high end feature to at

Considering that the card is already installed..No mess nor fuss. Plus Apple has also the new Avid card for the new PCI Performas.

> Even the ST has Rombo. Someone might even come up with an ST

Just because that store has Jagflop stuff doesn't mean its available at all stores. The local Software ECT has a nice Mac section, but I still buy almost all software from the big three mailorder because I save lots of money. Why should I pay $30 more for a game?

>   Ma and Pa Kettle cruising the mall will see a vibrant PC market

Not at my local store. The salesdroid hated the Jag and Atari and not one was allowed in the store becuase it would still be sitting there ie, Jag 1.0!

So what are they replacing with or are they doing an Atari and pulling
out of the market???

>The PowerBook 190 and 520 would be good candidates..
Hmmm, people are asking over 1000UKP for a 520, you could buy a new
one for that!

Ok, thanks for the recommendation I shall go browse the glossies for
some better pricing.

To quote Twain........

Apple will be in business when you are gone. Apple has not stopped laptop
production. Apple has canceled the current laptop line to make room for the
new supposely in October. One department has ordered 200 Epics.
Apple's cash may be used to purchase Be..

The current PowerBooks have been a pain due to quality issues. However, they are not pulling out but readying a new line called Epic(which is suppose to be rock solid) by Oct-Nov. Epic will have a flip up keyboard, processor card, faster PPC, larger screen and internal CD-Rom... My school has put an order for 200 Epics..

     Actually it is Apple that usually cant keep up with bells and whistles.
     PC's though relatively mediocre in their system software, are much
     more scaleable in functionality and price. One need not spend twice
     the price.

With the new Mac clones, the percieved price advantage that the Wintel world has had, has been smashed.. Apple is not the only Mac vendor in town. In two weeks, Motorola and SuperMac will have highpowered and inexpensive clones to boot. I for see that individuals can buy motherboards from Motorola to slap a system together to boot. Who knows, a Mac Shopper maybe concieved..

>>Interesting...

It also limits me to whatever Apple thinks is good stereo equipment. Apple will also quite likely charge you a premium for whatever they include. Thus, if you want vicious sound (or gobs of RAM) you're better off adding it to the system later.

Nevermind that I already have a computer->stereo setup already and have had one for about... 8 years... and dont need another (overpriced) one.

>> software
R>
R>   You first. You have NO idea what you are talking about. NONE of you
R>   pundits do, despite your pomposity.

Really? Somehow I fail to see how pomposity relates to knowing what constitutes theft and what does not. Let's try this: Assume I am running Ratsoft. Assume I have not bought it, but rather that I have cracked it. According to my definition, I have stolen it. According to yours, I'm "just trying it out" or some such mealy-mouthed phrase.

You call those who champion honesty "pompous," while maintaining multiple usernames (probably multiple accounts) at Ohio State University. Given your history, I wonder if you have even paid the low (partially-subsidized) fee for access to /one/ of those accounts, but that would be ad hominem, so let that go for the moment.

>> (3) Mark is a pirate and assumed that everyone else is too. In this
>> case,
>> he belongs back in the Mac and PC newsgroups where he claims he sees
>> lots of open discussion of where to get stolen software. Or he can talk
>> to "JEDI" (in email), the only known Atari user in my killfile (right up
>> there with
R>
R>   Yes, how DARE I stand up for the rights of someone for whom you
R> believe deserves NO rights.

Actually, as "JEDI" you've been in my killfile for weeks simply because neither you nor sinclap make a lot of sense on most issues, and rather than clutter up my hard drive with your particular brand of venom, I choose to let your discussions remain invisible. "JEDI" is an alias that was used to post for a very long time without a valid email address, as you well know, making it impossible to respond in email when that was appropriate. I found it easier to avoid the temptation to followup with inappropriate comments when I didn't see postings by "JEDI" at all.

As for standing up for someone's rights - you are conversing with someone who spent 23 years risking his tender pink body in the US Army so that young, unhousebroken puppies like yourself would be able to go to college without having to learn Russian or Chinese first. Strangely, I can't recall ever reading anything in the Constitution, nor in the Amendments to same, about "the right to steal the fruit of programmers' hard work and use it without paying for it." Perhaps you would care to enlighten the rest of us as to the exact location of that guarantee?

 R>   Yes, how DARE I state the folly of copy protection that has never
 R> stopped any pirate I know of.

Actually, that is probably quite a revealing remark to those who are aware of your history as a pirate. It's not inaccurate, of course - locks (and copy protection) only keep honest people honest, and in most cases, are easily foiled. In point of fact, I make a practice of making copies of copy-protected software - for myself; so I don't have to buy a new copy (which might be hard to find) when the original wears out, and for anyone who did buy the original, which /has/ worn out. That, however, isn't piracy -the law calls it "fair use" as you well know.

 R>   Better that you hide your eyes, cover your ears and let the world
 R> pass you by...

Perhaps. Or perhaps you are deliberately distorting my position so as to make yourself look (to the ignorant and naive) like an honest citizen.

 >> - there's someone who openly espouses piracy. ...
 R>
 R>   Under a very limited set of circumstances mind you. You conveniently
 R> neglect that part. You moralists seldom live up to your own piousness.

I wouldn't call it "piousness," nor even "moralism," but slapping emotionally-charged labels on a position that one wishes to oppose is an excellent tactic - in politics and the courtroom. It isn't respected by /thinking/ people, however. You talk like a lawyer (that's intended as an insult) - willing to argue any position with equal venom, er, vigor, as long as there's a profit in it for you.

You back-peddle very well, by the way. Anyone who came into this conversation late and was unaware that Deja News allows them to read the entire thread would think you were being unreasonably attacked.

 >> Ratsoft, too (might even be the guy who wrote it - now there's a product
 >> that would be ironically deserving of being cracked).
 R>
 R>   Guess who?

Thank you for confirming my suspicions about "JEDI" at least.

Followups redirected.

Typical cold war mentality to justify your 23 years on the gov't welfare dol...What a racket that you can retire after 20 years regardless of age to recieve a pension with free/subsidized medical care for life and as a nation we can't provide for our children. No sir, we would not need to learn Russian and Chinese unless you want to(my bro speakes the Chinese language). The whole cold war mentality was a farce....

The operative word here is LAW. You talk about law, not THEFT, nor even morality. You know nothing of the LAW. Yet you like to preach about it.

As always, I encourage EVERYONE to look into this for themselves. I also suggest reading up on the Uniform Commerical Code as it applies to consumer protection and software. You may find recourse for your own software gripes.

>Ratsoft. Assume I have not bought it, but rather that I have cracked it.
Actually, cracking it usually implies that you bought it.
It had to come from somewhere. It did not just magically

appear on those disks...
>According to my definition, I have stolen it. According to yours, I'm "just
>trying it out" or some such mealy-mouthed phrase.

You are breaking copyright, that is ALL. You are not yet committing any crime: not even a misdemeanor. Check out the law and caselaw for yourself. Any videotape has the relevant parts of the USC in it's little 'notice'.

If you discover that the program is complete trash, then you have saved yourself the trouble of dealing with merchants that have no repect for you and will LIE to you to attempt to keep you from knowing about, or exercising your consumer rights. I refer to the now common disclaimer in software stores stating that they cannot take returns on opened software because of copyright law. This is a rather bogus lie. I also encourage EVERYONE here to debunk this one for themselves as well.

If you find it usable and merchantable and then not yet buy it, than you have broken the limited conditions under which I stated that unlicenced software use is ethical.

Your objection is a non-sequitor red herring.

> >> (3) Mark is a pirate and assumed that everyone else is too. In this

Tee Posle Govno.

We don't need your brainwashed fascist asses to protect our liberties.
In fact, idiots like you threaten them. "...get back to the front..."

Merely being a mercenary is NOT standing up for ANYone's rights.

...and you are pompous. You assume much too much about me without
any reason. Then you use these assumptions to prop your own
miniscule ego up.

>reading anything in the Constitution, nor in the Amendments to same, about
>"the right to steal the fruit of programmers' hard work and use it without

As always, you 'moral' types need to LIE to make a point.
I never defended the pirate's right to pirate.
Since you admittedly never paid any attention to the post in
question, you have no real substantive things to say in the matter.

The man was accused of commerical copyright infringement. This is
distinct from 'normal piracy'. This distinction is made by both the
law and the pirates themselves.

If you stopped being pompous for a moment, and learned a little about
those you want to blindly lash out at, you might gain some real
understanding. You might actually come up with some decent arguements
too. Although, I'd imagine that you would consider that futile. ALL you
can do is blindly demonize. Like the original person I flamed, you seem
to think that one 'immoral' act implies them all.

Sorry: the universe isn't that simple. If you'd spent less time being
a Terminator for the state, you might be able to parse it [universe].

You can't stand the implication that there might be positive aspects
of the scum you like to rag on so much.

This subject is not as binary as you'd like to think it is.

>paying for it." Perhaps you would care to enlighten the rest of us as to the
>exact location of that guarantee?

As always, the only way that you can make a point is to LIE.
Peter Sinclair-Day lies less than you do. Next to you, he seems
positively sensible.

>
> R>   Yes, how DARE I state the folly of copy protection that has never
> R> stopped any pirate I know of.
>
>Actually, that is probably quite a revealing remark to those who are aware of
>your history as a pirate. It's not inaccurate, of course - locks (and copy

>protection) only keep honest people honest, and in most cases, are easily

Keeping honest people honest? Now THAT's an OXYMORON!
IF you were so morally superior, you wouldn't need the help!

>foiled. In point of fact, I make a practice of making copies of
>copy-protected software - for myself; so I don't have to buy a new copy
>(which might be hard to find) when the original wears out, and for anyone who
>did buy the original, which /has/ worn out. That, however, isn't piracy -the
>law calls it "fair use" as you well know.

Actually, there are specific provisions in the law for that sort of copying. However, for home users, such provisions are redundant until such time as non-comercial copyright infringement even becomes a misdemeanor.

You also neglected to mention that any Atari user who wants to make archival backups of their copy protected disks must take efforts to secure the software that does this. For the 'honest' user, this requires extra monetary expenditures in order to 'fairly use' their software.

Since such software is commonly available to the point that even an 'honest' user such as your self has access to it (after forking over more money) then: my original point still stands.

This is one aspect of Atari-dom which is yet another hurdle.
This is one aspect of Atari-dom that the 'others' don't have to put up with.

Suggestion to the bloke from Hawaii: if you can't do sequencing without dongles on the Atari: DUMP IT, if you can. Consumers only hurt themselves whenever they tolerate that which they can avoid somewhere else in the marketplace.

A suggestion to Peter: suggest an alternative to a Falcon+Cubase for the Mac. Try to come up with a usable solution for the lowest possible cost. Don't necessarily recommend the newest most expensive hardware if the task can be done in a satisfactory manner on the cheap.

This is the domain of _Power without the Price_ afterall...

>
> R>   Better that you hide your eyes, cover your ears and let the world
> R> pass you by...
>
>Perhaps. Or perhaps you are deliberately distorting my position so as to
>make yourself look (to the ignorant and naive) like an honest citizen.

What have I distorted? (patented VENOM)

On the other hand, I have pointed out your distortions.

```
       That is what started this whole bit actually.

>
> >>  - there's someone who openly espouses piracy. ...
> R>
> R>    Under a very limited set of circumstances mind you. You conveniently
> R> neglect that part. You moralists seldom live up to your own piousness.
>
>I wouldn't call it "piousness," nor even "moralism," but slapping
>emotionally-charged labels on a position that one wishes to oppose is an
>excellent tactic - in politics and the courtroom.  It isn't respected by

      They are descriptive labels. They fit quite well, regardless
      of any implications of bad rhetoric.

>/thinking/ people, however.  You talk like a lawyer (that's intended as an
>insult) - willing to argue any position with equal venom, er, vigor, as long
>as there's a profit in it for you.

       Your assertion is not consistent with the available evidence.

>
>You back-peddle very well, by the way.  Anyone who came into this
>conversation late and was unaware that Deja News allows them to read the
>entire thread would think you were being unreasonably attacked.

        Anyone with DejaNews could see that a pirate was accused
        of activity that is not normally associated with pirates
        solely because some SPA wannabe couldn't handle the possibility
        of someone being a pirate and actually being a better software
        customer [than an SPA wannabe].

        If they would wish to discount my ideas solely becuase of
        my political views, that is another matter.

        Hopefully, they would be more honest to themselves and to others
        about their biases.

This is a request for information. I am curious how one would
go about replacing an Atari Falcon & Cubase sequencing setup.

There is a certain form of inconvenient, physical, copy protection
that comes with Atari Cubase: a dongle. I was wondering if it would
be possible to escape this 'inconvenience' by switching to another
plaform (PC or Mac).

Most atarians seem content with their 'inconviences'. So, they do
not go away (like they have on other platforms). So, the frustrated
atarian has few options: Take it or Leave it.

I'd like to know what would be involved in the latter.

What would the minimal functional requirements be in hardware and
software and how much would these cost?

<RFC Invalid> barked in COMP.SYS.ATARI.ST on 03 Sep 96:

I> Newsgroups: comp.sys.atari.advocacy,comp.sys.atari.st
I> References: <960901094319_100550.3170_EHK85-1@CompuServe.COM>
I> <555895772.26103.99.starship@3rdplanet.com>
I> From: Guess Who?

It's pretty damned easy to guess. Even Petey Boy probably figured it out.

I> We don't need your brainwashed fascist asses to protect our liberties.

Excellent. Glad to know you consider me a fascist. At least it explains some of your general attitude. Of course, I am absolutely sure you get up at 4:30 every morning and get home after a hard (physically - as in hot, sweaty, dirty labor) day's work at & PM (on a good night), make about 750f the going rate for people with similar technical qualifications in the civilian market, get to retire with lots of promises but damn near no actual follow-through (and BTW, you might tell Petey-Boy to do some research on that subject if the thought crosses your mind, he doesn't know squat on /that/ subject, either)... Well, anyhow.

I> In fact, idiots like you threaten them. "...get back to the front..."

Pardon me, but in case you haven't noticed, all of the US military is volunteers - and has been for over fifteen years. If you don't want to grow up, you don't have to. If you don't want to serve a little time in your country's service, you don't have to. You don't have to talk to me, either. Strangely, I doubt that either of us will suffer very much if you don't.

I> Merely being a mercenary is NOT standing up for ANYone's rights.

If I had been a mercenary, I wouldn't be still working for my bread and butter - mercs make LOTS of money. You claim to know a great deal about the law; you don't know shit about military matters, and that's a fact.

I> ...and you are pompous. You assume much too much about me without
I> any reason. Then you use these assumptions to prop your own
I> miniscule ego up.

I assume nothing that is not apparent from your posts. I might add that I don't recall calling you any names based on your politcal leanings (even if I knew them, they aren't germaine to this discussion - although I am pretty sure it was either you or sinclap who signed my yup to the marxist-leninist mailing list).

Perhaps I am pompous. I'm admittedly even a little arrogant. I have years of accomplishments that I can point to (which don't involve borrowing a floppy from a friend and making an unlicensed copy of it), so perhaps I have some small reason to feel a sense of pride in what I have done.

>> reading anything in the Constitution, nor in the Amendments to same,
>> about "the right to steal the fruit of programmers' hard work and use it
>> without
I>
I> As always, you 'moral' types need to LIE to make a point.
I> I never defended the pirate's right to pirate.

I disagree. You must have a very short memory. Or perhaps we interpret what you have said differently. Are you now saying that piracy is unethical?

I> Since you admittedly never paid any attention to the post in
I> question, you have no real substantive things to say in the matter.

Your straw man is a deliberate non sequitur. /You/ say I didn't pay attention to the original post; I say I not only paid attention, I replied point-by-point with reasoned argument, ad nwas met with ad hominem attacks. Those tactics may work in the courtroom; they don't work with /thinking/ people.

I> The man was accused of commerical copyright infringement. This is
I> distinct from 'normal piracy'. This distinction is made by both the
I> law and the pirates themselves.

Define 'normal piracy,' then, if you will. I don't believe there /is/ a legal definition of 'normal piracy.' And, the man was not /accused/ of criminal copyright infringement; it was stated that he /might/ be a pirate, along with 2 other explicit possible explanations. /You/ seized on the piracy issue (as you do on a regular basis, EVERY time the subject comes up.) At this point, poor Mark probably wonders himself what he actually said; I can reprint it here, if necessary, but the gist of it was that he wanted to knwo where to find "cracked Atari software." He neglected to state in his first message that he owned a licensed Cubase copy and wanted a dongle-free version. I and others took offense when he posted private email in public (non-flaming, email, I might add - you can't obfusticate this issue). ONLY after it was said that asking for cracked software was asking for flames, did he clarify (or backpedal - it's a POV issue, after all).

I> If you stopped being pompous for a moment, and learned a little about
I> those you want to blindly lash out at, you might gain some real
I> understanding. You might actually come up with some decent arguements
I> too. Although, I'd imagine that you would consider that futile. ALL
I> you can do is blindly demonize. Like the original person I flamed, you
I> seem to think that one 'immoral' act implies them all.

Hardly - although in the Judeo-Christian culture, guilty of one /is/ guilty of all. Ask a Rabbi or Priest if you doubt that.

As for decent arguments, if you are studying law, which appears to be the case, I suggest that you have concentrated on finding emotional buttons to push and neglected rigorous logical argument. Here are several "decent" arguments that you have conveniently ignored:

(1) If someone is incapable of cracking Cubase himself and really wants to run Cubase, he will either buy it, or not use it at all. Thus, there is a roughyl even chance (all other things being equal) that a pirated copy falling into his hands will result in a lost sale.

(2) Every cracked copy of copyrighted (and copy-protected) software in circulation eventually comes to the attention of the legitimate copyright holder. Given enough incidents of this type, an intelligent man who writes his programs for money (commercial or shareware) will leave the Atari platform and program for the PC, where even a piece of absolute crap is gauranteed sales of at least ten thousand copies if it has pretty pictures and good distribution.

I> Sorry: the universe isn't that simple. If you'd spent less time being
I> a Terminator for the state, you might be able to parse it [universe].

Universe: The totality of all things that exist. The cosmos. The world.

That includes me, you, my kids and grandkids, Bill Gates, and the concepts of "right" and "wrong," which seem to mean different things to you and to me.

And obviously you don't know shit about what I did in the military, other than get shot at.

I> You can't stand the implication that there might be positive aspects
I> of the scum you like to rag on so much.

No one - not even Adolf Hilter or Josef Stalin - is ever wholly evil or wholly good (and quote me no saints - their "goodness" is based on their adherence to a moral code that is predicated on fear, just as obeying the law is for most people). /You/ have insisted that I and the other proponents of supporting /legal/ copyrights are pompous moralists with a black-and-white view of the world. You are also perfectly well aware that we are no more or less narrow-minded that you are; but for the purposes of this discussion, you have chosen to make personal attacks because you know quite well that "piracy is the same as shareware" is not only specious, it's a silly position when analyzed rationally.

I> This subject is not as binary as you'd like to think it is.

Kindly show me where theft shades into legal ownership and I'll agree with you.

I> As always, the only way that you can make a point is to LIE.

You fail to point out the lie. Calling me a liar does not make it so; calling me Jane Fonda won't make me an actress, either.

I> Peter Sinclair-Day lies less than you do. Next to you, he seems
I> positively sensible.

Actually, Peter probably believes what he says; this does not qualify as lying, but simply ignorance (willful ignorance, I think, but there is a difference between knowing the truth and denying it, and simply refusing to recognize it). That doesn't make him reasonable; nor does your comparing him to me make us similar.

>> Actually, that is probably quite a revealing remark to those who are
>> aware of your history as a pirate. It's not inaccurate, of course -
>> locks (and copy protection) only keep honest people honest, and in most
>> cases, are easily
I>
I> Keeping honest people honest? Now THAT's an OXYMORON!
I> IF you were so morally superior, you wouldn't need the help!

Moral superiority doesn't keep burglars out of an unlocked house. Any

/idiot/ can recognize that fact. And people who are normally honest will often steal when they feel they stand no chance of being caught, and when they don't think the person or business they are stealign from will be hurt; that's been a long-established fact in psychology (readily available for you to look up in the University library, I'm sure). Your argument that "piracy doesn't hurt anyone" is rationalizing theft so you won't feel guilty. Rationalizing your culpability doesn't make it legal, and doesn't ameliorate the harm you do to software developers.

I> This is one aspect of Atari-dom which is yet another hurdle.
I> This is one aspect of Atari-dom that the 'others' don't have
I> to put up with.

There are very few commercial programs still in production for the Atari, as you well know; other than Cubase, I know of no other currently-porduced copy-protected software (that doesn't mean it doesn't exists, but that it's fairly obscure).

The copy protection on Cubase is a nuisance, yes; it's also reasonable, although the hardware solution they selected has faults as all such copy-protection always does. The fact that, every month or so, someone asks for a cracked copy of Cubaseshows that /their copy protection works./ Otherwise, no one would bother to ask. And you have repeatedly stated that copy protection only pretects the software from copying by the clueless; therefor, by your own arguments, most Cubase users are clueless. /I/ would say that they are more interested in music than in programming.

I> Suggestion to the bloke from Hawaii: if you can't do sequencing
I> without dongles on the Atari: DUMP IT, if you can. Consumers
I> only hurt themselves whenever they tolerate that which they can
I> avoid somewhere else in the marketplace.

That is actually good advice. Helping him select that software would be even better.

I> A suggestion to Peter: suggest an alternative to a Falcon+Cubase
I> for the Mac. Try to come up with a usable solution for the lowest
I> possible cost. Don't necessarily recommend the newest most expensive
I> hardware if the task can be done in a satisfactory manner on the cheap.

A note of caution here; Peter, seriously consider contacting the original fellow in email. Using a university account for commercial purposes violates the non-profit charter of the University and puts both that charter and your account in jeopardy. We have already seen you state that you sell Macs to supplement your income; your continuing advocacy of the Mac endangers your University when you post from that account. This is /not/ to be construed as a threat; it is simple fact (I won't act on it, if that gives you any comfort, but I can't speak for anyone else you have annoyed over the past 2 1/2 years).

>> Perhaps. Or perhaps you are deliberately distorting my position so as
>> to make yourself look (to the ignorant and naive) like an honest

>> citizen.
I>
I>   What have I distorted? (patented VENOM)

Well, let's see, you've called me brainwashed, a fascist, a "Terminator" (considering that Arnie played both an "evil" and a "good" Terminator, I'm not sure that counts, but I am sure you intended it as an insult), an idiot, a liar, a hypocrite... Actually, you have portrayed me as somewhat less evil than Hitler, but no much less. Yet you call my statements that "pracy is theft" distortions? Strange.

I>   On the other hand, I have pointed out your distortions.
I>   That is what started this whole bit actually.

There's where we differ. You call them distortions. I call them facts. The dictionary here agress with me. It's Webster's New World Dictionary.

>> >> - there's someone who openly espouses piracy. ...
>> R>
>> R>   Under a very limited set of circumstances mind you. You
>> R>   conveniently neglect that part.

You neglected to define those circumstances at the time.

>> /thinking/ people, however. You talk like a lawyer (that's intended as
>> an insult) - willing to argue any position with equal venom, er, vigor,
>> as long as there's a profit in it for you.
I>
I>   Your assertion is not consistent with the available evidence.

The "available evidence" is that you are Steve Hughey (that may be spelled incorrectly) who profits from commercial copyrighted software, "Ratsoft BBS," who maintained a piracy-oriented BBS for some time in the Los Angeles area, who was the cause of a respected citizen changing his telephone number for releif from your harrassing phone calls after he objected to your pirate activities... In short, Sir, you are a hypocrite of the first stripe, taking money for software and decrying others who wish to also profit from their programming.

>> You back-peddle very well, by the way. Anyone who came into this
>> conversation late and was unaware that Deja News allows them to read
>> the entire thread would think you were being unreasonably attacked.
I>
I>   Anyone with DejaNews could see that a pirate was accused
I>   of activity that is not normally associated with pirates
I>   solely because some SPA wannabe couldn't handle the possibility
I>   of someone being a pirate and actually being a better software
I>   customer [than an SPA wannabe].

I am afraid that most people who can add and subtract are able to see that distributing software which has not been licensed is likely to result in loss of sales. How, pray tell, can causing lost sales make a "better software customer?"

I>   If they would wish to discount my ideas solely becuase of
I>   my political views, that is another matter.

No one even /knew/ your political views before you brought them into the discussion, certainly not at the beginning of the thread.

I>   Hopefully, they would be more honest to themselves and to others
I>   about their biases.

I have arrived at my current set of biases through experience, not by worshipping at the feet of some ivory-tower pseudo-Marxist. You haven't had the time to collect your own set of biases yet.

They cost /you/ nothing. Are you under the mistaken impression that /no one/ pays for your internet access? Your University is subsidized by taxes, and by a tax-free status. The University's access is paid for by taxes.

By maintaining multiple accounts (if you, that is something you have left a bit muddled), you would be stealing from the people who pay to keep you in school.

And please don't try to tell me that your tuition covers all of the University's costs to keep you there. Anyone who has ever asked the admin staff what it costs to keep a student knows better.

Switch to another platform. Start participating in the various Usenet newsgroups that pertain to that platform. You will be surprised how helpful they will be in getting you set up with the software and hardware that will fit your particular needs. It would help if you took a mild approach in replying to them whenever they do correspond. I am too old and lack the patience to offer any other good advice. Pointed (no-nonsense) suggestions are the most useful. Don't be bitter about things and spend your time dwelling on what system you should have spent your time and money on. Be flexible and happy. Get on with the good stuff. Turn that frown upside down! Good luck with your endeavors! Ciao!

JEDI wrote:
: This is a request for information. I am curious how one would
: go about replacing an Atari Falcon & Cubase sequencing setup.

First and foremost, you need to buy a few 'roundup' issues of Keyboard or Electronic Musician, where they might compare most current s/w available, price, etc. The Keyboard roundup was not more than a few months ago.

Steinberg has a nice upgrade/crossgrade policy--I think it's half price or something to that extent.

: There is a certain form of inconvenient, physical, copy protection
: that comes with Atari Cubase: a dongle. I was wondering if it would
: be possible to escape this 'inconvenience' by switching to another

: plaform (PC or Mac).

Got news for ya, puppy. I know for a fact that the PC progs have a dongle. Except since a PC doesn't have a cartridge port, they designed it for the parallel port, AFAIK. I believe that it's a pass-through (they have to let you hook up a printer, hm?). For evidence of wierd stuff with their dongle, do a DejaNews search (old and current archives in power search) on alt.steinberg.cubase for 'dongle' or 'parallel.'

I don't know about the Mac side, but the odds are that if they h/w protect a $600 prog on two platforms, well, most probably the Mac has some form of it as well.

You either should subscribe to alt.steinberg.cubase or get on the Cubase list (it's the same list) if you want to find out more from Steinberg and their users. Also, Steinberg reps and programmers answer questions and take a fairly active role.

: Most atarians seem content with their 'inconviences'. So, they do
: not go away (like they have on other platforms). So, the frustrated
: atarian has few options: Take it or Leave it.

Every now and then a post crops up on a.s.cubase about the dongle. It was met with the same gamut of responses that we have seen here on comp.sys.atari.st, though it's hard to say which ones were more acidic.

: What would the minimal functional requirements be in hardware and
: software and how much would these cost?

The rest of this post concerns mostly HD recording on multiple platforms. I wrote it before I looked back and saw that you just wanted a seqencer. Many sequencing programs are becoming audio integrated now, so it may still be relevant. The references for further information, though, would still fit. Sorry for the misunderstanding, but hey! There's some audio info included gratis.

Without audio support, things get a lot cheaper that what follows below. I know that some people install Cubase on laptops with a parallel port or PCMCIA MIDI adaptor.

I can only write about what I know, as I don't have any reference in front of me. I shopped around for different platforms specifically for audio recording, and eventually chose the Atari Falcon, knowing full well that Cubase Audio may not be supported further.

Any DSP port hardware you have will not commute. There are a few digital interfaces out for the other platforms, allowing you to hook up and sync SMPTE to an ADAT or dump to a DAT.

Soundcards are a tricky business on the PC. Out of the thousands out there, you have to find one, review it, search for recommendations from people and/or Steinberg, and then hope it works with your particular PC compatible properly, together with drivers for Win 3.1 or 95. I don't believe Steinberg officially supports 95 just yet.

On the Mac, their audio programs seem to work well from what I've read, but one must be particularly careful as to which Mac you get, as the internal memory, speed and type of chip can and will determine the quality and # of tracks. The Mac has built-in sound.

There are extra MIDI ins and outs and other expanders for 'em and many other gadgets. Due to the sheer number of PCs and Macs out there, hardware and software abound.

The reason I chose the Falcon was because I wanted a device that could record more than 2 tracks simultaneously as well as keep the tracks that I do record separate and distinct. On the PC and MAC, the more popular devices are the Yamaha CBX-D3 ($1000) and CBX-D5 ($2000). They are self contained but expandable HD recording devices with 2 tracks in and four out. The D5 has effects and more DSP stuff built in.

(minor aside)
Do you really want to spend at least $2000 becuase you were insulted by a dongle?
(end minor aside)

Anyway, I can't give you a comparative h/w s/w cost because after I found what I liked, I stopped shopping. I thought about Macs really hard, as the nicer ones can do 24 track playback w/out additional h/w, compressed in the same manner as Cubase Audio Falcon 16 track mode. The nicer ones weren't cheap, though, even used. Shop around the .forsale or .marketplace and look up specs using FAQs and web searches.

I thought about PC's as well, but again, the issue of simultaneous multiple-track recording was and still is alien and cost-prohibitive. I don't know the max tracks playback capacity. The sheer gigamass of s/w and competition though certainly drew me, and I felt competent enough to troubleshoot and install anything on any one of them beasties, but again with the cost. I would want at least a 133 P5, 16+ megs, big HD (or a small one installed and get a used one), and the PROPER sound/MIDI card. It's much more reliable to use a dedicated MIDI card to sync up the external HD or ADAT recorder.

Anyway, sorry I couldn't give you concrete everything. There's a lot out there, and not enough time to lurk through it all. I'd check with music stores, local studios, mail-order music shops, web pages, catalogs, magazines(!), and anything else I didn't think of.

Okay, Rich (nudge, nudge, wink, wink).

I'm not 100% sure what's going on here, but I've never seen Rich mask a post, and
the
address in this message (which I can't get the source of through Netscape, because
I
haven't learned enough to unhack posts) is _not_ the same one Rich normally uses.
Grow
up people, get a life, and quit wasting bandwidth on morons. Do _not_ reply! And
will
someone get this guy's account revoked if he's really faking his identity?

BTW, how do you set up a killfile on Netscape? I'm tired of manually marked posts
from
idiots as read.

Dan

 Hmmm, I recently got a copy of Power Basic for my PC, I lurked in
comp.language.basic.misc for a while, well a week or two, took and
read about a thousand posts, including the faq,
 I then asked a perfectly valid BASIC programming question, I got one
response, a most insulting mail stating that if i could not be botherd
to spell correctly or use a spell checker, then why should anyone else
bother to help me?, (my post was simple and understandable, but yes
spelt badley)
 From my short sharp experience, I would say that the ONLY friendly
and helpfull platform that does not expect x amount of dollars for
helping is ATARI, I found that it is not just a tale spread by
ATARIans, we really are the most helpfull :)

Cheers..............!ynoT

I said..
>So can a Mac SE and LC class machine in thier standard memory configuration
>when using System 6 and System 7.1. Nothing efficient about the Atari OS
>considering it still 1980's based.

Jabba said..

Unix is 70's based & VMS is 60's based but both will stomp all over MacOS or MicroSponge wares.

Digital Research managed a feat that Apple could never manage. They produced a 192K OS/GUI. No amount of Apple cheerleading on your part can change this.

I said..
Thats interesting, didn't Apple produced a 128k OS/GUI. As the time progressed Apple added features and functionality while the Atari OS stagnated. Not impressive at all.

The ST OS is bloat compared to the Atari 8 bit OS. Isn't the Atari 400 had only 16k?

>The 7200/75 can run fine with 8 megs of memory when using low memory apps such
>as ClarisWorks, WriteNow, Nisus which have no equals in the ST platform.

Jabba said..
What does ClarisWorks have that AtariWorks doesn't? What does Nisus writer have that WordPerfect doesn't & what does WriteNow have that WordWriter doesn't? And why should we care? Will we ever need it? Will we ever use it? Will we ever care?
How will it better suit someone (anyone) who's needs with Atari may be lacking?
8Megs and Low memory apps are oxymorons.
Also, which of those will be using VM, thus slowing them down to XT speeds...

I said..
Power and a future. AtariWorks is an unsupported app by Atari and has not been improved upon. Not surprising considering that Atari is the publisher. Nisuswriter, Clarisworks and WriteNow would be considered high end on the ST platform considering that no equivelants exist.
Low memory/high powered apps exist and is not an oxymoron and yes Virginia VM is not needed and the speed is not slowed down. Jabba you need a clue.

>Considering the price is $999 which includes 4x CD and two ethernet ports
which
>are expensive extras on the $999 Falcon.

Jabba said..
Actually, the ethernet port is included on the Falcon.
Furthermore, a second ethernet port is a pure absurdity.
Nevermind that an ethernet port is one of the more esoteric frills.
A 4x CD can be had for 60bux these days; the benefit of wider hardware support.

I said..
The CD is still an exta option that costs money. CDrom is not officially supported by Atari. I hav been to software stores and have not seen Atari ST CDrom software.

Jabba said..
Compudyne 14" monitor that CompUSA sells. Tell me how to hook it up
to a mac without any additional cost.

Try hooking it upto a ST/Falcon with out extra cost.

>The vast majority of Macs are shipping with at least 1.6 Gig and 2 Gigs.

Not in CompUSA, they're not. But, we've already established
that you're out of touch with their product anyways.

shipping HD is 1.6 Gig.

>>>CompUSA in Des Moines.

Jabba said..
>> You are LYING. CompUSA doesn't sell IDE 2 gig drives for that cheap.
>
>Yes they do..According to their Sunday insert in the paper. Shocking is it?
>Need to spend more time in the present and not in the past.

Odd that such a great price is nowhere to be found on their webpage.
For a retail establishment 200bux for a 2 Gig drive still is rather
remarkable.

The closest thing to that deal that they ACTUALLY have is a $300 dollar
Maxtor 2 Gig drive. No, the rebate doesn't count: CompUSA is still selling
it for $300. (regardless of manufacturer's rebates and misleading ads)

...and you're still a liar.

I said..
Sorry, the rebate does count and the price was/is $199! Get over it!!
I am a liar? You are out of touch..

```

Gue
nther) writes:

I said..
>Why would I need to spend $300 for ram? 16 megs go for $120. Why would I need

Thorsten said..
Because a PowerMac needs _at_least_ 16 megs to run acceptably. Anyone who
knows Macs will advise you to get 32 megs - which go for ~280 US$s here.

I said..
Yes, a Powermac should have 16 megs ram.   Powermacs shipping today have 16
megs ram as standard.

Thorsten said..
>a Centronics cable? $100 for one is absurb.

I said..
It's so "absurb" that it costs that much because it's a fact, I guess.

Thorsten said..
It's called the "PowerPrint" cable.

I said..

I don't need a PowerPrint cable. I just plugged in my serial cable. No fuss
involved.

>Why would I need a monitor
>adaptor that costs $50 when Sony and Viewsonic bundles one?

Thorsten said..

Because I own a Sony, and there wasn't a bundled adaptor inside the
package? And what do you expect me to do when I buy a Mac - get a new
monitor also?

I said..

The Sony monitors listed in my Mac catalogs and at retail stores ship with the
adaptor at no extra cost.

>Why would I need
>to spend $200 for a keyboard when one can be had for less than $50?

Thorsten said.

An Apple "enhanced keyboard" costs 200 US$s. Period.

I said..
If you want to spend $200 for a keyboard, your money. I can get third party
ones for $50 or less. You have choices..

>500 meg HD
>is sufficient for most people but to include a extra one can be had for less

Thorsten said..

500 megs are ridiculous for a Mac - they might suffice for an Atari, but
then - Atari apps usually ship on two or three disks.

I said..
Macs shipping today have at least 1.6 gigs today. You must be referring to a
closeout model that was released in 1995. I have seen yesterday Pentiums with
500 megs..

I would imagine that, if you were told you were getting a 30 percent pay cut, you wouldn't consider it "tiny." Yet when it doesn't affect you personally, 30 percent is a "tiny" fraction of Web browsers?

Yes, too bad they don't allow students at U.N.I. to have a lunch hour; then he
might realize that, even at Intel, people aren't required to work without

surcease for the entire day.

That's a vast oversimplification. Certainly there are hundreds of
applications written for the 1040ST tha run quite happily in 1 meg of RAM.
More colors than the three ST resolutions allow would be nice, but aren't
/required/ to be useful.

> 8+ megs of FREE ram after all required OS and video ram is
>loaded would be one requirement.

Considering that the OS requires next to no RAM (it's in ROM, remember?), and that even running a 1 gig drive on my 1040ST is quite comfortable, video RAM is the only consideration that really applies here. Certainly, I wouldn't buy a Falcon with 1 meg of RAM, but then, I'm accustomed to a minimum of 4 (my Mega STe, and my uprated 520ST before that) and will probably uprate the 1040 Real Soon Now. People who haven't ever use an ST with more than 1 meg would be comfortable enough.

Well, I'm not really sure why we're discussing Alphas. You 've given a price quote intended to show that a Mac clone is price-competitive with a Pentium-based PC. I replied saying that even an Alpha (much faster) system is priced at about the same level, i.e., that Mac clones still do not offer a definitive price advantage.

I'm not saying that Macs don't have any advantages (even though I, personally, don't like them), and there are some Mac-only software titles, so for some applications Macs make a lot of sense. However, IMHO, with the recent improvements in PC's and operating systems available for them (at least for the kind of things I do with the computer, NT is much better than MacOS, for various reasons, stability being one of them), capability of running a dozen or so of Unix flavors, NeXTStep, NT, Solaris, Linux, etc., as well as with the availability of Alpha and MIPS-based systems at very competitive prices, Macs, at least from my point of view, can not compete on either price or OS feature basis.

Thats very interesting.  Last time I checked the price/performance of the
Falcon, looked like Lexus pricing.  But the Lexus is worth every dime.
PowerMacs/Pentiums perform in the Lexus class with Escort prices.

Where are you getting that 30% number? Netscape claims that 80% of web browsing is done using Navigator. A lot of windows users are probably using Internet Explorer.

Apple never produced a compact OS. They managed to squeeze some of
it into system ROM but, system was always disk based and LARGE.

The ST is still better engineered than even your most current macs.
The OS was appropriate to the power of the hardware and the resources
available. It did not bog down the user with quite a bit of fluff that
would be unusable anyways.

>
>The ST OS is bloat compared to the Atari 8 bit OS. Isn't the Atari 400 had
>only 16k?

The ST also does quite a bit more. Furthermore, what 'bloat' the ST
does have is not a hinderance to the user. Even the most basic ST

can be quite productive. The OS doesn't get in the way and eat up half or more of the system's resources and performance.

Despite being a relic, an ST can more completely take advantage of its feature set than newer more powerful machines.

An 8Meg Low Memory App is an Oxymoron.

>   Also, which of those will be using VM, thus slowing them down
>   to XT speeds...
>
>I said..
>Power and a future. AtariWorks is an unsupported app by Atari and has not been

These aren't features. These are advertising buzzwords. They don't get any work done. They are useless to anyone but mindless clones like yourself.

>improved upon. Not surprising considering that Atari is the publisher.
>Nisuswriter, Clarisworks and WriteNow would be considered high end on the ST
>platform considering that no equivelants exist.

This is an assertion that you've yet to support. It is not unlike the majority of your rants in this respect.

>Low memory/high powered apps exist and is not an oxymoron and yes Virginia VM
>is not needed and the speed is not slowed down. Jabba you need a clue.

No VM for Nisus under 8M? I highly doubt that. Those box specs do tend to be so understated on Mac's/PC's. Is this experience talking or just more hot air.

Furthermore, if it does need 8M all to itself and it will in fact start swapping out pages if you run anything else than, your precious Nisus has effectively turned your powermac into a FatMac or ST.

For if any serious apps nullify the usable multitasking aspects of your OS, you might as well be running an ST.

...and you've still yet to state one REAL feature that any of these

have that any of US would want or need, let alone something that
we may not be able to get with our own wares...

Considering how expensive you think Falcons are, another 60 bux is
trivial.

>supported by Atari. I hav been to software stores and have not seen Atari ST

Atarians dont need any corporate hand holding.
CD support is there. Your denial of it is just another
one of your great lies.

Regarding retail prescence: this damns Macs MORE than it does STs.
Just ask your more substantial rivals, the one's you are too
cowardly to confront.

>    Sorry, the rebate does count and the price was/is $199!  Get over it!!
>I am a liar?  You are out of touch..

     That tactic borders on fraud and is as slimey as you are.
     If 300 bux goes on my AMEX, then the price is $300 NOT $200.

     Nevermind that the drive in question is IDE NOT SCSI and that
     it is from a brand notorious for poor interoperability: Maxtor.

: It's not being self-centered. It's recognizing that it is of almost no
: value to support lynx because they represent such a small part of your
: potential customers.

Who said anything about lynx? Netscape Exten$ions are **Netscape**
exten$ions. This means: If you *do not* browse the Web with Netscape you
are screwed. This includes: M$ Explorer, Lynx, Mosaic, Slipknot, older
versions of Netscape, and lots of other commercial browsers (most of
which are based upon Mosaic, which is HTML 2.0 complaint).

And so you would delightfully screw everyone who does not comply with
your choice of browser, simply because they have a different opinion.

Internally the Cyrix 586 is structured as a 486 is. It's designed with a 32-bit bus, the same number of registers, the same instruction set (I could be a little wrong there), but the main diference is that it runs faster at the same clock speed. Unfortunately, this comes at the cost of compatibility, because there are some apps which use 'illegal' (undocumented) 486 instructions which do not run on the Cyrix.

If you want to buy Cyrix's Pentium clone, get a 686.

(BTW, it's useless to argue this, Petey. It's the truth, and you can't fight the truth. Want me to drag one of the chip groups into it? Then you'll really look like a fool.)

>Never mind that the Cyrix 586/133 has the speed of a Pentium 90. What part do
>you not understand?

The notoriously absent part detailing just why the Cyrix 586 is such
in anything but name only. NO technical details were given. ONLY a
performance spec was given and that performance spec puts it next to
the AMD486/133 also refered to as a 586. Furthermore, the performance
spec is linearly scaleable to the peformance of any other 486 chip
most notably the AMD or i486DX4/100 and AMD486DX4/120.

>
>In what way? And how very likely? Or is this Jabba speak?

Very slowly once again for the anacaleptic:
Overclock a 486DX4/100 to 133Mhz and it will
perform the same as your so called Cyrix 586.

They actually sell such beasties. They are
called AMD 586/133's. These are just fast
486's; this is common knowledge in the field.

Mind you, this is all according to the CPU
performance specs you gave. They are quite
likely bogus.

Cyrix in general is something to be avoided becuase they
are a little TOO cheap. Stick with AMD (same price & perf.).
Cyrix is notorious for incomplete implementations (personal
experience) and misleading labeling.

: The ST OS is bloat compared to the Atari 8 bit OS.

The 8-bit OS wasn't a GUI, it was just a method of reaching the system. For a GUI, the ST is an amazing competitor in terms of memory. It's small, it's fast, and it works. (which is something I cannot say about the two most popular OS's out there. For me, MacOS and Windoze (any version) do not work. At all.)

: Isn't the Atari 400 had only 16k?

And it worked very nicely with that.

: Kyle R. Hofmann <rhofmann@crl.com> writes:

: > And so by your logic, the Alpha is superior, and that's what we should
: >all be using.

: Yes, the Alpha is superior and if they created a relatively inexpensive system
: then, yes, that is what we should all use. But it has not been demonstated
: that DEC makes such a system.

Actually, I don't think that they make an inexpensive system. Their systems are quite expensive, and from a couple of the price quotes I've heard on here ($9000 is the highest), the prospect of getting a used system from a couple of years ago for the same price as a Mac sounds pretty good.

: I really wanted an Indigo Impact at work
: but I didn't get one because they cost way too much. But they ARE better.

That sounds like me begging the CS teacher to ask for something really outlandish (like Suns) when he writes up the next grant proposal. I really want one, but we won't get it (he won't even mention it) because they cost way too much. But they ARE better. :)

: > But that still doesn't go up to 400 or 500mhz.

: The sum of the MHz speed of all the processors would be 480MHz.

That doesn't mean that it would be equivalent to 480mhz. If everything was optimized for multi-processor systems, then it would certainly be worth at least on 480mhz processor.

But very little on the market today is intended for multi-processor systems. There are a few multi-threaded programs out there, but not many. Certainly fewer than to make it worthwhile.

: > To prove a point.

: I don't understand your point. Is it that Macintosh is a superior system
: but costs too much?

You rant and rave about the Mac being superior. There's always something superior out there, even to your Mac, so why make such a big fuss about it?

Perhaps, but the Mac compares fairly well to the 266MHz Alphas that
Byte benchmarked.

> That sounds like me begging the CS teacher to ask for something really

Yeah, it sucked, I ended up with an Indy :)

> You rant and rave about the Mac being superior. There's always
>something superior out there, even to your Mac, so why make such a big fuss
>about it?

I don't think that I have been "ranting". And this is advocacy where
everything is worth making a fuss about :)

This has nothing to do with 'customers'. You show my point better than I do.

BTW-serious businessmen wont ignore potential customers. That's why the serious commercial pages usually have low-bandwidth and text options available.

Perhaps the Mac press in the U.S. is full of shit? The advice to put 32
megs of RAM into a PowerMac comes from the German magazine c't (which is
the same magazine which blew Syncronys' fake software out of the water).

OK, I've read the stuff posted to this group for quite a while now, and I must say that each of you has a point. For a Mac fanatic like Mr Sinclair-Day, the mere thought of trading his PowerMac in for a 68030 or 68040-based Atari system must seem ridiculous. For the Atari fanatics here, myself included, the mere thought of switching to a system that can neither allocate memory dynamically nor perform pre-emptive multi-tasking must seem equally out of question.

Considering this, don't you think that this whole war is a little strange? No Mac user will ever buy an Atari, and no Atari user ever will buy a Mac except for emulating MagiC on it and maybe run a few Mac apps that have no Atari equivalent. So what's the point in debating whether an Alpha or a PowerMac is better value for money? Will any of you ever actually buy an Alpha? And if so, which OS are you going to run? Windoze NT? Unix? Any of these a real alternative to either MacOS or MagiC? I think not.

So, if you are happy with your Mac, congratulations. If you are happy with your Atari, ditto... and let me call you 'brother'. ;-)))
If you are happy with anything else, well, why shouldn't you? You're quite an intelligent person too, I assume, and you won't have bought anything tht doesn't suit your needs.

But why can't you all just be in peace with the knowledge that there are people out there who had their reasons to buy something else?
Oh, yeah, sure, this is advocacy, I forgot. Well, it feels like war, or kindergarten, or soul asylum to me. Anything has its advantages, even Windoze does. And anything has its master... so don't make computers

a religion, what do you say?

Yours,
Erik.

Very unbiased source versus, say, a recent marketing study commissioned by a major Boston firm that I have contact with. In short, use of proprietary, non-open standards shuts out a huge portion of the Internet userbase, which is why NO advertising or marketing firm worth its druthers encourages sites to use proprietary technology to the point of completely shutting out the users. Percentages are nice, but if even 1% of Internet users were shut out due to non-HTML-compliant pages, that would exclude at least 300,000 potential users from seeing your page, and 300,000 potential customers from reading yout materials.

AHAHAHA! What's this, Peter? Join the Revolution! Spread the good word
about Apple computers! Advocate Apple computers in whatever you do!
Join the cause!

ROTFLMAO! This sure sounds like the "Atari Revolution" of 1990.
Heh heh, Apple's path continues to follow the same path Atari
followed back in the early 1990's... a path which leads to oblivion!

HAHA!  Denial, Peter... classic denial.  You still are a worthless amoeba
and your delusions are innumerable.

Apple 1996 = Atari 1990

Apple X = Atari 1996 (death)

The only thing left in doubt is the exact value of X.  1998?  1999?
Or even sooner?

:   I wouldn't want to venture a guess to the number or
:   percentage of people using Lynx, but here at Nyx there
:   are well over 5,000 user accounts (if not more) and
:   we use Lynx. How many public access unix sites are
:   there like Nyx? How many freenets? How many other
:   unix shell account providers?

I know here at CRL, we have well over 4,500 users (exactly 4699 from a wc -l on /etc/passwd, but that includes non-user "users").

Plus, extending on something you mentioned in another of your articles, the whole San Francisco Public Library system is hooked up to the Internet and provides Lynx. You can dial in or use one of the many terminals they have at the various branches of the library (at least four or five in each branch (at least 50 at the Main), and there's 27 branches plus four Children's Rooms which also have 4 or 5 terminals) and access Lynx through there. (it's actually fun to plug in a URL to telnet to your ISP... They unknowingly (apparently) provide a telnet service. :)

Brian-Roland Miller <brimiller@delphi.com> writes:

>Look out Intel and Apple - Be is coming!

Thought you might be interested to know (this is not advocacy) that Be
is porting their operating system to the PowerMac. The next major
release will run on 603e and 604 PCI Macs. That means that we can
forget Be's 120MHz 603es and get a PowerComputing box with a 240MHz 604e.

[This is a draft version of an RFD intended to be posted to
news.announce.newgroups soon. It is being posted to the comp.sys.atari
groups for feedback before the final submission to David C. Lawrence,
the news.announce.newgroups moderator. Please give us your thoughts on
this proposal. Thank you. --KRH]

REQUEST FOR DISCUSSION (RFD)
moderated group comp.binaries.atari
unmoderated group comp.binaries.atari.discuss

Newsgroup line:
```
comp.binaries.atari     Binaries for Atari computers. (Moderated)
comp.binaries.atari.discuss Discussion of content of c.b.a.
```

Proponent: Rich Tietjens <starship@3rdplanet.com>
Proponent: Kyle R. Hofmann <rhofmann@crl.com>
Proponent: Adam B. Roach <adam.roach@exu.ericsson.se>

This is a formal Request For Discussion (RFD) for the creation of world-wide moderated Usenet newsgroup comp.binaries.atari, and unmoderated comp.binaries.atari.discuss. This is not a Call for Votes (CFV); you cannot vote at this time. Procedural details are below.

RATIONALE: comp.binaries.atari

Currently, there exists no appropriate and easily accessible medium for the release of Atari software. There is also a growing pool of software available for these machines which would recieve a marginal distribution at best due to this lack of a medium. Though FTP sites and several binaries newsgroups (alt.binaries.comp.atari8bit and alt.binaries.atari) exist, many Atarians do not have FTP access and the alt groups have a poor distribution.

By creating comp.binaries.atari, a medium would be established. comp.binaries.atari would provide a method of distribution. With c.b.a, the immediate dissemination of new releases and bug fixes would be possible.

This method also has the advantages of using comparatively fewer system resources than other methods, and of keeping binaries out of existing comp.sys.atari.* discussion groups.

END RATIONALE.

RATIONALE: comp.binaries.atari.discuss

The existence of a .discuss group allows the discussion of the binaries groups to stay separate from the actual binaries postings and from non-binary related postings. Without a discussion group, non binary posts related to the topic of the binaries heirarchy have no single place in which they can be discussed; instead, they are spread around a heirarchy of newsgroups, making worthwhile discussion difficult, if not impossible. This discussion group will create a proper place for discussion and comments on binary software posted in the comp.binaries.atari.* heirarchy.

END RATIONALE.

CHARTER: comp.binaries.atari

For the distribution of Atari compatible or Atari related software. This includes bugfixes, updates, and new releases to Atari computer software and software on other platforms related to Atari computers (such as emulators, disk image maintainers, and Atari to PC communication software). Software that has been posted within the last 60 days will be rejected; no reposts will be made within that time period. Non-binary or non-software submissions will be rejected.

The moderator will cancel any post which has been posted with a forged approval header.

Specific examples of allowed software include:

- Freely distributable software
- Revisions of previously released software
- Bugfixes of previously released software
- Commercial software with the explicit permission of the copyright holder

Specific examples of disallowed software include:

- Pictures, music, and other non-software binaries
- Recently posted software (posted within the last 60 days)
- "WaReZ", pirate software posted illegally without the copyright holder's permission
- Discussion of software posted to comp.binaries.atari
- Requests for software
- Reposts of software previously posted

END CHARTER.

CHARTER: comp.binaries.atari.discuss

This group is for the discussion of binaries posted to the group comp.binaries.atari. On topic posts include:

- Asking for alternate methods of distribution for a binary
- Discussion of the relative merits of a particular binary in comparison to competing packages
- Requests for a piece of software which has not been posted recently
- Requests for a piece of software which was incomplete to be mailed

Binaries, spams, MAKE.MONEY.FAST schemes, computer advocacy, and discussion not pertaining to the comp.binaries.atari groups is considered off topic.

END CHARTER.

MODERATOR INFO: comp.binaries.atari

Moderator: starship@3rdplanet.com (Rich Tietjens)
Backup moderator: rhofmann@crl.com (Kyle R. Hofmann)
Submission address: starship@3rdplanet.com

The moderator is author of a number of freeware packages for the TOS compatibles, active in the various Atari discussion groups, several fido-technology networks, and is employed in the networking industry.

END MODERATOR INFO.

PROCEDURE:

The discussion period lasts 21 days from the initial post of this RFD. If there are no major objections to the naming or placement, then the CFV (Call For Votes) will be issued, lasting for at least 22 days. Following the vote, there is a 5 day discussion period after which newsgroups that passed will be newgrouped by the moderator of news.announce.newgroups.

Followups to this post are directed to news.groups, which is where further discussion will take place. Cross-posted followups are discouraged. Please read news.groups to participate. Thank you!

DISTRIBUTION:

This RFD has been crossposted to:

news.announce.newgroups, news.groups, comp.sys.atari.8bit, comp.sys.atari.advocacy, comp.sys.atari.st, comp.sys.atari.st.tech, comp.sys.atari.programmer

In article <4uq0mc$5tl@lex.zippo.com>, JEDI writes:

> > Thats interesting, didn't Apple produced a 128k OS/GUI. As the time progressed
> > Apple added features and functionality while the Atari OS stagnated. Not
> > impressive at all.
>
> Apple never produced a compact OS. They managed to squeeze some of
> it into system ROM but, system was always disk based and LARGE.

Depends on your diffinition and opinion. Not fact. Also Apple has advanced the OS far more than the other OS. Thats the fact Jack!

> The ST also does quite a bit more. Furthermore, what 'bloat' the ST
> does have is not a hinderance to the user. Even the most basic ST
> can be quite productive. The OS doesn't get in the way and eat up

> half or more of the system's resources and performance.
>
> Despite being a relic, an ST can more completely take advantage of its feature set than newer more powerful machines.

More Jabba speak. The OS doesn't do much. Were are the equivelant Mac/Windows apps. Were are the equivealnt Mac/Pentium hardware at lower prices to boot?

Considering that Mac/Pentium systems come standard with more than enough resources to boot, your asertion that the OS gets in the way (what ever that means) is a fallacy.

> These aren't features. These are advertising buzzwords. They don't get any work done. They are useless to anyone but mindless clones like yourself.

Advertising buzzwords? AtariWorks 1.0 is the same AtariWorks 1.0 when released four or more years ago. So I am going to depend on a app that will never be improved upon from the remaining four employese at Atari? You would make for a lousy entrepreneur who is a afraid of change and progress.

> No VM for Nisus under 8M? I highly doubt that. Those box specs do tend to be so understated on Mac's/PC's. Is this experience talking or just more hot air.

No jabba, you are a blow hard of hot air..

> Furthermore, if it does need 8M all to itself and it will in fact start swapping out pages if you run anything else than, your precious Nisus has effectively turned your powermac into a FatMac or ST.

Nissus does not need all 8 megs to run. I see you do not include the others I have listed.

> For if any serious apps nullify the usable multitasking aspects of your OS, you might as well be running an ST.

What ST? None are being sold unless you are referring to the expensive FALCON AND THE ANTIQUATED $3000 040 Hades. I'd rather save money.

> ...and you've still yet to state one REAL feature that any of these have that any of US would want or need, let alone something that we may not be able to get with our own wares...

Depends what you want to use..The latest productivity apps, multimedia apps, web browswers/internet and games!

> Atarians dont need any corporate hand holding.
> CD support is there. Your denial of it is just another one of your great lies.

Corporate hand holding? Sounds like sour grapes! My lies? What are they Jabba?

>
> Regarding retail prescence: this damns Macs MORE than it does STs.
> Just ask your more substantial rivals, the one's you are too
> cowardly to confront.

Confront? I use both Pentium and PowerMac at work.

Lowering the price is fraud? I call it a windfall for the consumers. Not use
to spending less for hardware are you? I guess saving money is slimy.

Still $200.

>
```

Are you fucked in the head? As I stated that the Cyrix 586/133 is a good alternative to a Pentium 90 and 100 due to speed and cost. You can put a nice system together for about $600-$800!

```
>>In what way?  And how very likely?  Or is this Jabba speak?
>

>                perform the same as your so called Cyrix 586.
```

And performs comparably to a Pentium 90 and 100! What is your point?

```
>                They actually sell such beasties. They are
>                called AMD 586/133's. These are just fast
>                486's; this is common knowledge in the field.
```

And costs less than their Pentium counterparts.

```
>
>                Mind you, this is all according to the CPU
>                performance specs you gave. They are quite
>                likely bogus.
```

Prove it Sherlock!

```
>      Cyrix in general is something to be avoided becuase they
>      are a little TOO cheap. Stick with AMD (same price & perf.).
>      Cyrix is notorious for incomplete implementations (personal
>      experience) and misleading labeling.
```

Now you state that Cyrix needs to be avoided because they are a little to cheap? According to Industry opinionaters that Cyrix is awesome that is their chips and 686 motherboards.

SOUNDS like you like to spend more for less.

```

You're talking out of your butt again.  The overhead to run Mac and Windoze
apps is quite large- in fact, much more overhead is needed with those
platforms versus the ST and Amiga.  MacOs and Windoze apps
require high amounts of memory, vast volumes of disk space, etc.
```

>Considering that Mac/Pentium systems come standard with more than enough

Look who's talking! You can't even admit that Apple is going down the
tubes! Their market share dropped from 7+% to 5% in the last 8 months!
In 1990, Atari had 4.5% of the computer market in North America and
a MUCH BIGGER share in Europe. Market-wise, Apple is in worse shape than
Atari was in 1990!

>>   Regarding retail prescence: this damns Macs MORE than it does STs.

What's with this "Wintel" bullshit?  That is an incorrect labelling of
the market, moron.  I use Linux on my Intel machine (which, BTW, makes
Windoze and MacCrapOS look like child's play).  So what do you call
my machine, Peter?  "Lintel"?

Well, you turned this back into advocacy so... PowerComputing has stated that they will continue to bundle their computers with MacOS so Apple still gets the profits from that. PowerComputing still buys their motherboards from Apple so Apple will still get profits from that.
Also, Apple's single processor is faster than both of the Be's processors.
Apple has been releasing a lot of technical data lately and they are moving towards PPCP which does not make them closed. Bes right now run only on propriety hardware (Be's own hardware, not PPCP), Apple's current hardware is superior to Be's hardware and you can get a Mac clone for cheaper than a BeBox.

The fact is that Macs are good machines. Many Mac users are perfectly intelligent people. The problem here is not the Mac, it's not the Falcon, and it's not actually anything to do with /any/ computer. The problem is Peter Sinclair-Day, who knows nothing about anything but thinks he knows everything about everything (I understand the situation, ahving outgrown that syndrome some twenty years ago myself. Yes, there are many topics upon which I cannot converse intelligently. Computers, however, is not among those). If the people who actually have and use Macs were to compare notes with the people who actually have and use Atari systems, we would find that we have much in common - including a perfectly realistic disregard for MS dozzzzze and for loud-mouthed bratty smartasses who get by at the university on Daddy's money and MacWorld's opinions (as presented in the adverts by Madison Avenue).

And that's the news...

Yes - this takes the last profit center for Apple (sales of the Mac OS) and makes them redundant. It also provides a way out to a superior platform

for Mac users who want something better. Thus, people move from a single
processor, proprietary, closed, limited, expensive Mac to an excellent,
affordable, open BeBox.

: >

: Are you fucked in the head?

No, you are.

: As I stated that the Cyrix 586/133 is a good alternative to a Pentium
: 90 and 100 due to speed and cost. You can put a nice system together
: for about $600-$800!

This coming from the person who couldn't care less about PCs. Really.
The truth is that Cyrix makes inferior chips. The floating point
processor on the Cyrix 686, for example, is complete crap, even by PC
standards. The 586 isn't even a Pentium, so don't compare it to one.

: >>In what way? And how very likely? Or is this Jabba speak?
: >
: >   Very slowly once again for the anacaleptic:
: >   Overclock a 486DX4/100 to 133Mhz and it will
: >   perform the same as your so called Cyrix 586.

: And performs comparably to a Pentium 90 and 100! What is your point?

That the 586 is actually a 486, and 486s don't perform comparably to
Pentiums.

: >   They actually sell such beasties. They are
: >   called AMD 586/133's. These are just fast
: >   486's; this is common knowledge in the field.

: And costs less than their Pentium counterparts.

And are rightfully inferior.

: >   Cyrix in general is something to be avoided becuase they
: >   are a little TOO cheap. Stick with AMD (same price & perf.).
: >   Cyrix is notorious for incomplete implementations (personal
: >   experience) and misleading labeling.

: Now you state that Cyrix needs to be avoided because they are a little to
: cheap?

I'll agree to that. Too cheap, in this case, means they don't pay their engineers enough.

: According to Industry opinionaters that Cyrix is awesome that is their
: chips and 686 motherboards.

First of all, WTF are "Industry opinionaters"? Second, Cyrix is not "awesome". Try comparing a Cyrix 686 133mhz to a Pentium 133mhz using real world applications. For example, have 3d Studio render the same scene on both computers. Play a game such as id Software's Quake. Recompile GCC. All of those are time consuming tasks (especially the second >:-) which depend heavily on the speed of the processor. BTW, make sure you chip swap instead of getting two identically configured computers.

: SOUNDS like you like to spend more for less.

BZZT Wrong!

Nisus doesn't have all 8 megs to run in. Nisus only has what is left over after the OS has finished with the machine.

Until you address ONE program. My addressing the others is really quite pointless.

So, now I shall be a bit more blunt: Do you actually have experience with these applications or personally know someone who has. Otherwise, you are the one just spouting hot air.

So? What specific thing that these have that we either want or need and cannot get from our current wares.

You still seem unwilling to mention a single feature that these 'new and improved' wares have that we cannot get already. Since you seem so unwilling to provide them, it is difficult for anyone to conclude that these 'essential features' actually exist.

     Atari's support both SCSI and ATA cdrom drives. You would have the world
believe differently. You would MISLEAD people by only mentioning the support
of Atari and ignoring any 3rd parties. You're comments about AtariCorp are
probably also wrong.

Interesting...I just read that it was 6.9%... However in their key markets, much higher. I don't see SUN and SGI showing up in the overall score. However, both do well in their tended markets.

Hard to believe Atari had marketshare at all in NA...What about USA?

Moving to Intel? Always been an Intel shop at least in the library departments. However, in the academic colleges, different scene.

The Apple campus reseller more than doubled Mac sales so far this year.

 g> It's today now. Wake up.

Actually, I have a couple of machines at work that have 512 megs of RAM. Pentium Pro multi-processors - yep, they're fast, all right. I think the less expensive model comes with 64 megs RAM and no hard drive for only 50 kilobucks.

Of course, they aren't much good for MIDI, but man, can they search-and-replace in MS Word. <EVIL GRIN>

I worked at Netscape tech support before coming over to Intel. Netscape is used by an estimated 80 percent of /graphical/ web browser users. There is still a user base of roughly 30% on the Internet who do not have graphical access; they use Lynx.

So? Just which Macintosh (or even Apple for that matter) shipped with an OS compact enough that it could be shipped as system ROM ONLY?

You could concede a small point, and move on, but you're too stupid.

>>the OS far more than the other OS. Thats the fact Jack!

This is an interesting bit of FUD considering where you are. For the vast majority of the planet who are now fixated on Mac vs. PC that might fly. However, we know better.

We know that instead of it being PC vs. Mac, it was indeed

PC vs. EVERYBODY. In the mid 80's, even unix was pushing the UI envelope. Apple was not some lone vanguard. Microsponge was the lone holdout unable to deliver a viable GUI.

Apple made a nice shell but, it's OS is still primitive and has yet to surpass OS'es decades older than itself.

Of course GEM had to sacrifice some functionality. This is an engineering decision. The system software was designed to be appropriate to the hardware it was operating on. Considering that it created a machine that was at that time a third the price of a cheap 8088 clone and as usable as a Mac and only marginally less usable than a contemporary clone, it was an effective tradeoff.

>
>"the other OS" - what other OS are you talking about?

That other OS that all the Cloners used instead of DR DOS and GEM...

>
>>>   Despite being a relic, an ST can more completely take advantage of
>>>   its feature set than newer more powerful machines.
>
>>More Jabba speak. The OS doesn't do much. Were are the equivelant Mac/Windows

The OS shouldn't do much. The rest is for applications.

>>apps. Were are the equivealnt Mac/Pentium hardware at lower prices to boot?

What do your banner apps have that we need? You have yet to show us this. Since you are unwilling to do so, as doing so would expose how really uninovative those wares are, we must assume that there would be no advantage had by using them.

Our apps don't need Mac/Pentium class hardware to operate.

>
>You're talking out of your butt again. The overhead to run Mac and Windoze
>apps is quite large- in fact, much more overhead is needed with those

So true. So true. With what the Mac and PC's waste, an ST user could run quite comfortably and productively.

>platforms versus the ST and Amiga. MacOs and Windoze apps
>require high amounts of memory, vast volumes of disk space, etc.
>
>>Considering that Mac/Pentium systems come standard with more than enough
>>resources to boot, your asertion that the OS gets in the way (what ever that
>>means) is a fallacy.

Computer users do more with their machines than merely turn them on. If a user cannot load one of your wunder-apps without bogging down the machine and turning it into a MacPlus, then it has little more value than a MacPlus. If you can't load two of those wunder-apps at once without slowling the system down to MacPlus speed, then it has little more value than any Mac with System6.

This is not a fallacy. This is personal experience of mine and many other Mac/PC victims.

>>improved from the remaining four employese at Atari? You would make for a
>>lousy entrepreneur who is a afraid of change and progress.

I am not an entrepeneur, therefore your comment is not germane. I , however, am a consumer. Like many consumers, I have many choices vieing for my time and money. Instead of wasting money on the hardware race or software that does not suit my needs any better than last year's (or decades) software, I'll be cruising through the Bahammas next week.

Enjoy your overpriced plastic box.

So? If it isn't broken don't fix it. Name some extra feature which
would be useful and you might score a point but seeing as you've
probably never even looked at an Atari machine for years it's not
```

likely you've ever seen it in action.

He didn't say go buy one. His point was that rather than waste his money on a more expensive machine that does nothing more he would rather keep the able machine that he has. If you "might as well be using [something]" then it means pretty much "the same as" so why on earth would you even think about buying something that does the same?

You really don't understand do you? You said "latest" again, just because you've never experienced a product thats not crap or buggy for it's first many incrnations does not mean that they do not exist. Games I admit is one big letdown on the Atari scene but as I have a Playstation that does stuff better than most macs and has a far better selectiont than the Mac then it doesn't bother me.

Is it possible to just use comp.sys.atari.st to discuss stuff in
comp.binaries.atari? Why create comp.binaries.atari.discuss? I know I
won't go looking for something in c.b.a. unless I read about it in
c.s.a.st as I don't intend to poke my nose in there if I can help it.
Also, does it have to be moderated? Seems like that was the cause of

problems before. And then, of course, comes the issue of: do we really need this. Right now I'd say we do, primarily because there is no satisfactory ftp site. I wish we could set up a really nice network of ftp sites (one in US, one in UK, one in Germany, France, etc...) that all mirrored the complete archive. U-Mich used to do this, but seems to have gone all rough around the edges.

These people are quite wrong. There are those who need, want and deserve the full graphics treatment. The trend in my circles (journalism) is to teach getting the textual information first, and THEN deciding if the visual information is necesssary.

As the Web grows and gets more complex, there will be more and more necessity for Web designers to do (a) index/ search programs (b) quick-summary text ability (c) visual information and (d) finally --

audio.

    Lynx is routinely taught in journalism courses as the preferred search tool. For starters, you can use it with cheapest old machine in the world.   And the information is the same whether you found it with a Sinclair Spectrum as with a DEC Alpha.

As it stands, there currently is no repository that I am aware of that supports pictures or music files. I collected the 8-bit Atari .MOD music files, and would like to be able to trade and/or collect more titles. As far as I know, there are no copyright restrictions on the MOD and related music files because they were generally released anonymously.

A blanket prohibition on all music files to be overly restrictive. The music and picture files specific to the Atari 8-bit computers are small, hard to find, and tradeable. I would like to see them allowed. This request does not extend to .jpeg, .gif or other modern formats, nor to material that is already prohibitted from the Internet.

Please modify the proposal to allow music and picture files specific to the Atari 8-bit computer to be posted.

> not "good".

Now its 32 megs ram..Make up your mind.. You have two choices.

1. Spend $50 for ram doubler 2...Total of 48 megs!

2. Spend $110 for 16 megs...

Still come out a head..

> How'd you connect a Centronics printer? Buy a new one?

Don't need to, use a laser.. Still using a Dot matrix?

>>Because I own a Sony, and there wasn't a bundled adaptor inside the

I am sure they do..Considering the apps are not on par..

500 megs is low today. As I stated that the mac in question was
yesterdays..

> Petey-boy, YOU wanted to tell us that 500 meg HD space is sufficient,
> because YOU wanted to advocate closeout hardware (to be precise: the
> 7200/75 model PowerMac). Next time you want to fool anyone into believing

Thorston-boy...The 7200/75 are all gone now. The ones who purchased them knew
that it came with 500 megs.

>>I have seen yesterday Pentiums with
>>500 megs..

> It's today now. Wake up.

I have seen today's, yesterday Pentiums 60 at Wal-Mart the other day as
closeouts...

As I understand, PowerComputing is licensing the Mac OS and the Mac motherboard designs and giving Apple royalties on each machine sold. According to the pundits Mac clones will sell over 300,000 units this year and exceed a million in '97'...

The Mac is a closed limited, expensive platform like the ST?

> ---
> Ain't life grand? :')

Sure is...With more choices everyday and lower prices to boot. When the Be OS ships, high powered Mac clones will hit the $1000 price point, not crippled ones...
Ain't life grand..

Only Atari....pay more for less.

: Currently, there exists no appropriate and easily accessible medium
: for the release of Atari software. There is also a growing pool of
: software available for these machines which would recieve a
: marginal distribution at best due to this lack of a medium.
: Though FTP sites and several binaries newsgroups
: (alt.binaries.comp.atari8bit and alt.binaries.atari) exist, many
: Atarians do not have FTP access and the alt groups have a poor
: distribution.

You need to specify what kind of Atari software is going to be on here
(8-bit, ST, TT, Falcon, whatever). Seems one user seems to think this is
for ST stuff. I'm not even sure what format this is going to be for, myself.

And if this is for 8-bit, there's already an 8-bit binaries group that
doesn't get wide distribution.

Mail order. . . same argument used by ST users in 1993. . . three years
before the end of Atari (if not TOS itself).
---
Got any MAJOR RETAIL chains, easily accessible from, say, a small town like
Boston, MA  <sarcasm> that will sell me a powerful, entry-level Mac NEW and
STILL PRODUCED for under $2K?  I've looked hard - I'm still looking.
-
But I know wwhere to buy a fully decked Falcon with superior DSP for over
$500 BELOW the required minimum.  It looks better, works better, and is cheaper
to boot!

I completely agree. I remember having an extensive collection of Atari
art and certainly would like to see all that be back in circulation.
There were BBS's with literally hundreds of original art and musical
items. Where are they now?

You like parroting this remark but, you never manage to support them.
It really doesn't matter if they are in fact 'below par'. That they
get the job done is all that is relevant.

Oddly enough, you ignored a prime opportunity to show the value of
a Mac. There was a user in 'that other group' that you troll in that
was in some distress. It seems that he couldn't do a particular task
in the manner in which he desired. Oddly enough, you and your mac
apps were either unwilling or unable to come to the rescue.

So much for being 'above par'...

Some "clone" - requiring the "clone" maker to buy motherboards from Apple! What's the difference, the case?

>Also, Apple's single processor is faster than both of the Be's processors.

But is pulled down to sluggish levels by Apple's clunky OS. Not to mention all the type-11 errors.

>Apple has been releasing a lot of technical data lately and they are
>moving towards PPCP which does not make them closed. Bes right now run only

Question 1: Can I run Windoze on a Mac?
-
Question 2: Can I make my own OS on the Mac without having Apple release any information to me?
-
Seems closed to me.

>moving towards PPCP which does not make them closed. Bes right now run only
>on propriety hardware (Be's own hardware, not PPCP), Apple's current

Wrong - Be adheres fully to the CHRP "standard" which Apple claimed to be its future strategy for open computing. Then they trashed it to go with "PPCP." Noone is yet making any PPCP boxes that can run MacOS. My bet is that an interested entrepreneur could begin cloning BeBoxes tomorrow - Be would be thrilled with the extra sales.
-
Be is far more open than Apple is. . . and "wait until tomorrow" sounds like a litany of phrases I'd expect to hear at the Republicrat National Convention (s), not from a computer maker near death.

I have the following 8-bit equipment for sale, all is in good working order, but I don't have any of the docs or boxes....

Atari 800XL with 256k RAMBO Upgrade
Atari 1200XL (stock)
Atari 800 (48k)

Atari XF551 Disk Drive - One of the molex connectors shorts every once in a while, probably due to age.

Atari SX212 Modem

Interested parties just make an offer, I want to get rid of this stuff prior to moving later this month. Just respond here in the newsgroup or send me mail to bfurbee@tcac.com

Thanks,
  Brian

That is an understatement. The whole point of the new binary group would
be to give it wider distribution. Very few of the ISPs in my area, and
none of the universities I've heard of accept alt.binary- anything.

I expect the new binary group to allow both 8-bit and ST stuff, although
I am only interested in the 8-bit.

Believe it or not, the basis of the Internet is /not/ Windozzzze systems.
Internet is built around Unix, and more than half of the Unix systems in
the Internet still don't run X or any other form of GUI; those systems
/require/ Lynx to browse the Web.

Netscape's claim is that 80% of the /graphical/ browsers in use are
Netscape. That's probably more-or-less an accurate claim. It doesn't take
the non-graphical-only access systems into consideration, however.

As for where I get the numbers - take a look at the domain listings at
Internic. Of the .edu and .ac.* domains listed, along with many freenets,
you'll find most of them don't offer GUIs at all.

Lowry, illuminate me: What Web server software runs on an Apple? I'd never dispute that the Mac excels in graphics applications (though I'd certainly take issue on the MIDI front - all the professional musicians I know personally prefer the Atari for MIDI), but I remain blissfully unaware of any server software for the Mac; it is difficult and expensive to interface to 100 Mbps networks because it requires proprietary interface cards and protocols (AppleTalk /is/ proprietary, you know). Thus most servers run under Unix, many under Novell, some under NT... I can't recall ever seeing one running under System 7.x at all.

In order for the RFD to stand any chance whatsoever of passing, a comp.binaries group must be moderated. This is one of those unwritten laws one hears so much about. <G> For those who prefer an unmoderated venue, alt.binaries.atari has been newgrouped (several times) and, while distribution is spotty, is available from many sites. I can personally assure you that the moderation this time 'round will be responsive and active.

The discussion group, while not strictly necessary, (of course, the whole Internet is "not strictly necessary") will help to segregate the "why didn't my cracked copy of Lemmings get posted?" from "who has a good routine to read the system clock?" and thus relieve clutter in c.s.a.* (at least, that's the plan).

As for ftp sites, all I can say is, "wait until next year."

Hmmm, as long as we still prohibit MOD files (which do have an appropriate
venue for distirbution), I think we might consider Atari-specific files.
Technically, the "chip music" files for both the 8-bit and ST series
probably could be considered binaries in that they are obviously not
graphics nor text, and they aren't useful on any other platform.

8-bit graphics files are so tiny (<=8K as I recall) that I don't have a
problem with that, either. ST-resolution graphics would have to be pretty
special to qualify, though; 32k isn't huge but it's big enough to be a
nuisance if a lot of them are posted, and frankly, while I love the

systems, I am underwhelmed with most of the graphics that have been produced for it. This is a case where I think http distribution does make more sense.

Kyle, your opinion, please?

>would be thrilled with the extra sales.

No, they do not. They state this explicity on their web page. Their hope
was that the differences between CHRP (which was not finalized when
the Be released) and the Be hardware would be small enough that
CHRP OSes would run anyway.

(Maffia wants 8-bit sound and graphics files allowed in proposed comp.sys.atari.binaries. Tietjens says maybe ok or something.) I'm opposed to sound files and picture files, but really don't care. I could see the binaries group get a bunch of tiny picture and sound files. Hmmmm... I go to the midi binaries group sometimes, it is a mish-mash of requests and binaries. Sorta a prototype for the proposed atari. binaries. Except Tietjens and Hofmann are looking for more 'discipline' . Maffia wants to trade these rather rare formats of sound and picture files. He probably has more of them than anyone else, he's a rare bird that likes that type of stuff. A simple post in csa8 might find out for him if there's anybody else that likes the same type of stuff. I like the original idea to exclude picture and sound binaries, just have program files.

Nope, you are mixing up RAM Doubler and Syncronys' "SoftRAM" (the latter one is the fraud). RAM Doubler tries to reduce MacOS' wasting of expensive RAM. What Petey-boy advocates is software that gives you 24 megs when you _have_ 24 megs. He - of course - is accustomed to MacOS' behaviour to allocate a static amount of RAM for any started application and to chunk it until the whole machine is unusable, which goes like this:

Start Photoshop, then Quark and Illustrator, 32 megs used. The Finder won't open any further windows. Quit Photoshop (20 megs less used), the Finder won't open a window, quit Quark and Illustrator, the Finder won't open a window, reboot the Mac.

True, far superior to "other OS".

Thorsten

I was sloppy. I meant TOS.. Back in the early days of the Mac, users were not using mass storage and most were using the internal floppy for loading apps and saving data. Some used a second floppy for data saving. Over the years when apps were available in their fifth and or tenth update, HD became necessary and dropping in prices. Also the OS was being updated with new components and grew in size. Just because TOS has remain basically the same doesn't mean its better.

>   Apple made a nice shell but, it's OS is still primitive and has yet
>   to surpass OS'es decades older than itself.

Just like TOS being primitive?

>

The ST was a bargain in its time. However, the world did no know(or cared?), the Tramiels failed to update in a timely fashion and Atari's inability to promote the message.

>>>>   Despite being a relic, an ST can more completely take advantage of
>>>>   its feature set than newer more powerful machines.

Probably true because TOS has not been updated to take advantage of new hardware.

>>>More Jabba speak. The OS doesn't do much. Were are the equivelant Mac/Windows
>
>   The OS shouldn't do much. The rest is for applications.

Considering that Live Objects(open doc) will be integrated in Melody, the next system release, smaller apps can be developed at an increased rate.

>>>apps. Were are the equivealnt Mac/Pentium hardware at lower prices to boot?

Currently I use WordPerfect. Will be using MS PowerPoint for projects in the comming months. I also use Netscape and begginning to use Cybordog which is tied to Live Objects.

>
>   Our apps don't need Mac/Pentium class hardware to operate.
>

True. Using Old apps doesn't require new Hardware. My personal machine is a Quadra class PowerBook 520 and is fine for now. I may upgrade to the PB 190CS because of the 10' color screen for PowerPoint considering the price is only $977...

I hate to reign or burst the bubble...Currently shipping PowerMacs/Pentiums are shipping with more than enough resources to run apps and at a much lower price than a Falcon system to boot.

>

Thats interesting...I use MS Office and Netscape at the same time at work. I don't see any bogging dowm. However, I use a Powermac 7200/90 and Pentium 100. I don't know were you get this Mac Plus speeds..

Yes...When I use new hardware, I would expect the apps to be optomized for it.
When
Claris incorporates Live Objects in ClarisWorks 5, yea I want to have that
option to upgrade.

Financialy wise Apple is in much better shape than Atari ever had been. Hard to
believe that Atari showed up in any market share charts at all in NA. I suppose
Canada was being milked but the U.S. was dismal.

However, Apple has rebounded back and the Mac clones are doing very well. I just
hope that new Epic Powerbook will be a new chapter of stability.

He he he. Atari's computer business has been dead in the U.S. since 1985. I
still am amused in what ST users state and defend..

Yep and it failed miserably to the imcompetence of the Tramiels and Atari's lack
of senior execs! Have you told MacWareHouse, MacCoonection, MacZone, MacClub,
MacMall and CDW that the mac mailorder industry has failed?

Powermacs do support SVGA monitors, but you need a adaptor. People who by
Powermacs will most likely buy the monitor at the same time and will most likely
come with an adaptor. Whats the problem?

>
>   I suppose that Sony will send one of these to you for free out of the

>   interfaces. This is Apple's problem as much as it was Atari's.

I don't see the problem. Maybe it is different in Germany(?), So why did you
not buy an Apple monitor or a third party monitor that came with an adaptor?

You knew that Sony did not include the adaptor but you purchased anyways along with the Mac. Why is it Apple's fault?

And 500 megs gets the job for many people. My Powerbook has only a 240 megs. I have WP, telecom app, ClarisWorks, MacPublisher and more. I still have 180 megs left.

>
>   Here you have it folks: the great liar admits to practicing vapourware.

What do you expect? That the 7200/75 remain in the warehouse with such a great price for many people and not be sold out...

PowerComputing through the Usergroup Connection(ugstore.com) is closing out the PowerCenter 120 for $1525. PowerCenter 120 uses a 120mhz PPC 604 and includes 16 megs ram, 1gig HD, keyboard and software bundle. Has more than enough resources out of the box. Still cheaper than the Falcon to boot!

```

Thought I'd just like to comment on Peter's spew about Apple's price/performance ratio and how cheap Macs are.

Yesterday I glanced through the latest CompUSA advertisement. 6 pages of PC ads, 1/3 of a page of Mac ads. Check out what system they had "for sale":

PowerMac 120mhz (I don't remember exact processor, though)
1.2 gig hard drive
4X CDROM
16 meg RAM
MacOS 7.5 (whoopee)
A couple of bundled apps/multimedia titles

Monitor sold separately. Keyboard sold separately. No modem.

Price: $2799.

Do you want some salt and pepper to go with that foot, Peter? No wonder Apple's marketshare is dropping faster than a rock! Any customer would choke at that price with limited extras (no keyboard, for cryin' out loud!!!) And no matter what you say, Peter, retail exposure makes 1st impressions. Not some obscure mail-order joint.

Read it and weep, Peter. This is the stuff being advertised at the retail level. No wonder Apple is in such bad shape.

Just thought I'd give you this little dose of reality, Pete. I know you can only handle it in teeny tiny doses, so you may not understand this one.

/Kevin

OK, I admit I'm a little bit interested. I mean, after all, Peter Sinclair-Day admits he has no recent experience with Atari computers, and to judge from what he knows of them, he has never owned one. Why, then, are the vast preponderence of his Usenet postings in the Atari newsgroups? He doesn't own an Amiga, either, as far as one can tell from his postings, but the Amigans are the next-largest "beneficiaries" of Peter's peculiar brand of wisdom. Here's a quick summary: Of a total of 1859 articles posted by sinclap between March 29, 1995 and this past Saturday (August 17, 1996), he has posted 1181 (that's almost 64 percent) in Atari newsgroups, and 364 (almost another 20 percent) in the Amiga groups. Only 140 messages - less than 8 percent - were posted in Mac-specific newsgroups. This adds up to over 80 percent of his Usenet time being devoted to attacking the users of other computers, rather than being spent joyfully in using the system he has chosen for himself? What drives a man to do such self-defeating things? Is he so unpopular that the other Mac users won't talk to him either?

I really dont' understand the mentality that says "I chose X brand, and you didn't, so you must be an idiot." If Nike paid me what they pay the pro athletes to wear their shoes, I might be inclined to go recruit other people to wear Nikes - but otherwise, brand loyalty simply for the sake of brand loyalty seems rather stupid to me. Certainly trying to convert people by insulting them (either directly, or insulting their intelligence with transparent lies) wouldn't be the path I would choose in that case, however.

I chose an Atari computer because I like the hardware/price/performance; I certainly don't much like what Jack Tramiel and family did either to the company or to the customers. If money were no object, and it were easy to change operating systems, I'd love to have a brand-new Mac; I'd like to have a nice shiny Amiga for the places where it excels, also (need I say "toaster" more than once?). I did have an Amiga for about 6 months, but at the time, I couldn't afford the upkeep on two systems, and I was running my BBS and writing software on the Atari, so the Amiga had to go. Those of us who are using Motorola-based computers have far more in common with each other than we do with Bill Gates and his legion of drones (although the chips themselves are perectly fine; installing MS-Windozzzze on any system is like hitching a thoroughbred to a hard-scrabble plow). So why would anyone waste all of his time (OK, only 80-plus perrcent of it) trying to irritate other users, instead of learning everything he could about /his/ system, so he could use it better? It's a puzzle.

Anyhow... Here's the Deja News user profile on our resident gadfly.

: :
: :   REQUEST FOR DISCUSSION (RFD)
: :   moderated group comp.binaries.atari
: :   unmoderated group comp.binaries.atari.discuss

: Is it possible to just use comp.sys.atari.st to discuss stuff in
: comp.binaries.atari? Why create comp.binaries.atari.discuss?

Yes, it's possible, but not everything posted in c.b.a will be ST related. It's better to be more general in this case and to create a .discuss group to handle all traffic concerning c.b.a.

: I know I won't go looking for something in c.b.a. unless I read about it in
: c.s.a.st as I don't intend to poke my nose in there if I can help it.

Hmm... It would possible to allow crossposting of part 0 of uuencoded files to other comp.sys.atari groups (part 0 is traditionally a text description, while parts 1 and up are the file itself). Is this a good idea? It may not be, especially if we get a lot of postings to c.b.a.

: Also, does it have to be moderated? Seems like that was the cause of
: problems before.

Yes, it does. Nobody has tried to create a moderated comp.binaries groups since comp.binaries.apple2 a long time ago, and that was changed to moderated eventually. The proposal won't be accepted by the news.announce.newgroups moderator if it isn't moderated.

: And then, of course, comes the issue of: do we really
: need this.

IMHO, yes.

: Right now I'd say we do, primarily because there is no satisfactory ftp
: site. I wish we could set up a really nice network of ftp sites (one
: in US, one in UK, one in Germany, France, etc...) that all mirrored the
: complete archive. U-Mich used to do this, but seems to have gone all
: rough around the edges.

That would probably be a very good thing, but that would still exclude those who don't have FTP access. :(This way we can include them (as long as they have Usenet access) and not worry about having to set up FTP sites.

: >to the Atari 8-bit computer to be posted.

: Hmmm, as long as we still prohibit MOD files (which do have an appropriate
: venue for distirbution), I think we might consider Atari-specific files.
: Technically, the "chip music" files for both the 8-bit and ST series
: probably could be considered binaries in that they are obviously not
: graphics nor text, and they aren't useful on any other platform.

  This is certainly an important issue. Chip music files don't have
anywhere to go (unless one newgroups alt.binaries.chip-specific :) and do
deserve some distribution. But see below.

: 8-bit graphics files are so tiny (<=8K as I recall) that I don't have a
: problem with that, either. ST-resolution graphics would have to be pretty
: special to qualify, though; 32k isn't huge but it's big enough to be a
: nuisance if a lot of them are posted, and frankly, while I love the
: systems, I am underwhelmed with most of the graphics that have been
: produced for it. This is a case where I think http distribution does make
: more sense.

  I don't have a problem with 8 bit graphics files in terms of size, but
conceptually, I can't see a group meant for Atari binaries in general
excluding binaries for the ST simply because of their size. I don't
think it would be a problem, though, as 32k isn't all that big in
comparison to other things that are posted.

  I recieved e-mail concerning an issue similar to this from someone recently, but it was more general. The issue was: What kinds of data files are to be accepted? If you think about it, it's important if you plan to moderate the group much more than "no WaReZ".

To my knowledge, there isn't a proposal out there that has discussed this issue much, mainly because all the comp.binaries groups that have been proposed so far haven't tried to limit themselves much beyond what platform they are for.

My response to this question is that we should probably post data files used in the operation of software. For example, if I draw a picture, it wouldn't be distributable on c.b.a because, after all, it's only a picture. If I create a character set for use with a word processor, though, then that would be distributable on c.b.a because it's used during the operation of the software. (I hope you're all not confused :) Does anyone else want to contribute? If you have a good idea, post it.

Ram Doubler is a "virtual memory" package. It has been alleged by people I trust that it does NOTHING that your system software wasn't already doing. In other words, you pay extra for a product that does nothing - snake oil.

And, by the way, "tripple" is not an English word.

According to Hewlett-Packard's pre-sales info line
(800-752-0900), the AppleTalk port (which is actually a LocalTalk
port, according to HP - apparently you don't even know the
correct terminology for your chosen religion) is an /extra-cost/
option on the LJ4 and 5. That's a premium. The LJ4M and 5M
include the LocalTalk port, but the "M" models cost more than the
"plain" models. Therefore, it's a premium.

Put up or shut up, Petey.

Yes.

<<Kosh mode off>>

Somehow you omitted the fact that the qyuoted price was on 300MHz Alpha (rather expensive at the time). Now, several month later, and if we drop to MHz rating comparable with your Mac clone, it will be the same price if not lower.

It had one video card (but with dual monitor support, I believe), 64MB of RAM,
and the works...
The above does not necessarily represent views of my employer,

: >comparison that tesing a math program.

: Actually, acording to Byte, they used MrC.

Use something generic, like GCC. GCC has been ported to an MS-DOS environment (GCC), and it could probably compile with only a few changes under a Mac environment, but it'd be better to run Linux on both of them. That way, you'd be sure of getting a fair test.

BTA, it'd be much better to perform a series of tests on both platforms under the same environment. For example: Basic arithmetic (integer and floating point), memory copying, disk reads and writes (be sure to use the same hard drive), and probably some higher level tests which give out good looking numbers to satisfy the masses. :)

: your point.

My point is that no matter how good your thing X is, there's something better in some way --- even if it uses older technology. Computer chips are included. The supercomputer is obviously superior for pure power in comparison to a single 604e or 620. But which uses the more recent technology? The 604e and 620 do. Which is better? Probably the supercomputer.

Well fine. If you are going to say my two favorite computers suck (Atari and Commodore), then to hell with you. If there's anything I hate using more than my PC, it's a fucking Macintosh. Okay, okay, when your new OS comes out, every problem will be solved.

Well excuse the fuck out of me for not using your latest "System" (great fucking name for the OS by the way), but I have been irritated by the following things using Macs in the past: When I used to run apps off of floppys, why the fuck does it have to keep writing to the disk? When the hard disk or floppy disk is being accessed or formatted, why the fuck does everything lock up so I can't do anything else? Why the fuck do I have to drag a floppy disk to the trash to eject it? Is that supposed to be intuitive? I think not. Designed like a user would normally do things my ass! When I toss something in the trash I expect it to fall into a pile of rotten banana peels and fish heads, and to generally get fucked up, not to eject! And why isn't there a fucking eject button on the disk drive? I'm not a baby, I know when I want the disk out. Then when the Mac crashes, that stupid bomb comes up, and since I don't trust the computer I have to stick a paper clip in the little hole to get the floppy disk out. And why the fuck can't I just shut the computer off when I'm done like on my Amiga. Why should there be a shut down procedure? Can't the "system" save statistics as it goes along? I have the same beef with Windows. When I am printing, why do I have to wait a fucking hour for my fucking document to print out? So my school was too cheap to use a printer buffer, but have you ever heard of a background print spooler? So maybe your latest version of the OS can do this, but what took so fucking long?

My Amiga solved those such problems 11 years ago. ELEVEN YEARS! That's a long time, no matter how you twist it bonehead! Microsoft Windows solved those problems from the outset too. Also, why the fuck does the Mac "system" copy shortcuts when I really want to copy the whole file? And where's the fucking command line interface? Sure, sure, you want people to visualize these objects, but we all really know it's just a bunch of files on a disk making it all work, so let me at them already.

And why does software designed for the Mac look so graphically drab? How long does it take to get used to the fact that the computer is capable of displaying a whole lot of colors? At least Microsoft makes it's stuff colorful. I never could understand why the old Macs were made in monochrome. Color was too expensive? Not for the Amiga or ST it wasn't.

I have an Atari, two Amigas, and a PC, and some old childhood computers, but I will never buy a Macintosh. The Macintosh simply has no advantages. The Atari and Commodore had no good ideas? Fuck that noise. They were the last "good idea" machines. Okay, there is the BeBox now, but who knows if it will go very far. Hopefully they don't make the interface too much like the Mac. The Mac was built around the way people think? Bullshit. I don't know of any scientific study that suggests guidelines for intuitively using a computer. The Mac tries to be failsafe and ends up being annoying. Only when you get used to the Mac do you start to think like it, and then you turn into a bigot that can't rationally consider the virtues of other platforms. So there are gunna be new Macs with faster processors, faster than the fastest Pentiums? Well DEC Alpha servers are dropping in price. I can buy one of those and run Win NT. An Atari dealer has just offered some two-hundred something mhz. Alphas for about $1200.
Take your Mac and shove it up your hippy, touchy-feely, tye-died, liberal elitist, sensitive-artist type ass! Okay, so that's a stereotype and even Rush Limbaugh likes the Mac, but who gives a fuck.
My point is that the Mac sucks.

Okay, now it's your turn to tell me I suck. Then it will be my turn again. And then I will say you suck harder and you swallow for extra money. And then......

Who cares what the original point was. New points were brought up.
Namely the unjustifiable bashing of the Atari ST and the Amiga.

Well fuck that too! The C-128 was a good value when it was new. The Amiga had just come out when the C-128 was released, but it was expensive compared to the C-128 (but it was a bargain compared to a PC or Mac), and the Amiga didn't have much software yet. The C-128 was a good option because it was cheap and it ran all the C-64 sofware.

This should be very easy to show. I gave a configuration and a price. All
you have to do is give me a similar configuration with a similar price.

     Unix is 70's based & VMS is 60's based but both will stomp all
     over MacOS or MicroSponge wares.

     Digital Research managed a feat that Apple could never manage.
     They produced a 192K OS/GUI. No amount of Apple cheerleading on
     your part can change this.

>
>The 7200/75 can run fine with 8 megs of memory when using low memory apps such
>as ClarisWorks, WriteNow, Nisus which have no equals in the ST platform.

    What does ClarisWorks have that AtariWorks doesn't? What does Nisus
    writer have that WordPerfect doesn't & what does WriteNow have that
    WordWriter doesn't? And why should we care? Will we ever need it?
    Will we ever use it? Will we ever care?

    How will it better suit someone (anyone) who's needs with Atari
    may be lacking?
```

8Megs and Low memory apps are oxymorons.
Also, which of those will be using VM, thus slowing them down
to XT speeds...

>Considering the price is $999 which includes 4x CD and two ethernet ports which
>are expensive extras on the $999 Falcon.

Actually, the ethernet port is included on the Falcon.
Furthermore, a second ethernet port is a pure absurdity.
Nevermind that an ethernet port is one of the more esoteric frills.
A 4x CD can be had for 60bux these days; the benefit of
wider hardware support.

Not in CompUSA, they're not. But, we've already established
that you're out of touch with their product anyways.

>
>>>CompUSA in Des Moines.
>>
>>   You are LYING. CompUSA doesn't sell IDE 2 gig drives for that cheap.
>
>Yes they do..According to their Sunday insert in the paper. Shocking is it?
>Need to spend more time in the present and not in the past.

Odd that such a great price is nowhere to be found on their webpage.
For a retail establishment 200bux for a 2 Gig drive still is rather
remarkable.

Perhaps you could post it here.

The closest thing to that deal that they ACTUALLY have is a $300 dollar
Maxtor 2 Gig drive. No, the rebate doesn't count: CompUSA is still selling
it for $300. (regardless of manufacturer's rebates and misleading ads)

...and you're still a liar.

: >  Will new titles start rolling in?
```

: No.

Actually ... a few will. Atari won't be the one making them though.

: None. from what I understand, JTS has officially stated that the
: Jaguar is no longer being made. Looks like it's a Sony/Sega/Nintendont
: Christmas.

Where did they say this? It's probably true but JTS has made no official announcement as far as I've seen.

: Atari? Oh! you mean that company that used to make cool computers and
: video game systems? well, considering they no longer EXIST...
: *sigh*.....

They no longer exist as a *SEPERATE* entity. They probably will cease operations soon but people seem to think Atari has officially shut it's doors. It hasn't. You can still access the web page, you can still visit the office, you can still reach Atari employees on the phone at Atari headquarters.

The Falcon030 with 1 meg would not.

Such a machine was produced, and made available for sale. 'Twas more a "low price" model than a "you can do things with it" model. A failing of many a company that wishes to appear affordable to Joe Public. (Apple, C= and Atari all fall into this category equally)

Given the capability of the machine, it may be able to run "hello world" but little more.

I don't recall it ever being bought by anyone I know, though.

_I_ certainly would not purchase such a crippled (highly colourful, sound processing "friendly", with _only_ one meg of RAM) machine. I'd up-spec it somewhat. 8+ megs of FREE ram after all required OS and video ram is loaded would be one requirement. Another would be a hard drive of perhaps a gig or three - depending on how disc space intensive my intended use is.

The example I have chosen here is extreme. But real.

Example of other crippled machines include cacheless PowerMacs 6100, 7100 for example. Performance was crippled beyond belief. And C= could probably have a lengthy list of "cripplings to meet a price point" as well.

I would be. Although, some users need 100Mflops and 64Megs to get ANYTHING done.

That's the advantage of legacy GUI apps that can actually do productive work within 1Meg or less.

It's still a very dodgy comparison, the markets that you mention are
very small probably tens of units a day in the case of SGI, in the PC
market it's like tens of thousands, some markets are too small to be
worth competing in. If I decided to set up a company that specialises
in breeding Cockroaches for racing purposes I could probably establish
a 100% market share easily, if I was to make VCR's then probably more
likely to be 0.00001%. 8.8% in a *MASSIVE* market like the PC market,
especially when you had to pay the incredible R&D costs and compete
against people who didn't, is in my opinion a very good share, I
believe theye are in something like the top 3 PC makers in the world
still(true?).

That is incontrovertable. However, if you would use NewsXpress instead of
Netscape to read the news, you could create a killfile (right from the
drop-down menu) and you'd never have to see his drivel again. Ignoring the
git is the best thing we can all do - don't reply to him at all! Maybe he'll
get bored and go annoy the Amiga users for the next 2 1/2 years. Hey, by
then he might even graduate, and since it costs more than $80/year for
commercial Internet access, he'll vanish from the Internet altogether!

OK, whatever.

When I have some free time (I have to work, you know) I may check out prices on Alpha systems. From recent press releases, I've seen 400/500 MHz Alphas starting at $17,000. Now, how much would a comparable Mac clone cost?

Such a system does not exist in any single processor Mac system. I suspect
that you would need to buy a Genesis 4x604 processor system. I believe
that the starting price is about $15000 but I really don't know. Why
are we now comparing the price of massively high-end systems?

I do have access to Netscape and I still think frames SUCK. As you mentioned they do produce this hacked up recursive browser effect which is not usually even correctly constructed. My browser navigation controls suddenly become useless and are seldom replaced within the frames. Furthermore, frames suck up memory/resources like you wont believe. Some lower end PC/Macs are as capable of displaying these pages as a DECVT-420 running Lynx...

Not quite true. There are many less self-centered developers that actually acknowledge that the entire world is not running the same sort of hardware and software that they are. The rude part of the web is actually quite small.

It's not being self-centered. It's recognizing that it is of almost no value to support lynx because they represent such a small part of your potential customers.

Kyle R. Hofmann <rhofmann@crl.com> writes:

> And so by your logic, the Alpha is superior, and that's what we should
>all be using.

Yes, the Alpha is superior and if they created a relatively inexpensive system then, yes, that is what we should all use. But it has not been demonstated that DEC makes such a system. I really wanted an Indigo Impact at work but I didn't get one because they cost way too much. But they ARE better.

> But that still doesn't go up to 400 or 500mhz.

The sum of the MHz speed of all the processors would be 480MHz.

> So we get an inferior computer for a cheaper price. Fair.

Very true.

> To prove a point.

I don't understand your point. Is it that Macintosh is a superior system
but costs too much?

>
>Why would I need to spend $300 for ram?  16 megs go for $120. Why would I need

Because a PowerMac needs _at_least_ 16 megs to run acceptably. Anyone who
knows Macs will advise you to get 32 megs - which go for ~280 US$s here.

>a Centronics cable?  $100 for one is absurb.

It's so "absurb" that it costs that much because it's a fact, I guess.
It's called the "PowerPrint" cable.

>Why would I need a monitor
>adaptor that costs $50 when Sony and Viewsonic bundles one?

Because I own a Sony, and there wasn't a bundled adaptor inside the
package? And what do you expect me to do when I buy a Mac - get a new
monitor also?

>Why would I need
>to spend $200 for a keyboard when one can be had for less than $50?

An Apple "enhanced keyboard" costs 200 US$s. Period.

>500 meg HD
>is sufficient for most people but to include a extra one can be had for less

500 megs are ridiculous for a Mac - they might suffice for an Atari, but
then - Atari apps usually ship on two or three disks.

>$200 for 2 GIGS

Wait a minute: you claim you will get an SCSI 2 gig drive that cheap? Send
it to me ASAP, for here a 1 gig IBM DPES31080 will cost ~240 US$s.

Yep, and opposed to "far superior" MacOS, Atari OSes are

- multitasking preemptively
- faster in any GUI operation (while not dropping device independance)
- dynamically allocating RAM (as opposed to the stone-age MacOS static RAM
  allocation crap).

>The 7200/75 can run fine with 8 megs of memory
                     ^^^^you misspelled that, it should be "slowly".

One was bought for him aeons ago and donated to him.

But he never used it.

It's time to for a little education.. A 586/133 is equivalant to a Pentium 90.
A Cyrix 586/133 with the motherboard can be had for less than a $100.
Next time know what you are talking about before you move your lips. You don't
what to look like an idiot..

Errm, because they are available? Actually, these are not "massively high-end". Massively high would be something with a dozen or so of Alphas in it (and they do exist).

By the way, adding up CPU speeds, as you do in another message is meaningless on any platform, and especially on Mac, with its rather limited support for multitasking and multythreading, and mostly non-threaded software base.

Unfortunately, Digital does not list prices for their recent systems on theitr Web site (or at least I could not find them), so I still can't give you a proof with URL and everything...

Say, can I plug a nice Digital's or Intergraph's video card with 24MB of RAM, Z-buffering, double-buffering, subpixel precision, etc., into your Mac clone? B^)

The above does not necessarily represent views of my employer,
my educational institution, or of myself.

Really? You find pages with messages? Usually, I find completely blank ones. I have only found one page which has separate frames and non-frames version. It was (it's not maintained anymore) devoted to id Software's game Quake, and was entitled Aftershock. The author generated the HTML file through some method which allowed him to keep one version of the source and have both frames and non-frames versions available.

I wish more people would use systems like that if they insist on using incompatible and proprietary tags.

Good point. Why are we discussing Alpha anyways? I said that PPC chips
are faster than Pentium and PentiumPro chips. I did not say that they
are faster than MIPS, Alpha, Ultra-SPARC...

Doesn't matter - they dominated it, and the numbers looked rosy. The overall picture, though, was less so.

Same with Apple and its tiny "niche markets."

: OK, so running your program will force me to have a complete X implementation
: for my platform.

Yep. That way, I have the same environment on each. With the same environment, I can run the same program. Your idea says, "Let's write the code three times over for completely different and incompatible environments, then use #ifdefs to mark off large portions of the code." That's just stupid.

Anything is incompatible between environments unless you change large amounts of the source code. If one environment can emulate another (MS-DOS emu, WINE, MS-DOS boxes, SoftWindows), then it's easily possible because it's the same environment.

The difference between how C is compatible and how environments are incompatible is that C does not rely on hardware dependant mechanisms (unless you put in assembler or write straight to the hardware (in which case you are being directly dependant on the hardware, no matter how portable C is)). If you write good C code, it can be ported between Suns, HPs, IBM mainframes, PCs, Macs, Crays, Vaxen, and maybe even PDP-10s! If you have the same kernel running on each, same C compiler, and same set of C header files, then all it takes is a re-compile. With different kernels, compilers, and headers, you have utilities like Imake and autoconf which allow you to create Makefiles to turn on or off specific workarounds in your code.

: I would assume that I'll also need a C compiler

If you don't want to compile it, get a binary for your platform.

: and I'll need a complete unix implementation

No, you will simply need the X server (having configuration files and a window manager helps, though.) BTW, my X server (XF86_SVGA) is 1433k, and it supports nearly any video card you can think of. That, configuration files (15k), and a window manager (fvwm 2.0.43 (146k)), comes to 1594k, just over one and a half meg. Much smaller than Windoze (any recent version), and pretty good overall.

: if the X program needs to do fancy stuff like access the network or
: even check the time.

Give me a break. If the facility to access the network is there, you can access it. Ditto with checking the time.

: Good idea, I'd much rather
: install all of that crap than install Sun's 2MB applet viewer.

I think you would. It's smaller and more useful.

Overpriced purchase? Say again...Who still charges $1500 for an 030 box today that the market already has put out to pasture? Interesting. I see what you mean. I consider the $999 7200/75 a bit overpriced despite the included 4x CD, two ethernet ports, 16 bit sound and acelerated video. Yep the Powermacs are overpriced. Thank god for PowerComputing and soon Umax/SuperMac.

It seems with the rest of the market falling down upon them and the general public believing in the imminent demise of Apple, that they need to beat on what they percieve as an easy target.

The ST is history now (for the most part). It is odd that anyone who would bother to come into this group would not have the slightest hint of it's existence.

     This example intrigues me, for I view the value of a Lexus to be
     in pretense only. I suspect that Mac's serve the same function for
     these advocates.

     I get more utility out of an F-150 than I could ever get out of a
     Lexus for it is actually designed with the above average american
     male height in mind.

     I wonder if they hit the ceilings of their Macs with their heads?

No, the standard should be constructed such that non-support for
GIF is not a problem.

This is, in fact, the case.

Properly coded pages will have Text Only display options for
the Images.

>
>Why would I need to spend $300 for ram? 16 megs go for $120. Why would I need

It's still an added expense however. Unlike the common Apple paradigm,
the machine is not ready 'out of the box'. It needs modification to
be usable.

>a Centronics cable? $100 for one is absurb. Why would I need a monitor
>adaptor that costs $50 when Sony and Viewsonic bundles one? Why would I need

Then you'll be paying the premium likely to be stamped on anything
'Macintosh'.

>to spend $200 for a keyboard when one can be had for less than $50? 500 meg HD
>is sufficient for most people but to include a extra one can be had for less

This is a rather lame excuse for being behind the times...

Mac's have always been behind in bundled storage and RAM.

>than $200 for 2 GIGS. Must be expensive on your side of the Atlantic to
>support the welfare state.

So? Who sells SCSI drives that cheap?
Dirt Cheap Drives doesn't count...

>
>OK, then please explain the difference between OpenGL and Java?

Why? It's been pretty well proven that HTML does not equal Java or
Shcokwave. The WWW is an HTML-based information transfer network. Neither
Java nor Shockwave reside on the web, they are simply methods of sending
data. The most basic, most compatible, most correct way is to send it
as HTML 2.0 information.

Even sending graphics, when those graphics are _REQUIRED_ to access the site,
is incorrect. A site that requires graphics eats bandwidth and eliminates
the ability of Lynx users to use the web.

If, for example, I had NO ASCII text at all, but instead, rendered the site (say, an online version of War and Peace) as a set of PCX files, would that be proper? PCX is an accepted, universal format for bitmapped graphics. But would bandwidth-hogging graphics be necessary, just so one could display fancy flourishes in letters?

There's a time and place for everything. Using Java is not inherently wrong - but making a site unaccessable to an HTML-compliant browser most certainly is.

>people who govern those standards.

Well, in a manner of speaking, yes. Sun owns Java, and any app that claims to run Java or Java script has to meet their approval. Same is true of Macromedia/Shockwave. However, since both of them are being used in non-standard ways (e.g., over the Web via HTML), they are, in fact, simply downloadable files (or the scripts that produce the desired effects are), selected and transferred via HTML but not part of the HTML standard. That's why I suggested the IGS page (which I /do/ intend to put up Real Soon Now); it's the exact same phonomenon; people who don't have

the necessary hardware /and/ software to run the
/application-specific/ files will just get a lot of (to them)
useless text. People who are running the Atari ST will get
full-motion animation and "chip" sound with very little overhead.

That doesn't make IGS a standard, though. It's still a
specialized application, as is Java/Javascript and Shockwave.

```

As you can see, EVERY post by him is in an Atari newsgroup - even the one in the video games hierarchy.

Well, since the man (I use the term loosely) hates Atari so much, he obviously must be a complete bonehead to hang out in the Atari newsgroups. Thus a new newsgroup is launched in his "honor:" alt.bonehead.sinclap

Oh, and Petey: Just because your news server doesn't carry it doesn't mean that hundreds of thousands of people all over the world can't. Maybe you can get your sysadmin to explain the difference between "auto-add" and manual addition of new groups.

This idiot must be doing keyword searches on newsgroups for anything
negative said about Macs. Mac Lusers are an insecure bunch of fools
that have to constantly defend their overpriced machines. With a
declining world market share of 10% and US market share of 7%, I
guess they will be getting downright meaner.

Let's make it clear: Apple lost the desktop wars. OK. Feel better?
There is nothing that Apple can do to win marketshare. They had
the world in their hands, but frittered it away due to piss-poor
management by a French dude and a sugar water dude.

It settles who's used the better compiler. Cross-platform tests
that use simple benchmark numbers that test nothing but math are
meaningless. What can the system do in the REAL world? How long
does it take to move 50 megs of data from one address in RAM to
another address in RAM? Of course, even there, you're testing
overall system design, not just the CPU, but that's a lot closer
comparison that tesing a math program.

Given a choice, I use SCSI also, but IDE is the "standard" for
people who have to pay technicians to install things. <G>

WD, Quantum, IBM, and I think Maxtor have difficulties working
together in an IDE master/slave chain; certain drives abosultely
INSIST on being the master in such a relationship when working
with a different brand of IDE drive. And IDE is, after all, an
IBM-designed and somewhat-crippled version of SCSI. The name of
the designer, and the fact that it has departed from the SCSI
/standard/ should tell you why it has problems.

Is that funny where you come from? You said you installed a CD Rom
changer in less that a minute and the other bloke said all you ahd to
do was plug the cable into the Falcon to attatch a Hard Drive. That
was funny, once again you seem to have completely mis-read a posting.

Oh, please...Like the Atari Falcon was useful out of the box. The 7200/75 came
out in July/95 and since has been discontinued. With Ram Doubler 2 for $50

```
will tripple the memory.

>

Say what?  What premium is that?  At work, we recently purchased some HP Laser
Jets.  No extras needed.  Just plugged in the cable to the Apple Talk port.  No
mess nor fuss.
>
>>to spend $200 for a keyboard when one can be had for less than $50?  500 meg HD

>     Mac's have always been behind in bundled storage and RAM.

The 7200/75 is 1995 vintage and since been discontinued.  A few left.  All
PowerMacs ship with at least 1.2 gigs today.

>>than $200 for 2 GIGS.  Must be expensive on your side of the Atlantic to

Actually, Ron, the 800 series can access 8 floppy drives. Atari
didn't produce any drives that would set to D5: or higher, but
there are after-market ROMs for Atari drives that do that. And,
if you install a RAMdisk in, say, a 130XE, you'll find that you
can assign drive numbers up to 8 (possibly higher, depending on
the RAMdisk software).

Ah, but the key word is "brand." There are exactly one /brand/ of Apple computer. There are /thousands/ of brands of other personal computers, including but not by any means limited to IBM, Compaq, Dell, Putrid Smell, Panasonic, Joe's Garage, ad nauseum. Thus, in order to be the number one /brand/, Apple need only outsell the largest PC market share holder. Since, until recently, there /was/ no competition for MacSystem boxes (unless you count emulators, and you shouldn't), Apple has an effective monopoly on the market in Oz.

Interesting, that Dejanews omitted other newsgroups that are not listed in your tantrum. I would try other newsgroups. Anything interesting in alt.sex.stories.fat? Is that were you and alleged wife hangout to be among pals of your size?

```

> As you can see, EVERY post by him is in an Atari newsgroup - even the one in the video games hierarchy.

How convenient that others were left out.

> Well, since the man (I use the term loosely) hates Atari so much, he obviously must be a complete bonehead to hang out in the Atari newsgroups. Thus a new newsgroup is launched in his "honor:" alt.bonehead.sinclap

'Yawn'.. I see that you complain and have a spasm on the other newsgroups as well. You spend over half the time flaming others because you want to impose your manners on others.. Sounds like those bunch in San Diego.

>
> Oh, and Petey: Just because your news server doesn't carry it doesn't mean that hundreds of thousands of people all over the world can't. Maybe you can get your sysadmin to explain the difference between "auto-add" and manual addition of new groups.

Amazing how you used Intel's time to accomplish this extradonary feat...

```

: NT...superior OS...that's beyond laughable.

Yup. :)

: And Alpha systems cost WAY, WAY more.

Depends on the configuration of the Alpha and the PPC.

: As do any UNIX boxes.

Linux is free. GNU software is free. X is free. You can set up a fully functional Unix box with a GUI for free, as long as you have the hardware to do so.

It depends on what you want to use it for. If you want an
all-in-one system (less monitor, of course) that has built-in
MIDI support (including BIOS support for MIDI), there /is/ no
other system. Each system has its own strengths and weaknesses.
The Mac file system is a weakness, but the relative abundance of
commercial software is a strength (if you prefer the commercial
wares; personally I prefer shareware). Finding software for the
Atari is admittedly harder than for a Mac. It's almost always
worth the trouble, however, unlike more popular platforms, where
it's quite common to find 10 crappy wanna-be programs for every
"this is /almost/ good" program, and hundreds of POCs ("Pieces of
Crap") for every truly good pacakge.

As I have said before - how many videotape databases does one man
need, anyhow?

>> >Do you know any place around Columbus, Ohio that I could see

>
>Know where I could start looking...I really want to see one now.

Not offhand, but post a question in comp.sys.atari.st and you
should at least get an intelligent reply, even if it isn't "yes,
I have one you can come see."

>Anyhow...I want to learn more about Atari.
>But I'm still happy with the Mac on my desk.

For many purposes - even for most purposes - the Mac is a fine
machine. I hope to add one to my "stable" someday. I won't give
up my Atari, but I would like to have a Mac as well.

>Thank you for the education.

Intelligent discourse is always a pleasure.

: OK. So HTML is the only standard that should form the basis of the WWW?

Yup.

: There is no content format, besides text, that is part of the HTML
: standard.

Correct.

: So GIF needn't be supported and therefore shouldn't be used?

No, it does not have to be supported. From section 5.10 of the HTML 2.0 draft standard (IMG), under SRC:

> SRC
> specifies the URI of the image resource.
>
> NOTE - In practice, the media types of image resources are limited to a few raster graphic formats: typically `image/gif', `image/jpeg'. In particular, `text/html' resources are not intended to be used as image resources.

It does not specify that GIFs or JPGs must be supported, and so it's not required. Those two should be used if you are creating an image to be displayed on the Web, however; the standard, in stating that the typical formats for images are GIFs and JPGs is reinforcing the use of GIFs and JPGs as image formats to be used on the Web and supported by graphical browsers.

Funny thing, I'll agree with you. OK, Lexus is a very good car, I sure could find _lots_ of way to spend money better.

OTOH, hitting Mac's ceiling is easy even for a midget...

I don't have a recent Computer Shopper ready, but about 5 months ago, a 300MHz Alpha box with similar specs (but with 256 byte emmory bus, 2MB cache, and Ultra Wide HD) was selling for about $2000 more. Add five months, bring down CPU speed, cache, etc., and you should fall within 10% or so range...

This true of Java and Shockwave as well. If your browser cannot view them they need not be requested.

I never said Lexus was a very good car. In fact, I said it was a poor
one.

The Mac/PC crowd has convinced the general public that one needs
a Lexus just for basic transportation and that an escort or
even a crown victoria will no longer do...

    Yes it was actually. Even without a harddrive, any ST+ class machine
    is quite ready to run with even 1Meg RAM. This is the benefit of
    an OS that takes 200K of storage and 200K of RAM.

>Say what?  What premium is that?  At work, we recently purchased some HP Laser

     I've seen complaints in mac.advocacy regarding the way in which mac
     vendors soak mac users for components such as monitors and harddrives.
     They'll do nothing more than slap a 'for mac' sticker on a generic
     part and jack up the price.

>Jets.  No extras needed.  Just plugged in the cable to the Apple Talk port.  No
>mess nor fuss.
>>
>>>to spend $200 for a keyboard when one can be had for less than $50?  500 meg HD
>>>is sufficient for most people but to include a extra one can be had for less
>>

Peter, you even argued in C.S.MAC.advocacy that this box was insufficient
for entry level, and that Mac was still too expensive.

Fact is, dollar for dollar, capability for capability, it's still easier to
get into computing on the TOS platform (and cheaper) than it is on entry-
level Mac. Period.

Actually, acording to Byte, they used MrC. MrC is a very commonly used
PowerMac compiler (maybe 30% of the market, just a guess). They could
have used xlc which probably would have produced better results. On
the other hand, they did use Intel's compiler for the PentiumPro.
And remember, a test of math functions should favor the PentiumPro because
it has some trancendentals implemented in hardware. BTW, the PPC is
heavily optimized for memory moving.

OK, Peter, you seem to know everything (a common situation for
undergrads, as I recall).

Please, O Fount of All Knowledge, tell us what was necessary to
add to a Falcon to make it useful? And don't waffle on about
monitors, the Falcon is available with your choice, or no
monitor, as the customer desires. Talk about the computer. Or
admit that you know not whereof you speak.

So it was $2000 more. That's 1/3 more which is not "close". Did it have a
128-bit 8MB video card and a 64-bit 4MB video card? Did it have a 8x CD-ROM?
Did it have 64MB of RAM?

So can a Mac SE and LC class machine in thier standard memory configuration
when using System 6 and System 7.1. Nothing efficient about the Atari OS
considering it still 1980's based.

The 7200/75 can run fine with 8 megs of memory when using low memory apps such
as ClarisWorks, WriteNow, Nisus which have no equals in the ST platform.
Considering the price is $999 which includes 4x CD and two ethernet ports which
are expensive extras on the $999 Falcon.

I still do. But compared to the Falcon, a bargain. Apple's Macs are expensive
compared to PowerComputings offerings. If I were to buy a Powermac today,
would be the Powerbase 180.

> Fact is, dollar for dollar, capability for capability, it's still easier to

> level Mac. Period.

You are full of shit! You can get new Cyrix 586 boxes with 16 megs, 1.6 gigs,
4x - 8x CD with monitor for $600.. New Mac 638's with CD, tv tuner and 15'
monitor with software bundle for less than a $1000... I have seen Mac II's for
as little as $99.

ROFL! The little squirrels who are whisppering are feeding you shit! You have ram doubler mixed up with a PC product that was suppose to do what RD does but did not work and snake oil.

> And, by the way, "tripple" is not an English word.

Sue me.

Apple Talk is Local Talk. What part do you not understand? You're behavior of being ass has followed you from alt.sex.fat!

I don't know what HP stated, but we did not pay extra. Also the HP's came with ethernet ports as well.

I'm sorry for saying that they were slow.  I didn't know about the top of
the line stuff.  I've never seen the Atari GUI...and I have only seen the
Amiga GUI a few times.  NeXT is a good system too...but they just don't
have enough of a software base, or name recognition to matter.

Sure...but the question is, why do well over 90% of PCs ship with EIDE?
```

The average user isn't going to have a clue that there's a difference (I've run into other consultants that didn't know it mattered much). And you're going to have to install that SCSI card too...which you and I could do quick enough, but most people are going to have to hire someone to do that on their PC...with Mac it's right there, out of the box...it took me less than a minute to get my SyQuest EZ-135 out of the box and on my desktop.

And the bottom line is that Macs are not "technology of yesterday," even after you put that SCSI card into the PC it's still going to be much slower than a 604e...Hell, my 7100 (with a 601 at 100Mhz-- no where near as fast as the 604e at 100Mhz) runs rings around my friend's P-133...and it has a SCSI card.

Anyhow...

Yeah, and I can buy software for an ST where? Come to think of it...where can I buy an ST?

> There were no facts to rebutt.
> One opinion was met with another.

There were no facts in my second post? Did you read my second post?
I don't know how many studies I sited.

I'll agree that I was totally out of line saying that Atari and Commodore were slow. I was uninformed. However, it is a fact that a 604e 225Mhz will run rings around anything with an Intel chip inside of it. And that although Mac has lost market share recently that it is still one big company, with a name known the world round, with a really high quality product, has a lot of great ideas behind it, has millions of die hard followers, and is going to make a new OS release that will change the face of Macintosh as much as Win95 changed it for Windows...except, this time it will be for the better.

(Let me also say that I would strongly support any other OSs that have good GUI's and run on CHRP chips)

What is the different between Netscape and GIF89a? That makes Netscape
extensions propriety and GIF89a a standard? And PCI? And OpenGL?

wrote:
: That sales info is a bit of an illusion. As you may or may not know,
: Apple licensed its first clones almost two years ago. And PowerComputing,
: the first clone maker, has had explosive growth over the past year.

How many units have they sold? What is their net profit (if any)? What is their gross profit? What percent of Macintosh compatibles are they selling? What percent of the computer market do they own?

: I do not believe that Commodore or Atari had any company making clones.

Correct. That was one of the reasons IBM compatibles became popular. Clones were usually cheaper. Now, of course, IBM controls a pathetic share of the IBM compatible market.

: Also, Commodore and Atari sucked. They were slow, ugly systems, which
: just didn't have any really good ideas behind them.

Your humble opinion. Not mine.

: Also, Commodore and Atari were snails compared to PCs. Power Computing
: (www.powercc.com) now makes a 225Mhz machine with a 604e RISC chip.

At the time of the 8 bits, the Apple line was using 6502 compatibles, same as Commodore and Atari. The early Macs used Motorola 68000 chips, same as the ST line. If the Atari line had not been discontinued, we would be seeing really big hardware in Atari computers right now.

: It is far faster than anything you can buy in the WinTel market, no
: matter how much money you have.

Personally, I'd rather get a bunch of Suns than spend that much money on a single chip. After all, it'd probably cost the same.

: And before '96 is over the 620 will be shipping, a 64-bit chip, while
: WinTel will still be stuck in 32-bit processor land.

That's nice. DEC Alphas have been 64 bit for a long time now, and if I'm not mistaken the Pentium is actually 64 bit (but with no way to access a 64 bit mode).

: And within the next 12 months, in addition to Pioneer, Radius, Power
: Computing, Daystar Digital, Acorn, Goldstar and Ing Olivetti, industry
: heavyweights such as IBM, Motorola and AT&T will be announcing that they
: will be shipping CHRP based Power Macintosh compatible systems, and who
: knows who else will sign up to make CHRP boxes?

And how well CHRP boxes will do is still a mystery.

: > Apple Computer - the denial ability of S&L managers, the financial
: > security of junk bond funds, the technology of yesterday.
: "technology of yesterday"

: We can take a spiffy P5-200,

YM "P6 200"

: with all the EDO ram and pipeline burst cache

Oooh, I can have a gig of L2 pipeline burst cache? Thanks, this beats *anything* out there right now!

: yu care to put in it, it's happy EIDE drive (which over 90% of WinTel
: systems are shipped with...god knows why? Mac has been using SCSI for
: years, as all PCs should)

My friend's 386 dx/25 is all SCSI. He bought it used. My dad buys P5's for his office all the time. They're SCSI, too.

: and put it next to a put it next to a
: PowerComputing 225Mhz 604e and see which one looks more like the
: "technology of yesterday."

Compare your nice little PPC 604e with that supercomputer Intel is building for the US government (with several hundred Pentiums). Which looks like the technology of yesterday? Which is using the technology of yesterday? Which is better?

It's not about how big your d*ck is, it's about how you use it.

I rather thought the point at hand was where or not Apple was doomed. I
could go on for a long time listing all the palces I know where to buy a
Mac from...I don't even have a clue where buy a ST...

Well, I have to admit that I was uninformed when I said that they sucked.
I had totally zoned on the fact that Commodore was responsible for Amiga
(which I liked quite a lot when you could still buy them in stores).
>

Infact, the ST runs on the 68060 right now. Not a bad chip...but it's
still CISC. Also, there may be an Amiga OS for the CHRP platform.

Ahem? I don't think so...Apples cost a little more but Suns
man...wow...those things are EXPENSIVE! There's a $9,000 Sun box sitting
in the OSU bookstore... it renders 3D images at less than half the speed
of my $2000 7500.
A 604e at 225Mhz is easily twice as fast as my 7500...and still costs far
less than $9,000.

> : And before '96 is over the 620 will be shipping, a 64-bit chip, while

Yes, DEC Alphas have been 64 bit for a long time...and they are so cheap
too...not. And that 64 bit mode isn't going to do you much good if you
can't access it...and besides there are many WinTel apps are still 16
bit...

Yes...so the question is: why are there so many WinTel machines still
running on EIDE?
>
> : and put it next to a put it next to a

>   Compare your nice little PPC 604e with that supercomputer Intel is
> building for the US government (with several hundred Pentiums). Which looks
> like the technology of yesterday? Which is using the technology of
> yesterday? Which is better?

What kind of a compairison is this? Can I go down the street and buy one
of these? I think not. But this also brings up a good
point...mulitprocessing. Something that WinTel can't do very
well...within a few days Apple is releasing a dual Chip 604e...for around
$5000...as if one chip didn't totally outclass anything Intel makes...but
two...please.

>   It's not about how big your d*ck is, it's about how you use it.

Another lead into a wonderful point. The fact that the MacOS is so much
easier to use (if you find a study that says otherwise...please send it my
way) than anything that Mr.Gates has put his name on. And don't even
start going on about SunOS's...

Apple has been releasing new technology after new technology for the past
two years (really longer than that, but the rate has been amazing over the
past two years). I've said it before, and I will say it again..."If you
want to see tomorrow's PC, just look at today's Macintosh" --BYTE

Because it's cheap. Same reason Chevy outsells Mercedes and Jaguar (the car, not the game console <G>). For Joe Average, who has no ability to open the box and plug things in himself, E/IDE is fine. For anyone with a screwdriver and the ability to use it intelligently, it's pretty disgusting.

Hmm, I'll bet the last Atari you saw was an 8-bit system running plain-vanilla Atari DOS (probably version 2.0). Hardly an up-to-date system even in 1985.

>Of course...I have to say that I'e never even seen a Falcon 030 in my

Here's a few starting points:

http://www.shareware.com (very limited but direct Atari search engine)

http://www.filez.com (much better)
http://www.3rdplanet.com/~starship/atari.htm (my Atari links - still limited but growing)

>Do you know any place around Columbus, Ohio that I could see Atari's TOS?
>I'd really like to. How much are they going to cost?

I don't think you'll find a Medusa or Hades around there, but it's possible that
there's a Falcon user in town.

>I'm sorry to insult your beloved platforms without enough knowledge. I

Comparing an 8-bit system to a Mac is hardly fair. The C128 was the last Commie
8-bit. If you want to compare Commie to Mac, grab an old Amiga and stack it up
against the Mac Classic. Or for a more modern head-to-head, compare the latest
(and I don't mean "soon to be released," but something that's actually available
now) Mac system to the Medusa.

>Atari...well...I never saw one I liked.

That unfortunately, can't be true...An Amiga (like the Atari 800XL that was its predecessor before it) can only use 4 floppy disks. If you say 4, then I'll believe it! <grin> If you haven't seen modern Atari hardware (Falcon/Hades/MKX/DirecT 040+060) and latest software offerings, then you've missed the best! Software and Hardware quality for those who follow the Fuji has never been so good.

>Of course...I have to say that I'e never even seen a Falcon 030 in my life. They may be very good boxes (so are NeXT and the BeBox...) but there's just not enough software for them...at least I would have no idea where to start looking for it.

I have had my Falcon since 1993 and I've not been able to keep up with all the software (commercial and especially PD) that is available. Its very high quality also. I'm not saying that there is more than what is available for PC's or Mac's but there is more than the average user can keep up with. Try just about any of the major Atari FTP sites...they all have sections dedicated just to the Falcon...

ftp to:

1) toad.net (umich mirror)
2) ftp.cnam.fr
3) ftp.uni-kl.de

and many, many others...not even mentioning GEnie and untold numbers of WEB sites and privately run BBS's...

>I hope it does make a come back. I'd love to see them alive again on the CHRP platform. I'm in very strong support of any good GUI and any system that's main focus is on a high quality interface. Macintosh is just the only one I've found that people actually recognise...

Like Atari users, Amiga users are very dedicated and loyal...I believe that the Amiga, as a whole, will do fine.

>Do you know any place around Columbus, Ohio that I could see Atari's TOS? I'd really like to. How much are they going to cost?

Hmm...not my area so I'm not sure...I think that there used to be a pretty big user group in Miami, Ohio...(M.A.C.E.?) Perhaps someone from Ohio can jump in here and offer assistance? :)

>I'm sorry to insult your beloved platforms without enough knowledge. I just have such strong memories of my Friend's Commodore 128...it was not so hot. And finding good software for it seemed like a real challenge.

In no way, shape, form or fashion can you compare the 128 to my Falcon! They are of different worlds... <grin>

I was just randomly going through news groups when I saw the "Apple is
doomed! blah blah blah" post and reacted...but this is really pretty neat.

I didn't know that there was actually an Atari GUI...I had heard that
Amiga was still alive before I stopped by here...but I didn't know that
they were thinking about running on CHRP...
Is there an FAQ for this group? Or could someone just fill me in on the
state of things for Atari and Amiga in today's world?

Anyhow, thank you very much.

GIF enhances interoperability and Netscape hinders it.

Ever try viewing a pixmap under lynx? I'd not bet on it being very pretty on CAB either.

Then there are all of those 'best viewed with program X' and download 'program X' bits littered about many web pages.

This phenomonon does not exist with GIF, or OpenGL, or PCI.

Furthermore, those are PROPRIETARY standards. Much like any other PROPRIETARY standards, the proprietor could screw everyone else if they really wanted too. Microsoft is notorious for this sort of thing.

The PixMap and Frames (which are ugly even on a weak PC running 'scape itself) are classic examples of 'screwy' extensions.

The Atari ST, TT and Falcons use GEM (Graphics Environment Manager) from Digital Research Incorporated. GEM was ("is" IMHO) the most intuitive OS to be offered in the PC-IBM compatible market. It was nice that DRI cut a deal to port it to the Atari ST. So, PC'ers who have always been "cutting edge/in the know" types should already be very familiar with GEM or at least with the "office style" (desktop) interface. It is nice to think that at least some of the computing that people have done in the last 11 years or so was done so using elegant interfaces from DRI and not the weirdly worded Mac stuff or the old fashioned "tree directory" approach that MS forced people to accept with Windows. DRI did a poor job marketing their OS's, but they were the most amazingly easy to use the market has ever seen.

Atari clones will do OK in specialty markets and with computer hobbiest looking for an alternative to PC or Mac machines. It is pointless to argue the merits of a Mac over a Falcon. The average "computer" person will never even hear about a Falcon, etc. PC'ers really don't care as they have enough trouble figuring out how to keep their own machines up to speed. Mac users are in another world as far as terminology is concerned. Just my thoughts. I am too old to worry much about any of this. I don't even plan on making my kids computer literate. The real problems (like water and food) are much more important. :)

>Um...what happened to those beloved FACTS of yours? What a fact filled
>rebuttal!

You want facts? I rarely have time for long posts in advocacy groups (I have more important things to do), but if you insist...

>How about some more facts...

Well, let's see...

>Like the fact that 80% of all computers used for color publishing jobs in
>the advertising, graphic design, printing, publishing and pre-press
>industries are Macintosh, according to a 1996 study by Griffin Dix
>Research Associates. At medium to large sites with more than five
>employees, the share of Macs installed jumps to over 85%.

So? And 90% or so of computer users use PC Compatibles. Does it make them the greatest thing since OS/360? Macs are nice for DTP and alike (but a lot of really high-end stuff is done on workstations, and some on NT boxes), but it definitely does not prove that they are the best.

>That GIGA Information states that Apple is the worldwide market leader in
>digital camera sales. The Apple QuickTake share is greater than that of
>all other digital camera manufacturers combined.

So? I have not really looked into digital cameras (don't need one), but from what I've seen, Apple's are not considered best by far.

>Maybe that Apple has been named the number one vendor in customer
>satisfaction for the sixth time by Linea Edp, the major Italian MIS
>magazine.

Well, for all I know it may mean that Italian computer manufacturers suck. Apple does not rate first in the US.

>That Apple is the most used personal computer brand overall in Australia, per
>IDC, and is the number one brand in Australian small business, education,
>and consumer markets. And that Apple is the number one U.S. computer
>vendor and the number three vendor overall in Japan with 14% to 15% share
>per IDC and Dataquest.

Which does not mean anything, because copmpetition in *MacOS* niche is fairly small (do Mac clone makers even sell in Australia?). How about Mac market share vs. PC market share in Oz? That would be far more meaningful comparison.

>That Apple continues to lead the way in technological innovation.
>According to the 1/29/96 issue of Information Week, Apple Computer was
>awarded 53 U.S. software patents in 1995, more than any other vendor.

Which, again, does not mean anything, as patents are given for all kinds of stuff wghich is not at all earth-shattering. How many of those patents were actually interesting, as opposed to "look and feel" and such?

>Perhaps that the February 1996 issue of PC World magazine rated the Mac OS
>the best 32-bit operating system, over Windows 95, Windows NT, and IBM
>OS/2 Warp.

I tend to disbelieve ratings in commercial magazines. In my personal experience, MacOS was so unstable, that while it might be fare to compare it with 5, putting it in the same league with NT is laughable.

>That Mac OS was the clear winner in the Software Publishers Association's
>first "Ultimate Mac vs.Windows Challenge," in which users of each platform
>were asked to perform eight real world tests. The Mac user, a ten year
>old boy, finished his tasks significantly faster on average than his adult
>Windows counterpart (who I might add had another adult helping him!).

Again, some bogus test with no background information. For all I know, fols who where using the PC might have been Mac users who hate Windows, and the kid might have been brainwashed to perform those tasks without thinking.

>That Apple Power Macintosh 7500 and 8500 received BYTE Magazine's 1995
>Editors' Choice Awards of Excellence, which honor hardware or software
>products whose technical innovations set new standards for products in
>particular classes.

Well, which other products did receive same awards (and, btw, who happened to be largest advertisers in BYTE in around that time?)?

I'd really like to know what was so new in those Macs? They did not seem to break any new ground.

>That InfoWorld named Apple's OpenDoc the winner of the 1995 Landmark
>Technology Award, given to the most significant original idea or advance
>in a current technology each year.

OpenDoc is neat, but does not really have much to do with Macs per se.

>That Power Macintosh 8500 was named "Best Desktop System" in 1995 by
>Ziff Davis's United Kingdom PC Magazine.

Again, what was the competition, what were the parameters, what was the category, etc.?

>I could go on...I could go on for a long, long, long time..but this is
>getting incredibly long as it is. Just because Bill Gates spent half a
>billion $ telling everyone that Win95 is the best things since DOS<sic>
>the fact remains that Win95 is like Mac85...BYTE said it best when they
>said:
>"To see tomorrow's PC, look at today's Macintosh."

Win'95 sucks... Thankfully, on PC's it's not the only thing. Now, how many OS's can you run on a Mac?

>Um...okay.
>The 604e (which PowerComputing sells with UltraSCSI-Wide RAID arrays) will
>still crush the either the PentPro or the Cyrix 6x86...esp. if either of
>them is running Win95...give the PentPro WinNT...and it'll be closer...but
>not much.

Uh, how much will such a system cost? In the same price range, why not compare Power Computing with an Alpha-based system, or a MIPS-based, system (either of which would eat it for lunch), or even a PPC-based system running a superior OS (say, NT)?

>And once the 620 and Copland come out it's just going to be sad. The
>performance gap is growing, it has been ever since Mac started using
>RISC... and it's only going to get bigger until at least '98 when Intel
>starts making RISC chips.

Hmm, have not seen the gap growing that much. In any event, Copland is not out
yet, and neither is 620. OTOH, PPro and NT 4.0 are out and useable.

>Look, I was born and raised on PC. I don't have anything against them,
>they have their uses...I guess...I just got fed up with spending days to
>install hard drives...fighting for hours to play games with my 16MB of RAM
>when the problem was that there wasn't enough under 640K!
>I'm a consultant and I spend all day with both systems...and there's no
>question who gets their work done faster and who needs more help from me.
>I hope that Windows does stay powerful for a long time...it will keep my
>pockets full! But on my desk, you will always find the MacOS.

Well, you don't have to fiddle with those if you have a real OS...

My point, from the beginning, though, was that comments re: Commodore and Atari,
which where completely ignorant...

The above does not necessarily represent views of my employer,
my educational institution, or of myself.

boris-m@tensornet.com (Boris Molodyi) writes:

>OpenDoc is neat, but does not really have much to do with Macs per se.

It has a lot to do with the Macintosh in that it has, so far, only
been released for that platform.

>Uh, how much will such a system cost? In the same price range, why not compare
>Power Computing with an Alpha-based system, or a MIPS-based, system (either of
>which would eat it for lunch), or even a PPC-based system running a superior OS
>(say, NT)?

I priced a PowerComputing 225MHz system for $6000 (for a friend with money)
It has:
1MB L2 cache
225MHz 604e
8MB IMS 128-bit video card
2 SCSI-2 buses
4MB XClaim 64-bit video card
64MB RAM

8x CD-ROM
4GB AV Harddrive (7200rpm)
Keyboard
Mouse

That's not a bad price for such a stacked system. Most people would want half the RAM, only one video card (that's not as good) and a 2GB non-AV drive. Look at the web site for pricing for less robust systems.

>Hmm, have not seen the gap growing that much. In any event, Copland is not out
>yet, and neither is 620. OTOH, PPro and NT 4.0 are out and useable.

PPro does not compete well with the 604e so we don't have to hold our breath for the 620.

>Why not take a P6-200 with an UltraSCSI-Wide hard drive (something more
>appropriatem given the price range of your crappy 604e) and see which one is
>behind then?...

Well, since you can buy the same PCI cards for both we should just compare processors. Here are some ByteMarks:

	Int	Float
200-MHz 604e	4.3	4.4
200-MHz 603e	3.8	2.6
200-MHz Pentium Pro	2.8	3.5

Hmmm, and let's remember that that is for a 200MHz 604e with 512K L2 while

```
PowerComputing sells a 225MHz 604e with 1MB L2.

Absolutely untrue.  70% of browsers support MOST forms of Netscape
Extensions, which means that, by using them, roughly 1/3 of the Web
audeience is excluded.
---

>PCI is a bus architecture designed by Intel. It has widespread support but
>it was created by Intel and is, largely, controlled by Intel. Just like
>netscape extensions. What is the difference.

The difference is, one can successfully extend his system using VME, NuBUS,
or PCI.  Many times, one cannot successfully web browse without "Netscape
extensions."  Also, PCI bus is hardware, WWW extensions are software.

It's true that, when you look at niche markets, Apple seems healthy.
But look at the overall sales and financial picture, and things change
drastically, for the worse.
---
Remember, Atari was once an owner of over 85% of the MIDI and computer
music markets. It was one of the few markets they invested money in
to keep. Even now, after Atari Corp.'s demise, the TOS machine is going
strong in music. Did niche market numbers for Atari paint a rosy picture?
Yes. Was that picture financially realistic? I don't think I have to
answer that one.

Can't tell you much about the Amiga (although you could call Oregon Research
and see what they're selling - I know they were supposed to release a
/commercial/ web browser last month); but if you take a look at
http://www.3rdplanet.com/~starship/atari.htm, you can get all sorts of
references. The Network ST home page even has a screen shot of a full-screen
GEM window running on a Falcon.

I know where to buy an Edsel - or a Lexus, or a Mercedes. That doesn't mean I want any of those cars, or that they are the best choice for /me/. If the Mac is the best choice for /you/, that's great - but you should be telling people over in comp.sys.mac.advocacy if you don't want to hear differing opinions.

The GIF standard is copyright CIS - and CIS made the "changes" which turned GIF87b into GIF89a. The Netscape extensions are proprietary; they aren't even copyright anyone in particular, much less accepted by a standards committee anywhere.

C is not very portable when you need to use any form of interaction besides stdio. Tell you what, write a C program that displays a window prompting the user to enter a number and then shows the square of that number in a window. Easy right, now make sure that it runs properly on SGI, Sun, HP, Macintosh and PC (under linux, OS/2 and Windows). Not so easy, is it?

Hi,

Can anyone point me in the direction for materials to program for the
2600? Everything from writing the code to burning the chips? Any

help would be appreciated. Emal: <georgeb@metronet.com>

Thanks.

George Broussard

Ha.

: Tell you what, write a C program that displays a window prompting
: the user to enter a number and then shows the square of that number in
: a window. Easy right, now make sure that it runs properly on SGI, Sun, HP,
: Macintosh and PC (under linux, OS/2 and Windows). Not so easy, is it?

Try X. X runs on SGIs, Suns, HPs, Macs (under mkLinux), PCs (under
Linux), and a bunch of other systems. You write *one* X app, and
recompile it under each platform (due to the differing processors), and
it'll work.

  Correct.  Java and Shockwave are standards.  They are not part of the
HTML standard, however.

I wonder why this is? Could it be: no standardization?

What you are advocating is precisely what you descibe below.
Instead of a cross platform API, you want us subjected to 3 or
more forms of MFC, toolbox and whatever OS/2 uses.

The SGI, Sun, HP, and linux boxes however will be no problem to
write in a cross compatible fashion.

STonX is an example of this.

Thanks to that vile X Consortium...

According to Netscape, Navigator represents 80% of the browser market.
The source isn't that great but the number seems reasonable. Internet
Explorer probably represents at least 10% of the broswer market
and it supports netscape extensions.

>The difference is, one can successfully extend his system using VME, NuBUS,
>or PCI. Many times, one cannot successfully web browse without "Netscape
>extensions." Also, PCI bus is hardware, WWW extensions are software.

OK, then please explain the difference between OpenGL and Java?

Well good. If it's actually better than Mac, then I hope it finds its way
to my desktop...still, I doubt that finding software for it is anywhere as
easy as it is to find for my 7500...maybe that will change, and if it's
better, so will I.

> >Do you know any place around Columbus, Ohio that I could see Atari's TOS?

How true...as a little kid I remembered watching my uncle's Amiga (I have
no idea what the model was)...I thought it was way cool, and was sad they
seemed to die...

Anyhow...I want to learn more about Atari.

But I'm still happy with the Mac on my desk.

Thank you for the education.

Ha ha ha. I installed a CDROM changer on a 7200 last month. total time was less than a minute. Just hooked the SCSI cable to the SCSI port which is available on all mac desktops except for earlier Mac 128 and 512.

Well, first of all, Mac is embedded in many more nitches than Atari was.
Mac doesn't have to come up against Mac. But you are right...only time
will tell.

Hey, I just responded to a post that was already up there, and in my
orginal post, there were many points about Atari and Amiga...now I'm just
making sure that everyone understand that there are facts behind my
words. If I must stop, I will.

August E. Brunsman IV
(and it's Augie)

Well...it kind of does...see, a Lexus is better than a Ford...but there
are a hell of a lot more Fords...and I don't think Lexus is going out of
businesses any time soon...

No, not best at all...you can buy lots better ones (starting at about
twice as much for about %10 more "betterness"). The point is that they
have stong markets.

>

Believe it or not, Italians buy computers made all over the world...and
are open to the same market that the us and other companies are...it says
nothing more than that Italians have taste.

>

Dude...that is. It's talking about ALL computers...the term "personal
computer" (found above) includes PCs as well. Those numbers include every
single PC maker that ship internationally (which is just about all of
them). Just like the Italian numbers.

A vast hord! With INCREDIBLY useful technologies like OpenDoc, QuickDraw
GX, QuickTime 2.0, QuickDraw 3D, their digital camera technologies,
QuickTime VR, their BEAUTIFUL case desinge on the 7200, 7500, and
7600...their new PowerPC motherboards, the DIMM 128K data path on
them...and tons, tons more.

The people say what the people say...you can say what you want to say...
I've worked with plenty of Win95 machines that couldn't run for more than
half an hour before they would crash...

>
> >That Mac OS was the clear winner in the Software Publishers Association's

Well...you can read all about it at Apple's web page...it was highly ammusing...

The details only make it that much more painful...the kid was infact,
randomly picked out of the croud watching them...

The many different PC adds add up to many times more what Apple was giving them.
>
> I'd really like to know what was so new in those Macs? They did not seem to
> break any new ground.

Go buy one! Jesus! They are the incredible! They brought DIMMs, great
built in video capture, daughter cards, PCI compatability to the MacOS,
DAVs, and zillions of new software featrues...like the above mentioned
QuickDraw GX and 3D...incredible thigns.

>

many OS's
> can you run on a Mac?

Well...um...well, with a PCI DOS card you can run anything you could run

```
on that PC (plus MacOS)...with SoftWindows right now (w/o and hardware
modifications at all) I can run DOS,Windows 3.1(1), and Win95...
And come the end of '96 when MANY (there's a list in one of my eariler
posts) companies start making CHRP (common hardware referene platform)
boxes you will be able to run what ever you please on them...MacOS, Lynux
(sp?), DOS, OS/2, and even Win95.<g>

> >Um...okay.

NT...superior OS...that's beyond laughable.
And Alpha systems cost WAY, WAY more.
As do any UNIX boxes.
>
> >And once the 620 and Copland come out it's just going to be sad.  The

> Hmm, have not seen the gap growing that much. In any event, Copland is not out
> yet, and neither is 620. OTOH, PPro and NT 4.0 are out and useable.

First of all, my 100Mhz 601 (which is WAY, WAY slower than a 604e)
absoultly crushes my friends P5-133...and that's a compairison between
Descent running on my box and it running on his, through DOS...in Window's
based tasks the difference is even sadder.

Dedicated and loyal...those are two words that describe Mac users very
well (%39 of them according to a study that MacWorld did...how much you
can trust that I don't know...still...I know I am, and I know at least
fifty other people that are personall...and I've never been to a MUG in my
life).

Why would I need to spend $300 for ram? 16 megs go for $120. Why would I need a Centronics cable? $100 for one is absurb. Why would I need a monitor adaptor that costs $50 when Sony and Viewsonic bundles one? Why would I need to spend $200 for a keyboard when one can be had for less than $50? 500 meg HD is sufficient for most people but to include a extra one can be had for less than $200 for 2 GIGS. Must be expensive on your side of the Atlantic to support the welfare state.

>
> And if you somewhen need to change the internal clock battery - they'll
> ask 400 US$ for that.

ROFT.. You mean they charge that absurb amount to change a clock battery?
Must be double for the Falcon..

> ---

He he he. The Midi market was never huged when Atari supposely owned the market. Atari had a lousy mix of products to begin with. What killed Atari was their inability to serve that market such as upgrading thier line in a timely fashion and in enough quantity. Atari took the midi market for granted and did not really do a credible job of supporting it.

Apple is currently in many niches and doing quite well. Another independent study was recently released that Apple will increase thier share of the K-12 market.

August,
You obviously had little trouble finding support for Atari systems.
After all, you're here! All you'd have to do is post in
any Atari support group, tell people what you need to do, and, in
most cases, people will tell you what software to get and where.
It really isn't that hard to find support. You could also
do a search on the WWW for Atari pages. www.toad.net is a very
good place to start. It is true that you have to deal with
mail order for Atari software but it is only a minor nuisance.
You can also download top quality software from an ftp site near you.
-scott tirrell
The Falcon is an incredible machine. You might want to download
the MagicMac demo to get an idea of the Atari desktop.

-snip-
Regarding IDE drives
this has been my experience :^(
I had a WD Caviar, I purchased an IBM
they would not work together, as master/slave, slave/master, whatever.
As _individual_ drives attached one at a time to my IDE controller card they
would work fine, but NOT together.
Next I tried a Seagate IDE, would not work with IBM or WD, only seperately.
next I tried a new IDE card, drives would still not work together.
then a friend loaned my an IDE card, still won't work
Might be my BIOS?
who knows. who cares at this point? I've been spoiled by the Atari.
I just buy any old SCSI drive, plug it in, it works
2 simple.
I _do not_ believe that IDE drives can work together.
theoretically maybe, and there are probably people out there for whom
this works.
me - I'll stick with SCSI :^)

>can you run on a Mac?

Mostly good points but the Mac is about the best platrorm if you want
to be able to use multiple OSs with a good turn of speed. You can hae
MacOS, MagicMac (TOS/Atari), Windows 3.1, DOS, Windows 95, Linux and a few
other minority systems, you also have the PC compatability cards wich
give you real PC power allowing you to truely have 2 machines in one.

>
> Correct. That was one of the reasons IBM compatibles became popular.
>Clones were usually cheaper. Now, of course, IBM controls a pathetic
>share of the IBM compatible market.

Not Correct! There are many Atari clones like the Hades & Medusa and C-Lab now makes the Falcon and upgraded Falcons so I guess uou could call them clones. IBM don't actually control a pathetic share it's about 8.8 percent, I say thats quite good considering the huge number of machines out there especially as they paid all the R&D costs and had to compete with people that just copied it.

>: And before '96 is over the 620 will be shipping, a 64-bit chip, while

Wether or not the Pentium is or is not 64 bit is a stupid argument, if it can't use 64 bit mode WTF is the point? Car analogy time:
Customer: How many cylinders does this model have?
Salesman: If you look inside the bonnet here you will see that it has a 64 clinder engine although there is no way to access 32 of them.
Customer: Oh that's better than the 48 clylinder model then.......

>yesterday? Which is better?

Compare a machine using the same number of the 604's as Intels machine uses Pentiums and the Intel machine looks like the technology is the technology of yesterday (and more expensive too), the technology of yesterday is the Pentiom and the 604 machine is better. I don't see your point.

Well, but what does it say about qualities of MacOS? Nothing...

>Believe it or not, Italians buy computers made all over the world...and
>are open to the same market that the us and other companies are...it says
>nothing more than that Italians have taste.

I believe that. But again, satisfaction rate does not mean much. There are lots of people satisfied with their FOrd Escorts and Honda Civics, but Lexus still is a better car B^)

>Dude...that is. It's talking about ALL computers...the term "personal
>computer" (found above) includes PCs as well. Those numbers include every
>single PC maker that ship internationally (which is just about all of
>them). Just like the Italian numbers.

OK, it still isn't. Assume that Apple has even an incredibly high market share of 15% (it probably does not). It still means that 85% market share belongs to various PC clones.

>A vast hord! With INCREDIBLY useful technologies like OpenDoc, QuickDraw
>GX, QuickTime 2.0, QuickDraw 3D, their digital camera technologies,
>QuickTime VR, their BEAUTIFUL case desinge on the 7200, 7500, and
>7600...their new PowerPC motherboards, the DIMM 128K data path on
>them...and tons, tons more.

Hold it, hold it...

It is all nice and well, but let's see... DIMMs (and better memory schemes) were known to man long before Apple introduced them. And by the way, they only have 128 bit data paths, not 128K (that would be cool, though). Higher data paths were used before.

New PowerPC motherboards... Yeah, so? People come out with new Alpha, Intel, MIPS, SPARC, etc motherboards all the time. What makes Apple's so unique?

Beautiful case designs?! Beauty is in the eye of the beholder, innit? 7xxx series aren't ugly, but it 1. does not say anything about what's inside, and 2. there are tons of equally cute machines out there.

QuickTime VR. Yeah, nice, but so what? I much prefer actual reality.

QuickTime 2.0. Yeah, but what is so revolutionary that it can't be done on other systems? As all QT, it's bloated and rather ineficient.

QuickDraw 3D. Yawn. I was running system with OpenGL for years, and it was available even before that.

QuickDraw GX is nice, but how many people really need it's advanced typographical capabilities? Most of it can be done with Unicode just as well, too, and Unicode has been around for quite a while.

OpenDoc, again, isn't anything earth-shattering. There was a lot of talk about things like it a few years ago, and OpenDoc is just one of many projects that managed to survive until now.

>The people say what the people say...you can say what you want to say...
>I've worked with plenty of Win95 machines that couldn't run for more than
>half an hour before they would crash...

Win95 isn't stable, I agree with that. Half-digested DOS code and all. In my experience, though, MacOS was significantly less stable than NT, or even TOS.

>Well...you can read all about it at Apple's web page...it was highly ammusing...
>The details only make it that much more painful...the kid was infact,
>randomly picked out of the croud watching them...

Ahem, got an impartial Web page for it?

>Go buy one! Jesus! They are the incredible! They brought DIMMs, great
>built in video capture, daughter cards, PCI compatability to the MacOS,
>DAVs, and zillions of new software featrues...like the above mentioned
>QuickDraw GX and 3D...incredible thigns.

Well, they might have brough it to MacOS, but the "other" platform had PCI, daughter cards, video capture, DIMMS, EDO RAM, OpenGL, Unicode, etc., etc. long ago. What's so incredible? That Apple finally caught up?

>Well...seeing as how the MacOS is the only OS that runs it...yeah.

It's supposed to be an open standard running on all major operating systems, isn't it? If Apple won't do that, OpenDoc will be about as useful (and open) as a spoiled can of spam.

>Well...um...well, with a PCI DOS card you can run anything you could run
>on that PC (plus MacOS)...with SoftWindows right now (w/o and hardware
>modifications at all) I can run DOS,Windows 3.1(1), and Win95...
>And come the end of '96 when MANY (there's a list in one of my eariler
>posts) companies start making CHRP (common hardware referene platform)
>boxes you will be able to run what ever you please on them...MacOS, Lynux
>(sp?), DOS, OS/2, and even Win95.<g>

Yeah, sure, so I can plug in an overpriced card with 486 on it and run Windows programs. How exciting... SoftWindows is emulation. We could do it on Atari 10 years ago (PC-Ditto).

By the way, when CHRP comes out... it will run NT, MacOS, most probably Linux. It will have to run DOS in emulation, as no one is going to port it. And as far as I know, OS/2 for PPC was scrapped, so it will have to run in emulation as well...

>NT...superior OS...that's beyond laughable.

Well, _I_ like it better. Much more powerful and stable that MacOS will be, and offering real multitasking, security and stability now, not in 5th upgrade to Copland.

>And Alpha systems cost WAY, WAY more.
>As do any UNIX boxes.

Unix boxes are expensive (unless you run Unix on x86), but Alpha systems are quite comparable in price, and given Alpha's speed advantage, they have better price/performance ratio.

>First of all, my 100Mhz 601 (which is WAY, WAY slower than a 604e)

>absoultly crushes my friends P5-133...and that's a compairison between
>Descent running on my box and it running on his, through DOS...in Window's
>based tasks the difference is even sadder.

Well, I've never compared Descent. We have, or had, at various times, 3 Macs, 2 Ataris (ST and TT), one NT box with 90MHz Pentium, and one W95 box with P133. Mac has 601 accelerated to 82MHz (it was 6100/60 originally) with 256K external cache. NT box outruns it, in real world applications _I_ use by a factor of about 2 at least. Surprisingly enough, W95 isn't much faster. (It'l become NT 4.0 as soon as it ships). PPC by itself is an OK chip. However, with MacOS on top of it, it's quite a dog...

I've tried two of my three accounts on different services now, and both
report that a.b.c.a does not exist. While you may have created it
locally, it isn't available on the Sprintlink backbone.

In article <31EBC63B.372B@ccm.jf.intel.com>,
RichardX_Tietjens@ccm.jf.intel.com says...
> I've tried two of my three accounts on different services now, and both
> report that a.b.c.a does not exist. While you may have created it
> locally, it isn't available on the Sprintlink backbone.

Hmmm... I *do* see it from two totally different accounts
(one on Primenet, the other PSI). My only guess here is that
some servers don't automatically start carrying new groups created
in the alt.* hierarchy.

The group *was* created by going through all the "official"
channels and such, so it really should be out there.

Any new alt.* group created for Ataris may have the same
distribution problems as a.b.c.a8, so, if nothing else I suggest
we at least find out why this one hasn't propagated all the
way through yet.

Oscar

Guy, I am including the balance of the comp.sys.atari.* groups in this discussion along with alt.config; it may be appropriate at this time to include news.groups as well, but I will wait for comments before doing so.

Guy Harrison wrote:
>
(I include here quotes from a couple of previous posters in the same thread - to save time, I'll reply directly to these as well.)
> >> Since the comp.* group died for lack of use, I expect the alt.*

> >> this group are primarily interested in a place to illegally
> >> repost copyrighted software.

This comment (whose poster may remane nameless unless he wishes to step forward at this time) is frankly slanderous. As the proposer of the new groups, /and/ an established software author, I take personal umbrage at the expressed implication that I am a pirate. I suggest you ask the former BBS sysop and the author of RatSoft BBS how I feel about pirates - of course, he may not be aware of just who blew the whistle on his pirate activities.

> >> Annius V. Groenink <avg@cwi.nl> posted messages to the group asking
> >> whether anyone still found it useful and the vast majority agreed

> >> the moderator and the readership, it is now removed.

This is patently untrue. Annius posted one or two messages in comp.sys.atari.st remarking that he was planning to have the group rmgrouped, but the "vast majority" most of the readers most certainly did NOT agree to remove the group. I think most of us simply found it impossible to get anything past the moderator. Personally, I voted to retain the group.

An now, back to Guy's remarks:

> I attempted to post to this group on more than one occasion - at
> no time did I see any information on how to do so, and received no
> replies from attempting to do so requesting suitable help. It is no

>
> guy@swampdog.demon.co.uk

It certainly appeared to me that the rmgroup was "railroaded" though.
No voting results were cross-posted to the comp.sys.atari.* groups. By
that time, however, the rmgroup was a /fait accompli/, as they say, so
there was little anyone could do about it.

----
My apologies if this appears twice. My news reader barfed on my first attempt to post.

One of the problems with setting up an alt.binaries group is that, as has been pointed out earlier, many sites don't get parts of (or in a worst case scenario) the entire alt hierarchy. The university here just lopped off the entire alt.binaries tree several months ago because the spool time on the server was less than six hours and the system was thrashing itself to death.

I would propose that we try to make any group we want to see created an "official" group in the comp.binaries hierarchy. For those of you uninformed on what that means, here is a brief summary:

1) An RFD (Request for Discussion) goes out where the merits of creating the newsgroup are discussed.

2) A CFV (Call For Votes) goes out where the proposed newsgroup is voted on. In order for a group to pass, the number of YES votes must be 2/3 of the total number cast, plus the number of YES votes must be at least 100 more than the number of NO votes cast.

In theory, I support the creation of a binaries group - but I would rather not see it in the alt tree. Alas, I'm not sure we would have enough people voting in favour of the proposal to meet the second criteria for passage.

Any thoughts?

(Oscar Fowler mentions the already existing alt.binaries.comp. atari8bit he started.)
I've been wondering about this. Rich Mier said correctly that all that's in a.b.c.a. is some spam. And Rich Tietjens believes he should be able to see it. I don't think many people can see it. I also don't think many people can see the new a.b.a and a.b.a.d. Somebody said these groups have to be added to the usenet groups specifically by sysadmins, or systems are set up not to have alt or binaries groups added. I can see the new Tietjens groups and the old a.b.c.a. Something that has not come up in this thread is the A8 vs ST thingy. STers generally don't like to mess with A8 stuff, I think. STers sorta kicked the 8-bitters out of Delphi (rumor). Anyways, personally, I like /prefer the alt.binaries.comp.atari8bit idea and keep it separate from what I would like to see... -> alt.binaries.comp.atariST. BUT, I do appreciate the efforts of both Mr. Tietjens and Mr. Fowler and whatever you guys wanna do is fine with me.

Thanks for your comments, James. I don't know anything about Delphi's history, but my feeling is that, if it says Atari on the logo, the user is (or should be) my friend. We have enough enemies, we don't need to make more within our own ranks. Thus, if someone objects to the placing of 8-bit software in a.b.a, I suggest they form their own binaries group (they could call it alt.binaries.atari.68k-bigots I guess).

What's really strange is that, although I am told others can see the two new groups I created (or tried to), and apparently can see a.b.c.a.8, my server (at my personal account) shows none of the three - but it does show a number of "warez" groups, even though the sysadmin has issued generic warnings that trading of warez will not be tolerated. I really don't understand the mentality that says "we'll make this available, but if you use it, we'll punish you." I don't /want/ to use it, but it seems to me that if the use is to be monitored, it would be much less work to simply rmgroup anything with "warez" in the groupname.

I'm very sorry if this is not the appropriate newsgroup for this...

ATTENTION! LOTS O' FREE 8-BIT STUFF!

I'm leaving the country in a matter of days, and would like

to ship all of this stuff to the first serious 8-bit enthusiast

who gets back to me... the sh Televsion (use as monitor!)(works fine as a TV

except it needs new volume control)

Power supplies for all of above, etc.

SOFTWARE:

TONS of disks with lots of stuff; mostly games (fun ones!) however, but there's ICD's SpartaDOS and Atari's DOS v2.0, v2.5 and v3.0, a C compiler (!), AtariWriter Plus (word processor with spell check), Text Wizard (another word processor), Broderbund's The PRINT SHOP, Atari Assembler Editor, Atari Macro Assembler and Program-Text Editor, PASCAL compiler

BOOKS:

The Atari BASIC Source Book (includes the interpreter's actual source code)

Mapping the Atari (good Atari memory guide)

Compute's First Book of ATARI GRAPHICS

Inside Atari Basic

101 Programming Tips & Tricks for Atari Home Compuers

Atari - An Invitation to Programming 2

Atari - An Invitation to Programming 3

Understanding Atari Graphics

Advanced Atari BASIC Tutorial

Manuals for AtariWriter, Text Wizard, Atari 1050, Atari DOS 2.5, Atari 130XE, Atari 1200XL, Assembler Editor, Percom Drives, Macro

Assembler, PRINT SHOP, Kyan PASCAL,

Atari BASIC, ICD P:R: Connection, ICD

SpartaDOS

Atari "Demopacs" (#1 - #8, info on Strings, Data Files,

Programming, Color Graphics, Advanced

Graphics, Advanced System Features, etc.)

I can handle moderation - either manually or automatically. That's the
easy part. Getting the RFD accepted and passing the CFV is tough.

So if this thread no longer applies to your group, SORRY!

Listen people, this is my take on the situation of this OS vs. that OS:
UNIX (the plain Jane variety) is confusing, obtuse, archaic and downright confusing.
So, there's NeXT, Linux, etc. to alleviate the command line confusion ("what do I type?" again, Better check UNIX for Dummies!) Personnally, a) I can't wait til they port Linux to my particular PPC and b)if I've got the money next month, I'll buy a NeXT cube regardless of its "obsolescence".
It's just too cool!
DOS-based; EEK! get away! I'm warning you! I've got a gun! No but seriously, my Windoze friends assure me that it works great for them, but then again, they're
all hopeless hackers and like messing-up systems and writing viruses and such.
PPC/PowerMac, well the long & short of it is- I'm biased! When my wife and I looked at our options our only real option was the Mac, our decision was totally need based-no other platform did what we NEEDED.
And honestly, I credit my now burgeoning interest in computers to Apple and Apple alone. Our college has plain Jane UNIX and it was so un-intuitive my interest in computers was squashed for the first 2 years at college.
OTHER:Apple II, Amiga, Atari, TI, ad nauseum. Well , I was given a //e and bought a IIGS for dirt cheap...now I'm teaching my self BASIC and PASCAL-hey if you doubt their usability check out what a serious A2 user is doing-4 years obsolete & they're still going pretty strong. A German compnay is even releasing a "Modern" Apple//e for $150 U.S. Amiga...well do I really need to say anything; another company is attempting to revive the Amiga w/a newer chip (check the Motorola site for details).
If I missed anyone, just chalk it up to inexperience.
PPCP-makes much of this irrelevant, last I heard it'll run MacOS, WindozeNT, OS/2, Linux, AIX, and others as they become ported, hell, rumour is even the AmigaOS will even be ported to the PPC!
So I suppose the long and short of it is-Mac for ease of use, UNIX for "raw" power, and -whatever- for the compromise situation. If I won a Windoze 95 machine I'd keep it and try to learn how to use it to see first hand what all the grief is about, but I'd never buy one. That's simply a personnal choice based on
observations, other users opinions and what I've read about it from the "pros" e.g. the IBM site has it's 15 q's to ask M$ about the 95 and basically lambasts it,
legitimete(sp?) complaints only.

"Try browsing 10 hours in my OS" seems to apply before people gripe about other OS's they obviously never used.

AHAHAHA! I wouldn't normally laugh at this kind of thing, but because it has to do with something so near and dear to you, I just can't resist.

Why don't you tell us about Apple, Peter? Where should I start? Perhaps with the fact that Apple is going to take over $700 MILLION in losses? Seems that Amelio is going to attempt some huge one-time write-offs and losses to get the company back in the black again. But this is gonna hurt. Really bad.

Kinda reminds me of the Atari of the mid-80's.

Also, Moody's downgraded Apple to JUNK bond. And industry analysts don't expect Apple to see a single profitable quarter this year?

And what's this I hear about a significant portion of the losses to be taken are from back stock and inventory? I thought Apple's computers were selling like hotcakes? I think this mess is more from mismanaged inventories than back-orders. Apple was just trying

to sugar-coat the situation, now the truth becomes known.

> That stock has done wonders for the higher ed channels. Our campus reseller
>has saw sales tripled with the dollar amount over a million.

I was at CompUSA Saturday, and I watched the PC and Mac displays for a while. What a contrast. The PC section was filled with consumers (I counted 19), while the Apple section was neglected, only 3 customers were there (and 2 were kids!). Nice stacks of Macs here,

too, you can't blame sales shortfalls on lack of stock.
Apple has a long and rocky road ahead of it. No doubt Peter will
respond to this, and tell me about how things are turning
around and that he has info that he can't disclose and how I'm in
denial. Yeah, sure, whatever you say, Peter. Should I compose
your response? I'd probably spell it better than you.

>That stock will most likely be pushed into the higher ed channels which has
>been the case at our reseller.

This is just so ironic. Peter flames us Atarians for
being on a sinking ship while the moron can't see that his
own ship is sinking! AHAHA! What a fool.

>He he he..The ship is floating, thank you. Now whoo is a DUMBASS nnow?

See you on the bottom, Peter.

0> I will see you on the top..

/Kevin

>
> Any thoughts?

I have a proposal all written up. It was already shot down in flames after being submitted to the group mentors, but I am more than willing to let someone else have the text to modify as they see fit.

Getting 100 votes is the toughest part - but I think it's likely to be a lot easier now than it was before I brought the subject up in the entire comp.sys.atari.* tree. I suggest a "straw" vote - who wants to be the vote-taker? We will probably want to take a straw vote on each of the following points:

Should comp.binaries.atari (all systems) be created?
Should comp.binaries.atari (all systems) be moderated?
Should comp.binaries.atari.8bit be created?
Should comp.binaries.atari.8bit be moderated?
Should comp.binaries.atari.st be created?
Should comp.binaries.atari.st be moderated?

I suggest that, if we can find a vote-taker, and if we can garner 100 or more votes in favor of any of the above "straw" proposals, that we then submit the formal RFD and try for the group. I'd also recommend a .d group (discussion) be part of the proposal for each binary group desired, so as to keep binaries and discussion seperated (in consideration of those who'd like to discuss the matter but don't have selective download ability).

For most of the OS flamers, it's basically an emotional insecurity issue. Some people incorporate external factors such as who they associate with, what brands of clothing they wear, what car they drive, or, in this case, what OS they use, very tightly into their definition of themselves. Therefore, using an OS other than the one they've chosen to identify with directly challenges their perceived levels of computer expertise, at the minimum, or their whole sense of self-worth, at worst. Fortunately, most of them outgrow it once they discover other things to add meaning to their lives.

Hi,

I'm looking for the drivers and the Jumper documentation of the
Thernet VME card called RIEBEL ...

It's very very urgent !!

If you know I could find this or is you got them ... please contact
me by email as quick as possible !

With Best Regards,

 j> Well, all the ones *I've* ever seen.

Old thread, sorry, I just got time to consider this.

MS-DOS doesn't support a mouse. You have to run a third-party mouse driver, eating up precious "conventional" memory (and there's another reason for avoiding MicroSlop products - at home, I don't have to wonder which "type" of memory a given program needs).

Novell Netware doesn't support a mouse. Period. There are no third-party drivers, or any other way AFAIK, to add the facility.

Win95 supports some mouses but not others. If you happen to have one it doesn't like, you're out of luck.

I could go on, but frankly, who cares? I have an assortment of OSes available, and I use the one that is best for the purpose at any given moment.

The new 040 clones will be a flop because the price/ratio is poor. For less money, 200 mhz Powermacs and Pentiums can be had plus the ability to use inexpensive CDROM encyclopedias such as Groiler, Encarta, Worldbook and many more. Plus high quality and inexpensive browsers are not available as well.

```

Yes, nice..
Shut up your Mac and buy a Pentium...
And please, chance the newsgroup!!!!

Buy a clone, the rest will be cheaper for all other buyers..

(It's much better for all atarians)

regards, robert

I absolutely agree with much of what your saying, Peter.
---
1) Inexpensive Web browsers are not available. We have to deal with
non-expensive (free) ones like CAB, STiK, and the like.
---
2) Groliers isn't available - directly. We need to use Sara. Of course,
that will drive off all the people who use computer encyclopedias to get
work done every day.
---
3) The clones weren't designed to cater to the hard-core Mac fanatic or
PC bigot. They were designed to appeal to folks who need high-performance
versions of the TOS OS for its unique and legacy applications.

Capice?

Will okay.. Next month at MacWorld, Umax using the Supermac label will release
a 140 mhz Mac OS clone complete with 16 megs, 8x CD and 1.2 gig for $1500...The
PPC 603e will be on a daughter card. Isn't competition grand?

The 040 hades is $3000 or more..Why does it cost twice as much or more and does
less?

 GREETINGS..

Musical Contest "Musica con Atari" - Announcement of competition

Art. 1 - Announcement of competition
Published and unpublished songs can partecipate at "Musica con Atari"; all songs must be sent not after the 31st October 1996 at:

Emmesoft Via San Donato 49 10144 TORINO (ITALY)

together with the registration fee of 33 (thirtythree) U.S. dollars for each song sent (a maximum of 2 songs are allowed for each Section). Money can be sent cash, via international post or bank transfer.
Registration fee can't be returned.

Art. 2
"Musica con Atari" Musical Contest is reserved to every musician (even outside Italy), hobbyst or professional. Competitors must be age 18 or over.

Art. 3
Competitors can partecipate with one or more song. Maximum duration allowed for each song is 6 minutes (for the "Classic Section" 15 minutes). While sending the song(s) musicians must include a little curriculum with their full address.

Art. 4
Sections available are:
Arrangment (songs not composed from the competitor, but rearranged in a creative way)
Original Compositions (original works composed by the competitor)
Classic (transcription of classical scores)
Transcriptions (famous songs faithful transcription)

All songs must be in MIDIFile format standard General Midi. Magnetic tapes or digital formats (DAT, CD ecc..) are excluded.

Art. 5
Jury is composed by 5 members. After the competitive examination of all the songs received according to the terms of art. 1 the jury will, at his unobjectionable decision, award the prizes given from the sponsors. The 4 winners of the Sections will receive the prizes during Atari Days.

Art. 6
All winners will be promptly informed to be able to be present at the awarding of the prizes. International winners are not obliged to be phisically present during the awarding of the prizes. All delivery and shipment costs to send prize to the address of international winners will be at winner's own expenses.

Art. 7
Jury's verdict is definitive and inappellable. While partecipating at the Musical Contest competitors of the prize will bind themselves to accept the final verdict without rising objections. This announcement of competition is in English and Italian and is composed by 9 (nine) articles. For every controversy will be competent the Torino Court and the italian laws.

Art. 8
All floppy disks sent, at the end of the Musical Contest, will not be sent back.

Art. 9
Jury will examine all the songs received in the days 8th and 9th November 1996. During Atari Days the Atari press will be informed of the name of the winners.

Musical Contest "Musica con Atari" ENTRY FORM

Messrs. Emmesoft,
the undersigned _________________________________
born in _____________________________ date of birth _______________________
address ____
________________________________telephone number _______________________

encloses herewith a floppy disk containing the followings MIDIFile standard General Midi songs (please write songs' title and author):

____
____
____

asking in this way to partecipate at the Musical Contest "Musica con Atari". The undersigned asks to compete with the above mentioned song(s) in the Section (please tick the preferred section; if You partecipate with more than one song please state the section even at the side of the titles You have already indicated):

_ Arrangment (songs not composed from the competitor, but rearranged in a creative way)
_ Original Compositions (original works composed by the competitor)
_ Classic (transcription of classical scores)
_ Transcriptions (famous songs faithful transcription)

All songs must be in MIDIFile format standard General Midi. Magnetic tapes or digital formats (DAT, CD ecc..) are excluded.

The undersigned encloses herewith:
1- floppy disk containing the indicatedMIDIFile standard General Midi song(s)
2- payment of 33 (thirtythree) US$ for each song sent. Payment can be either done at:

A-Postal Account 34999102 or

PRESS RELEASE
Atari Days
Announcing the 3rd Edition of the italian Atari Fair

TORINO - 16th july 1996
Emmesoft, the most important italian source for Atari products (located in Torino-ITALY), announces the third edition of the italian Fair for the Atari market, called Atari Days.

This Fair, which has been held for the very first time in December 1994, takes as example similar events periodically held in Germany, France, England, Sweden and USA; Atari Days is the right place to show and demonstrate all latest products and releases for Atari and Atari compatible computers.

The first two editions have had a good success, while this new edition will benefit of all suggestions from distributors and developers to improve Atari Days.

Atari Days - General Information

Where & when
Atari Days will be held in Torino (ITALIA) from Saturday 16th to Monday 18th November 1996; the most important innovation from the last edition is the number of opening days, three insted of two, to grant wider access to the people.

The selected site is the same of the previous edition: the central Hotel Holiday Inn (Via Assietta 3, in front of Porta Nuova's railstation).

The entrance will be ticket regulated (opening hours 10-18) while distributors and dealers pre-registered will get free entrance to the Fair.

First Edition of the Musical Contest
"MUSICA CON ATARI"
Since Atari computers are still strongly used in the musical field, during Atari Days there will be the Musical Contest "Musica con Atari", with over 3 millions Lit. (2.000 $) of prizes.

This Musical Contest is reserved to every musician (even outside Italy), hobbyst or professional.

"Musica con Atari" is sponsored by the most important companies in the Atari market. Between them are:

Charlie Lab
Steinberg
Emagic
C-LAB

Between the prizes awarded are a MIDI Digitar Midi-guitar, software Cubase Audio, Notator Logic sequencer.

For more detailed information and/or to receive the announcement of competition in English (the deadline to send the floppy disks with MIDIFile in General MIDI standard is 31th October 1996) please contact:
Manuela Esterni - phone +39 337 226379 fax +39 11 4374311
e-mail: atarimag@mbox.vol.it

The awarding of prizes of the musicians winners of "Musica con Atari" will be during Atari Days. N.B.: International winners are not obliged to be phisically present during the awarding of prizes.

Reserved AREAS FOR EXHIBITORS
In Atari Days people will find booths for demonstrations of new products and latest releases.
The major distributors and developers in the italian Atari market, together with distributors and international developers, the italian magazine "Atari Magazine" and the french magazine ST MAG will exhibit during the Fair.

Reserved AREAS FOR WORKSHOPS
During Atari Days ther will be Workshops about graphics, MIDI, Multimedia,MIDI etc...

What's new during Atari Days *
Falcon MK-X from C-LAB, the new rack mounted model, based upon licensed Falcon030 technology from Atari Corp.
Falcon Studio II, the all-new Falcon based digital audio workstation
Hades the new version from the Medusa family, with Motorola 68040 processor , 8 Mb RAM and 1.2 Gb Hd
Lithos scan: professional software for Agfa scanners with "direct to disk scanning"
Karaoke Voice Wizard: the latest release from Jurgen Schwietering (of Steinberg fame) of the most powerful Karaoke software for Atari
Notator Logic 2.5: the long awaited upgrade of one of the most famous MIDI sequencer in the world
Yamaha CD Audio Mastering : professional system for mastering Audio CD with Falcon e Cubase Audio
Afterburner, 68040 accelerator board for Falcon
MagiC 5: the latest release of the multitasking OS for Falcon
MagiC Mac e NVDI Mac: Atari emulator for Mac
Gemulator Gold e Laptop: Atari emulator for Windows 95 and for notebook PCs
Background Photos 2: the new all-italian professional textures CD ROM, volume 2

SNEAK PREVIEWS DURING Atari Days
Internet linking with Atari Magazine. Visitors will be able to "chat" with the most important developers from USA Germany, France and England

News on line ON-line newsreading, with the writers from "Atari Magazine",
of the latest news for Atari
World Wide Web exploring, net-surfing of the Atari world on the WEB
Atari Club, meeting with the local Atari users' groups

Why should I attend/visit Atari Days ?
+It's the only one Fair of its kind in Italy!!

For more information:
Atari Days
Manuela Esterni Tel. +39 337 226379 FAX +39 11 4374311
e-mail: atarimag@mbox.vol.it

You're railing on upon the cost competitiveness of ST clones is
perversely ironic.

You are only railing against the vendors(s) you support so much.

Isn't ignorance (petey-boy's) grand?

All of these are red herrings, in that they are _NOT_ HTML-complaint
standards. Thus, frames break on Lynx and a number of other HTML-compliant
browsers. Anyone can design a system and decry other browsers that aren't
compatible with that system. It takes real common sense to adhere to the
HTML specs and extend THOSE.

With Peters piss-poor logic, I could argue that the Mega ST4 has a better
price/performance ratio since the latest version of Netscape cannot view
CVG and STG format pictures. It really is quite a lame argument.

Again, none of my real points are addressed - about the target market for the
ST clones. The target market for a ComputerDirecTT or a C-LAB Falcon Mark X
is the TOS user who wants more horsepower for his computer. The market for
Macintosh is the user too stupid to buy and use a real computer, and too

ignorant to realize he is paying hundreds of dollars too much for what he
is getting from a dying company that has to write off inventory (and one
third of its net worth) due to collapsing sales.

In five years, Peter will be writing messages in Mac advocacy about the
"Apple jihad", and will be extolling Windows 99. He seems to have a penchant
for this sort of thing - never satisfied with what he's got, or satisfied
with the notion that other people can be, and have different needs (and views)
than he does.

Yeah ... for the consumer. I don't think Atari really cares a
whole lot about machines like that.

: The 040 hades is $3000 or more..Why does it cost twice as much or more and does
: less?

I said the same thing when the Mac512 came on the market. :-).
Did you ever think that maybe people like the computers they have? Maybe
they've invested so much in software and hardware peripherals that it's
not economical to buy a whole new system *AND* all new software? Or that
maybe, just maybe, the ST is the best machine for what they need? Hmm ...

HTML is not the only standard out there. Supporting Java and, to a lesser
extent, Shockwave should be goal of any browser creater. I beleive that
frames and tables have been added into the HTML 2.0 standard.

>With Peters piss-poor logic, I could argue that the Mega ST4 has a better

You could argue that having no CVG and STG viewing capability is a liability.
But you would be wrong. I have never seen these types used on the web.
I have seem Java, Shockware, Realaudio, frames and tables.

How can you spurn Apple as a dying company while rationalizing the purchase
of an Atari clone? What would have consider a real computer? A HP workstation,
an SGI, an Alpha? A PC? An Atari?

: HTML is not the only standard out there.

But HTML is a standard --- to an extent. Companies like Netscape, which propose extensions and then integrate them into their browser before they are approved, have cause serious problems in the development of HTML as a markup language. For example, &copy; is the symbol for (c). It's fairly widely used. But it isn't standard, and a lot of browsers (including Lynx) don't support it.

Another problem is the inclusion of incomplete standards. Netscape has included tables and so on. These, fortunately, complied with the draft standard at the time. Unfortunately, something incomplete should *not* be implemented because it leaves no room for change when the implementation is in a major browser such as Netscape. People see that tables are supported and start doing it the Netscape way, even if the standard changes and the Netscape way becomes the Wrong Way. When the Netscape way does become the Wrong Way, [l]users complain that the standard doesn't have the implementation of X thing the right way, and that the Netscape way is undoubtedly superior and works better.

: Supporting Java and, to a lesser extent, Shockwave should be goal of
: any browser creater.

Not always. Java and Shockwave are not officially part of HTML, and while they are certainly useful, they need not be implemented if the author doesn't feel like it.

: >With Peters piss-poor logic, I could argue that the Mega ST4 has a better
: >price/performance ratio since the latest version of Netscape cannot view
: >CVG and STG format pictures. It really is quite a lame argument.

No, the argument would go something like this: "The Atari 400 is obviously superior to the PPC 604 and Pentium MMX chips, because they don't have 6502s." :)

: You could argue that having no CVG and STG viewing capability is a liability.

: But you would be wrong.

Really? What if he has an image in CVG or STG format he wants to view?

: I have never seen these types used on the web.

That doesn't mean that they're not useful.

: I have seem Java, Shockware, Realaudio, frames and tables.

That doesn't mean that they're useful.

Collapsing sales? I think not and according to last quarter results. What is a real computer? A real computer is that you can take it out of the box, plug in the monitor, chord and turn it on and get productive? Or is a real computer is spending weeks to configure and make things right? The choice is yours..

 q> I think that he was arguing the quality on this one. Like supporting
 q> the lastest HTML standards <snip>

If you're referring to the Netscape extensions to HTML, they aren't officially "standards" yet. HTML 3.0 has not been ratified. And MS Explorer has their own proprietary extensions, so it looks like MicroSlop is going to try to create yet /another/ HTML "standard" (which brings to mind so many MS jokes that I can't begin to list them).

CAB /does/ support the standard, HTML 2.0 - anything beyond that is proprietary.

Well, well, looks like Peter's denial of Apple's collapse in sales is about to be brought to an end - check out this interesting info:

Dataquest said that troubled Apple Computer maintained its number three position in the world, but its market share slipped to 5.3 percent and unit
More?
volumes fell 16.7 percent to 840,000 units, down from a 7.4 percent share of the world market and units of 1 million a year earlier.

"Volumes are slipping sequentially, so that makes the current quarter really key," said Dataquest's Brown. "If they slip again sequentially, then it's a problem (at Apple)."

Brown said that Apple has put in the proper measures to strengthen its balance sheet and return to profitability, but he said the September quarter, which is the back-to-school quarter, is a crucial one for Apple.

IDC's U.S. data for Apple ranks the Cupertino, Calif. company as fourth in the United States, with 410,000 units and a drop of 21 percent in shipments, from 522,000 a year ago. Its market share dropped to 6.9 percent, from 10.3 percent a year ago.

"They have had a lot of problems and customers are holding off buying and others have decided not to buy (Macintoshes)," Lewis of IDC said.

He said he is looking for the November launch of a new line of Performa home computers to help Apple, because its home product line has "fallen behind the times."

So. . .

1) Unit sales of Apple computers in the US market have dropped 21 percent, and in the world market, 16 percent - more of a drop in a single period than Commodore or Atari ever had. In fact, only Coleco comes to mind as a computer maker with a more severe sales drop.

---

2) Apple's home PCs are behind the times, and customers are holding back from buying until better news comes around.

Seems to me that Peter will be bashing Mac users in five years, extolling the virtues of Windows 99.

I'm glad I didn't fall for the Macinflop, or the Apple Jihad! :')

Apple Computer - the denial ability of S&L managers, the financial security of junk bond funds, the technology of yesterday.

BR Miller
Boston, MA

If this isn't a flame troll, I don't know what is! Let's see how Petey likes getting soe of his own medicine, mixed with FACT. FACT is, his precious Apple Computer is plunging down the toilet at a rate several times faster than Commodore and Atari.

How contrived.

>Java script works on my wife's system (486DX4/120, 24 megs RAM, 28.8 modem,
>s-3 SVGA VLB w/2 megs VRAM). Readlaudio doesn't. CuSeeMe doesn't. Netphone
>doesn't. Frams and tables do, but tables work on my 1040ST under CAB, too.
>That computer cost me $60. We spent $1500 on /upgrades alone/ on the 486 last
>year.

Technology progresses. Everyone takes the chance that new technology won't be supported on their old hardware. But Peter is correct in

saying that Mac and PC users can expect better support, as far as
Net technologies, than Atari users.

>What's useful depends on the requirements of the user, not on the Marketing

>2.0 compliant, as well - which, under Netscape, I would have to test on-line
>at a Web site, since there's no way to turn /off/ the Netscape-specific
>"features").

Thats great for you but a lot of people like Java applets, Shockwave and
Realaudio. And any computer can do PPC data transfers and text conversions.
Macs and PCs also have good web tools along with the Atari.

Netscape has done more to push HTML (and the WWW as a whole) than anyone
else. They are pushing the industry forward, not always in the best way,
but still in a positive direction.

>: Supporting Java and, to a lesser extent, Shockwave should be goal of

That's like selling a development tool without a debugger. They are certainly
useful but since they are not neccessary, "they need not be implemented
if the author doesn't feel like it."

> That doesn't mean that they're not useful.

A viewer for something that I will never need to view is not useful.

> That doesn't mean that they're useful.

They are useful if you want to view most of the content of the WWW.

I don't know of one but I am confident that page designers will not use
HTML 3.0 until it is supported by the popular browsers. Shockwave and
Java are being used now.

Send me a couple of interesting images in those formats and they'll be posted on the Web at http://www.3rdplanet.com/~starship

>: I have seem Java, Shockware, Realaudio, frames and tables.
>
> That doesn't mean that they're useful.

Java script works on my wife's system (486DX4/120, 24 megs RAM, 28.8 modem, s-3 SVGA VLB w/2 megs VRAM). Readlaudio doesn't. CuSeeMe doesn't. Netphone doesn't. Frams and tables do, but tables work on my 1040ST under CAB, too. That computer cost me $60. We spent $1500 on /upgrades alone/ on the 486 last year.

Not all the stuff that's supposed to be so wonderfull on the Web works for everyone. Intel's newest webphone works ONLY on fast Pentium CPUs, for example (I could have gotten a preview copy from the developer down the hall, but we don't own a Pentium). Being swamped in useless features doesn't make a product "better," either. Apparently Petey-boy finds spell-checkers useless, but as I recall, all Mac software is interoperable, so he /could/ (and certainly should) use it, if he could only figure out how.

What's useful depends on the requirements of the user, not on the Marketing pinheads in Redmond or Cupertino. I need a machine that can do PPP data transfer and convert one type of text file to another rapidly. My Mega STe does that admirably. I also need a machine that can edit HTML and view the results. My 1040STfm does that well (and shows me where the HTML code is not 2.0 compliant, as well - which, under Netscape, I would have to test on-line at a Web site, since there's no way to turn /off/ the Netscape-specific "features").

And when I want to play games, my wife's 486 does that well. Eventually, I'll get a Falcon, because it will do all of that (although I'll keep the MSTe as the mail server, and my wife will keep her 486 because, well, she's a Luddite at heart <G>). But for now, we use the computer that does the job best for the appropriate job - with the appropriate software. In other words, I don't use a chainsaw to carve the pot roast.

>
>Collapsing sales? I think not and according to last quarter results.

Did you read the same last quartes (Q3) sales as me? IIRC the units
sold was down 15 0.000000rom the same time last year and just about matching
the last quarters. Admittedly not collapsing this quarter in
particular but certainly dropping.
I'll mkae myself clear on this one Pete, I don't hate MAc's or Apple,
I have a Newton and am considering a Mac, *BUT* I can not stand you
completely slagging off quality machines like Ataris (with lies) and
making Macs out to be perfect wonder machines (lies agin), just play
it staight and you might make your first friend.

>What is a real computer? A real computer is that you can take it out of the box,

>support. How many is "many"? How many users must want something for it
>to be supported? How many other vendors must support something for it to
>be supported by another vendor? The use of standards eliminates that
>problem.

Great. But I could make the same argument about a word processor. How

many users need to want multiple undo before I support it? Do it
need to support it to be competitive. Well I guess that I'll
wait until it's a standard.

> IMHO, the web is intended as a medium to transport text. There's lots
>of tags to make the presentation better or easier, but the main purpose
>is to transport text. Yes, forms and text entry fields can be useful,

Sure, the Web will probably contain mainly text until the end of time
but that doesn't mean that other formats won't enhave it.

> The same could be done with a short C program, and it would probably
>work better, too. Java certainly has uses, but it's nothing close to
>what the marketroids are making it out to be.

The nice thing about Java applets is that they are very portable and
are fairly secure.

Actually, for anyone that didn't enter the computing world
YESTERDAY, the PC-brainwashing mentality does have some merit.
Some of us remember back when the only thing a PC had going for
it was a name and Macs were more expensive than most cars.

Yet, despite all of this, people still bought more expensive
and quite inferior hardware in droves.

Admittedly, PC's finally did catch up in quality, and Mac
caught up in price (finally). However, their existence is
dependent on quite an insignificant number of original lemmings.

This is total gibberish.

As long as you support the document format, any specific editing
functions supported are quite irrelevant to any standard.

At the highest level, a web browser is a document viewer.
Once you muddle with the document format, you no longer
have an open standard. You have a proprietary file format.

You've gone from JPEG to CVG.

Oddly enough, elsewhere, you have objected to such a thing.

Or perhaps, it is more like: It's fine if those people over there
are locked out, just as long as I'm not put out.

So, in the end, instead of having something like ASCII, we're left
with WPs, SAMs, GEMs, DVIs, TEXs, EZs and interoperability goes
flying out the window...

Hmm, not much I can edit out of that. Oh, well.

If you use the service and like it, send 'em feedback. I think, like most
similar web sites, they are supported by advertising, so any feedback they get
will help them sell the site to more advertisers, allowing them to buy faster
servers and sell more ads... You know how it works. <G>

I just finished updating my Atari bookmarks page at http://www.3rdplanet.com/~starship/atari.htm - the changes are mostly to make it easier to get around on the pages, with some cosmetic mods and a bunch of new links (including a new section, "References," for helping you find out how to do STuff).

There are sections for both 8-bit and TOS-based systems. Pop in and take a look sometime!

Consider system overhead? To you it's system overhead, to us its progress. I suppose ST advocates think the world should sit still and end progress. No sir, I won't give up Quicktime 2.5 that does not exist on that other platform.

What is taking up an extra 7.5-15.5 megs? Are you reffering to HD space or internal memory? Considering a 64 meg equipped Powermac and Pentium is significantly cheaper than the 040 Hades and also have Netscape to boot up..

The Falcon first look for an internal IDE, but since you don't have one, it will take a while before it realizes that. It will boot from the SCSI after a while, if you have installed ICD correctly. Use HDUTIL.PRG to set bootdrive and some other stuff.
There is a small program, called FASTBOOT or something like that, which puts a program on to the bootsector of a disk. This skips the check for the IDE and it will boot faster.

> #2. What kind of cheap little hard drive can I put inside the Falcon, mainly

The standard internal drive is a 2.5" IDE. It is possible to sqeeze in a 3.5" too but you'll need an adapter for the cable. (I think!)

I use only SCSI though, and with the fastboot program, and it's no problems!

```

Actually, we could go one better - get the Instant Graphics and Sound desk accessory, and I bet we can run IGS graphics over the Web. Full graphics animation with sound, hundreds of times faster transfers than QuickTime or Mpeg, and no one except Atari users can see them.

Hmmm, there's a project for next week. Start watching for http://www.3rdplanet.com/~starship/igs.htm - I think I must have dozens of old IGS files around here somewhere, and they are tiny - usually less than 5 or 6k. Thats about 2 seconds transfer time at 28800...

I disagree that something that is non-standard cannot be required. Users
decide what the requirements of a browser are. While I use lynx occasionally,
I would never pay for a browser that did not support, for example, Java.

> Browser specific features are what you're advocating when you say that
>Netscape extensions are good things.

I said "in general". I think that tables, which were not apart of the
standard when Netscape implemented them, are so powerful that it was
more important to get them out early than wait for a committee.

I'm sure that I believe this at some level. But this is exactly my point,
PC and Mac users do not have to worry about being put out. I believe that
that was Peter's original point.

q>
q> It may be obvious but it is definately a point against the Atari
q> platform.

The original point (in case anyone missed it) is that there is more software support for PCs and Macs than for Atari/TOS systems. This is mis/disinformation, actually.

There is more /commercial/ software, certainly. OTOH, most Atari users are using shareware and freeware these days by preference, and in the shareware field, Atari remains unsurpassed for both quality and range. Sure, numerically therer are more programs for the PC - but how many different videotape database programs does anyone really need?

Atari programmers are passionately devoted to making their products fast, bug-free, and "elegant" (a term that has been lost in the "fat" environment of PC and Mac systems with apparently unlimited resource appetites; it means the code is small and works in the minimum possible environment. Don't even TRY to run Win95 with Netscape 2.02/32-bit in less than 8 megs of RAM, and don't expect it to perform better than a 2-wheeled Cadillac in less than 16 megs or slower than 66MHz on a 486).

Atari systems do things in 4 megs of RAM on 15-year-old hardware that PC users had to buy new hardware for, and more than 4 times as much RAM for, last year, and Mac users are in the same boat.

If I want to connect via T-1 to the Internet backbone, I use the Pentium at work - it's hard to find a decent 100 megabit/sec Ethernet card for the Atari. But at home, I run my entire system on a 16 MHz Mega STe, and it's perfectly fine - I don't need that kind of horsepower for Web browsing at 28.8k bps, or reading news and email. The rest of the network in this household consists of 2 slightly-upgraded 1040 STs with 20 meg hard drives, and a 486DX4/120 running as a slave via Ghostlink. It makes a nice external hard disk mirror system. ;^)

Oh, and Jason runs Mac wares on one of the 1040s - with Spectre GCR. Sure, it's not the very latest Mac, but it's not $2000 either.

Interesting. I thought the ST was just as easy to install a HD as the Mac is.
Looks like this is not the case. To install a additional HD on the Mac, just
install a SCSI cable in the SCSI connector on the Mac. Set the SCSI number in
the control panel and bingo..it's so easy and anyone's gramdmother can do this.
None of this boot HDUTIL.PRG nonsense.

That sales info is a bit of an illusion. As you may or may not know,
Apple licensed its first clones almost two years ago. And PowerComputing,
the first clone maker, has had explosive growth over the past year. They
have been sucking away at Apple's market share with incredible power.
However, Apple still makes the OS (and a lot of the software) that runs on
the machines...so although their hardware market share has fallen, their
OS has not fallen as much.
I do not believe that Commodore or Atari had any company making clones.

>   1) Unit sales of Apple computers in the US market have dropped
> 21 percent, and in the world market, 16 percent - more of a drop in a
> single period than Commodore or Atari ever had. In fact, only Coleco
> comes to mind as a computer maker with a more severe sales drop.

First of all, many companies have taken 16% market share falls and survived. Esp. after changing CEOs (as Apple has just done).

Also, Commodore and Atari sucked. They were slow, ugly systems, which just didn't have any really good ideas behind them.
The Macintosh is the realization (although they have published a few huge flops in recent years) of building a computer around the people that use it. Instead of people having to change their way of doing things to use a computer, the computer is made so it works with them.
Also, Commodore and Atari were snails compared to PCs. Power Computing (www.powercc.com) now makes a 225Mhz machine with a 604e RISC chip. It is far faster than anything you can buy in the WinTel market, no matter how much money you have. What's more, this is just the first wave of 604e chips, within a few months you will be seeing 250Mhz, and I'd be shocked if there aren't 300Mhz machines on the market before the end of '96.
And before '96 is over the 620 will be shipping, a 64-bit chip, while WinTel will still be stuck in 32-bit processor land.
And within the next 12 months, in addition to Pioneer, Radius, Power Computing, Daystar Digital, Acorn, Goldstar and Ing Olivetti, industry heavyweights such as IBM, Motorola and AT&T will be announcing that they will be shipping CHRP based Power Macintosh compatible systems, and who knows who else will sign up to make CHRP boxes?

> ---
>   2) Apple's home PCs are behind the times, and customers are
> holding back from buying until better news comes around.

This is not really true, people's reluctance to buy Macs has a lot more to do with advertising than it does with the actual power of the machines.

> ---
> Seems to me that Peter will be bashing Mac users in five years, extolling
> the virtues of Windows 99.

Un-huh...

> Apple Computer - the denial ability of S&L managers, the financial
> security of junk bond funds, the technology of yesterday.

"technology of yesterday"

We can take a spiffy P5-200, with all the EDO ram and pipeline burst cache you care to put in it, it's happy EIDE drive (which over 90% of WinTel systems are shipped with...god knows why? Mac has been using SCSI for years, as all PCs should) and put it next to a put it next to a PowerComputing 225Mhz 604e and see which one looks more like the "technology of yesterday."

>FACT is, his
> precious Apple Computer is plunging down the toilet at a rate several
> times faster than Commodore and Atari.

We shall see.

 q> OpenGL standards?

It /is/ too bad - the point of "standards" is that anyone can use them. When you depart from the standard, you are creating a proprietary format. Ever heard of Graphics Interchange Format? It is a standard (a copyrighted one, but never the less, accepted world-wide as a standard). GIFs can be viewed on damn near any machine that has a monitor attached, and some that use teletype output only. If you were to decide to add your own "extensions" to the GIF 89a definitions, then there would ge exactly /one/ person who could view your new picture format - you. Even if you publish the specifications for your extensions, if everyone else doesn't immediately adopt them (or worse, if the Standards Committee, in this case, CompuServe, who holds the copyright to GIF, rejects them), no one else will find them useful - in fact, they may be downright annoying if they happen to break existing GIF viewers.

To give you another example: Right now, you can buy an IDE drive from just about any manufacturer and it's pretty much plug & play (disregarding the idiocy if crippling SCSI in the first place, which is essentially what IDE is). BUT: How would you like it if you had to buy a new interface card and load new driver software to install a new hard drive? Or how would you like it if there were no CCITT modem standards, and your Brand X modem would only connect to other Brand X modems, while Jedi's Brand B would only connect to Brand B? That's what happens when you ignore standards.

PCI /is/ a standard interface. And the newest TOS computers incorporate PCI bus slots; there is also a (fairly expensive) VME-to-PCI bus bridge for older (e.g., MSTe and TT) TOS systems.

OpenGL is a Mac proprietary format, IIRC. Lord knows I don't use it at work.

 >> Or perhaps, it is more like: It's fine if those people over there
 >> are locked out, just as long as I'm not put out.
 q>
 q> I'm sure that I believe this at some level. But this is exactly my point,
 q> PC and Mac users do not have to worry about being put out. I believe
 q> that that was Peter's original point.

PC and Mac users certainly /do/ have to worry about it. Or they should worry, if they have any thinking capacity. Netscape has one "standard," MS Internet Explorer has another, Mosaic still another (and it's different from both of the foregoing), Lynx follows HTML 2.0 standards and breaks when it encounters Netscape or MSIE-specific codes, Chameleon has problems with them also... There is a plethora of propietary "extensions" to HTML out there. Anyone who wants to be able to view /all/ of them had better devote about 200 megs of hard drive space to assorted Web browsers.

Or he could just stick to the standard and ignore proprietary crap. that's not only easier, it's faster and cheaper.

>I thought the ST was just as easy to install a HD as the Mac is.
>Looks like this is not the case.  To install a additional HD on the Mac, just
>install a SCSI cable in the SCSI connector on the Mac.  Set the SCSI number in
>the control panel and bingo..it's so easy and anyone's gramdmother can do this.
>None of this boot HDUTIL.PRG nonsense.

Exactly the same thing on my ST and any other ST pete, if you looked
carefully at the posting it was actually a *FALCON* that the person was
talking about and it was not an additional HD but removal of the
normal IDE drive and using an External SCSI as the main drive. I don't
know to much about this side of the Mac and I expect it would cope
better but if you look at an equivalent situation with the internall
SCSI of a Mac being removed and attempting to boot from an external IDE
drive (with adapter of course) I would genuinely be interested to know
how it would cope.

>7200/75 is $999 which includes 4x CD, ethernet, 500 meg HD. How much for an
>equivelant Falcon would cost?

You are forgetting that an 8 meg PowerMac is inoperable - another 300 US$ for RAM. Plus MagiCMac and NVDI/Mac - woops - another 300 US$ gone. Plus a Centronics cable - woops - 100 US$ gone, plus a monitor adaptor - woops - 50 US$, plus a Mac enhanced keyobard - woops - 200 US$ (note that Macs generally ship w/o keyboard, exception: the Performa line), plus a sensibly sized HD - 300 US$.

And if you somewhen need to change the internal clock battery - they'll
ask 400 US$ for that.

The merger between Atari and JTS is complete. ATC is now listed under JTS and I believe it's on the New York Stock Exchange. For now, Atari is simply a division of JTS.

Um...what happened to those beloved FACTS of yours? What a fact filled rebuttal!

How about some more facts...

Like the fact that 80% of all computers used for color publishing jobs in the advertising, graphic design, printing, publishing and pre-press industries are Macintosh, according to a 1996 study by Griffin Dix Research Associates. At medium to large sites with more than five employees, the share of Macs installed jumps to over 85%.

Or

That GIGA Information states that Apple is the worldwide market leader in digital camera sales. The Apple QuickTake share is greater than that of all other digital camera manufacturers combined.

Or

Maybe that Apple has been named the number one vendor in customer satisfaction for the sixth time by Linea Edp, the major Italian MIS magazine.

Or

That Apple is the most used personal computer brand overall in Australia, per IDC, and is the number one brand in Australian small business, education, and consumer markets. And that Apple is the number one U.S. computer vendor and the number three vendor overall in Japan with 14% to 15% share per IDC and Dataquest.

Or

That Apple continues to lead the way in technological innovation. According to the 1/29/96 issue of Information Week, Apple Computer was awarded 53 U.S. software patents in 1995, more than any other vendor.

Or

Perhaps that the February 1996 issue of PC World magazine rated the Mac OS the best 32-bit operating system, over Windows 95, Windows NT, and IBM OS/2 Warp.

Or

That Mac OS was the clear winner in the Software Publishers Association's first "Ultimate Mac vs.Windows Challenge," in which users of each platform were asked to perform eight real world tests. The Mac user, a ten year old boy, finished his tasks significantly faster on average than his adult Windows counterpart (who I might add had another adult helping him!).

Or

That Apple Power Macintosh 7500 and 8500 received BYTE Magazine's 1995 Editors' Choice Awards of Excellence, which honor hardware or software products whose technical innovations set new standards for products in particular classes.

Or

That InfoWorld named Apple's OpenDoc the winner of the 1995 Landmark Technology Award, given to the most significant original idea or advance in a current technology each year.

Or

That Power Macintosh 8500 was named "Best Desktop System" in 1995 by Ziff Davis's United Kingdom PC Magazine.

I could go on...I could go on for a long, long, long time..but this is getting incredibly long as it is. Just because Bill Gates spent half a billion $ telling everyone that Win95 is the best things since DOS<sic> the fact remains that Win95 is like Mac85...BYTE said it best when they said:
"To see tomorrow's PC, look at today's Macintosh."

> >We can take a spiffy P5-200, with all the EDO ram and pipeline burst cache

>
> Why not take a P6-200 with an UltraSCSI-Wide hard drive (something more
> appropriatem given the price range of your crappy 604e) and see which one >is

> behind then?...

Um...okay.
The 604e (which PowerComputing sells with UltraSCSI-Wide RAID arrays) will
still crush the either the PentPro or the Cyrix 6x86...esp. if either of
them is running Win95...give the PentPro WinNT...and it'll be closer...but
not much.
And once the 620 and Copland come out it's just going to be sad. The
performance gap is growing, it has been ever since Mac started using
RISC... and it's only going to get bigger until at least '98 when Intel
starts making RISC chips.

Look, I was born and raised on PC. I don't have anything against them,
they have their uses...I guess...I just got fed up with spending days to
install hard drives...fighting for hours to play games with my 16MB of RAM
when the problem was that there wasn't enough under 640K!
I'm a consultant and I spend all day with both systems...and there's no
question who gets their work done faster and who needs more help from me.
I hope that Windows does stay powerful for a long time...it will keep my
pockets full! But on my desk, you will always find the MacOS.

Be well

You are making references in past tense here...so I feel that I have no recourse but to reply...you obviously don't know your history... The Commodore Amiga and Atari ST both had many ground-breaking (oh yes!) innovations when first introduced. The Amiga had the worlds first true pre-emptive (not co-operative like Mac!) as well as the worlds first first true 32-bit OS...Atari's had built in MIDI ports, DMA, fast GUI, etc, etc,...both were leagues ahead of current offerings from other manufacturers of the day.

>The Macintosh is the realization (although they have published a few huge

Okay, this is subjective and just my opinion; but I do not find Macs to be more intuitive than my Falcon 030...I'm sorry but dragging the floppy icon to the trash icon to eject the disk is not something that strikes me as being "obvious"... :)

>Also, Commodore and Atari were snails compared to PCs. Power Computing

Again, you are using past tense here and if so, then you are dead wrong, as the Amiga and ST blew smoke rings around PC cpu's of that time....

>And within the next 12 months, in addition to Pioneer, Radius, Power
>Computing, Daystar Digital, Acorn, Goldstar and Ing Olivetti, industry

Don't forget the Amiga! They are currently working on a new generation of machines that will have the Amiga's tight, effecient, multitasking, OS running on PPC's...Atari's TOS is already running on 68060's; I hope to see TOS on the PPC, someday as well... Scary, isn't it? <grin>

As usual, you didn't quite "get" the message Mr. Sinclair...he was not installing an additional drive at first, he was using an external drive instead of the Falcons built-in internal IDE interface. JFYI, it is "SO" easy to install a hard drive on an Atari...Yep, just cope baby... BTW, you don't "boot" with HDUTIL.PRG...its used to configure and adjust the parameters....please re-read the message carefully, its all there.. ! :)

>they may be downright annoying if they happen to break existing GIF viewers.

So you are saying that a standard is made when a large group of developers deside to support a particular standard? Well, 90+% of browser developers support netscape extensions, so I guess that they are standard.

>PCI /is/ a standard interface. And the newest TOS computers incorporate PCI
>bus slots; there is also a (fairly expensive) VME-to-PCI bus bridge for older
>(e.g., MSTe and TT) TOS systems.

PCI is a bus architecture designed by Intel. It has widespread support but
it was created by Intel and is, largely, controlled by Intel. Just like
netscape extensions. What is the difference.

>OpenGL is a Mac proprietary format, IIRC. Lord knows I don't use it at work.

No. OpenGL is the graphics system used first by SGI and now by some PC
systems. Macs do not support OpenGL.

Please look at this posting as 'beginning good but getting a bit too
carried away at the end'. RAAAAAAGE!

Brian Quinlan (quinlan@sfu.ca) wrote:
: Sure, the Web will probably contain mainly text until the end of time
: but that doesn't mean that other formats won't enhave it.

Actually, the web will always mostly contain 'information' of all kinds.
The purpose of a web browser is to retrieve files from the Internet
without the user having to worry about protocol specific stuff. The
purpose of HTML is to have a uniform hypertext standard as well as giving
a way of organizing the contents of the document. What is happening right
now is that Netscape and Micro$oft are inserting a lot of non-standard
tags to make things 'look better' and introducing close to WYSIWYG for

HTML. I seem to recall that the original tags were made up in such a way that you were supposed to go 'Header level 1, I wish to look like this on my browser' - and you could get documents to look whatever they wanted to - on YOUR browser. Others would have their own configurations.

The problem that we now see on the web - whether you have noticed it or not - is that a lot of people are spending too much time on what things look like and forget about document context.

"Aren't you using Netscape? Get it NOW!" they say. Well, excuse me! My Internet connection is a terminal emulation through the Toronto Freenet. I'm using Lynx for crying out loud. And I _really_ wanted to know a little bit about Nashville, but the entire page is just [IMAGE] [IMAGE] [IMAGE] [IMAGE] [IMAGE]. I click on a random [IMAGE] and the next page looks just like the first one. Well, fine, if you don't want me to visit your home page, I won't. If you don't want my business, you won't have it. Goodbye.

It is amazing how web page authors want everyone to read their pages but forget that not everyone is using Netscape. So what was it you wanted me to get out of your page? Information or just some fancy text rendered with some nice art package? Try SELLING this... the worst thing is that that is exactly what they are doing...

"Well, sir, it looks damn great! How many will see this?"

"Oh, there are millions and millions of people on the internet..."

"Goodie! That's what I liked to hear! Thanks. Bye!" (customer leaves)

"...but only those using this specific non-standard browser will actually be able to see this the way it's supposed to be..."

There even was a site I visited that had a lot of [IMAGE]s, and on the bottom it said "Mail us!" - now, of course, I couldn't actually find their email address... I suppose it was in one of those [IMAGE]s...

Did you know that the Toronto Freenet alone has 30k users with text-only access to the Internet?

>None of this boot HDUTIL.PRG nonsense.

To install an HD on the Falcon:

SCSI:
1) Plug in drive.
2) If pre-formatted, boot and go.
3) If requires format, format using AHDI, then boot and go.

IDE:
1) Same story.

IDE on most Macs:
1) Um, there isn't any, it cannot be used.

If one sticks to AHDI, the process is easy. Moving to ICD can complicate things, but we in the TOS market have a _CHOICE_, unlike most Mac users. It's proprietary or bust for them.

 q> standard.
```

Excuse me? Netscape and CAB are the only two browsers that support all of the Netscape extensions (less frames) to HTML 2.0; MicroSoft has their own different and incompatible extensions, and Mosaic, Chameleon, Lynx, et al, stick to the actual HTML 2.0 standard.

```
 >> PCI /is/ a standard interface.  And the newest TOS computers incorporate

 q> like netscape extensions. What is the difference.
```

The difference is that Intel ran the standard through a committee process to make sure that it wouldn't cause mopre problems than it solved. Intel also manufactures more than half of the PC motherboards going into PCs today (the number may be larger, but I could legitimately testify to "more than half" under oath).

Netscape, OTOH, doesn't ask anyone else befoer they add more Netscape-specific extensions to HTML, and doesn't supply "OEM browsers" to other browser publishers.

```
 >> OpenGL is a Mac proprietary format, IIRC.  Lord knows I don't use it at

 q>
 q> No. OpenGL is the graphics system used first by SGI and now by some PC
 q> systems. Macs do not support OpenGL.
```

Ah. Well, then, it can't be an industry-wide standard, can it? It may /become/ one eventually - but by accretion, rather than a standards committee endorsement.   Right now, it's a proprietary format, like Adobe's PDF.

```

...thus locking out anyone that doesn't support the PROPRIETARY Netscape web document format. This nullifies the most useful feature of the internet in general. System independence goes straight to hell and one is left with 2 major alternatives. Implement the standard

correctly and get pooch screwed by any webmaster that thinks 'scape hacks
are the entire universe or attempt to emulate the monster yourself.

Thus, instead of Unix/Linux, one ends up with
PC-Ditto, Wine & WABI...

Furthermore %90 of webmasters don't implement most of the 'scape
non-proprietary standards (<center> excluded) and those that do
do it so poorly as to make it less than useless.

Well, let's grab your machine, yank out it's internal SCSI drive and then
try to install an external IDE drive. Then we'll all watch how easily
your beloved mac boots up with this configuration.

>install a SCSI cable in the SCSI connector on the Mac. Set the SCSI number in
>the control panel and bingo..it's so easy and anyone's gramdmother can do this.
>None of this boot HDUTIL.PRG nonsense.

With the drive type for which it was designed, the Falcon would be
even easier than this. The user would just plug it in.

BTW- last time I checked Dirt Cheap Drives was selling 2.5 IDE's
213Meg for $80.

>Original Lemmings? Didn't Atari rely on Lemmings to continue the agony?
>Interesting.

I could do in 1987, what it would take PC's 6 more years to accomplish
at a price I was willing to spend. I had a machine that was before
it's time relative to PC's and spent a lot less for it.

This is not the profile of a lemming.

The profile of a lemming is a person who would flock to buy even then
obsolete clones just for the moniker of 'PC-compatible' when then
cheaper machines were capable of running any software those machines
would run that they might need.

Mac's (actually apples of any kind) were too absurdly priced to be
a viable option.

The price of a Mac still can't beat a well configured clone.

Tex will be stomped out by the likes of WordPerfect.

This may be the case but, it has not historically been the nature of the net.

If webmasters decide to become sheep within the Mac and PC flocks, then they'll destroy the greatest promise of the net.

All those VAXen that have been on the net since before clones existed will get shut out. Petty Elitists will turn the net into yet another enviroment where lack of excess wealth will be a barrier.

Not even all Mac and PC users will be able to access the fruits of your philosophy. Those with the older 'ordained' machines will be as locked out as any VAX or Amiga.

What makes this even more ironic is the fact that I have even heard complaints about the nature of PC/Mac upgrade costs from the sorts of people that already have more money than you'll ever see in your lifetime.

Frills should remain such.

...and my point stands. You don't care if you lock everyone else out.

In the current political climate, it would be considered anti-
enviromental actually. The statement was posed within a certain
context. What do you have today that put that old machine on
the scrapheap in the landfill? Where have you moved forward?
Or do you just have a few more frills and a lot of stuff you never
use...

>suppose ST advocates think the world should sit still and end progress. No
>sir, I won't give up Quicktime 2.5 that does not exist on that other platform.

You don't use %90 of the functionality of quicktime. You probably don't
know what %90 of that functionality is. What you do use is probably
covered by the functionality of CyberStudio: available years ago for the
ST and usable in 512K of RAM.

>
>What is taking up an extra 7.5-15.5 megs? Are you reffering to HD space or
>internal memory? Considering a 64 meg equipped Powermac and Pentium is
>significantly cheaper than the 040 Hades and also have Netscape to boot up..

This might be germane if not for the fact that nearly no atari user
needs that kind of power. Our OS takes all of ~150K. We don't need
to spend money on Medusas or even Falcons.

The sort of people that use those would be the sort that would need
MUCH more expensive macs.

Once again, you are substituting a few marketing numbers for what
the machine can actually do for you...

...and the best you can come up with is a video display format.

I'd still love a copy of Klingon Kalamity and a .seq -> .avi converter
or the specs to do so.

BTW, the effective thruput of apple's own version of QT (2.03) is actually
kinda crappy. Considering that M$ actually swipped QT code for MSVid, it's
hard to imagine why it actually works better (faster).

The PC/Mac crowd has created a state wherein where everyone seems
to think that in order to even drive one must have a Lexus and that
an escort or even crown victoria would not do.

At least PC users have a civilized path in this regard with better
incremental upgrades. Mac users are just plain screwed.

4x? on a Mac/PC? This is already obsolete. With the exception of
CD changers, 4x is just plain getting rare.

500? Most new PC's are shipping with 1.6 GIG and many are shipping
at 2 (most notably, Mac's direct competition: Aptiva).

>>equivelant Falcon would cost?

Provide your own disk (80bux) and RAM (100bux) and you would have a
Falcon that would be able to do more that your crippled powermac.

Also, how is the state of ATA CDROM support. You can get the bare
OEM vibra 8x CDROM from Best Buy for 120bux.

How much CDROM will 120bux on a mac buy you?

Once you get past the motherboard, costs are quite similar actually.
Although the Falcon supports more, cheaper alternatives.

>
>You are forgetting that an 8 meg PowerMac is inoperable - another 300 US$

Now, honestly, unless you are stupid enough to buy your ram from Apple,
more RAM will only cost you 100bux. 300bux will get you 48M these days
if you know where to shop.

Run a real OS on a PC, and SCSI will be twice as fast as EIDE
even on a clone.

100bux gets you SCSI as good as any typical Mac (or clone).

Digital Research implemented within the same space one needs
for DOS a GUI with a fully device independent API.

An ST running bitmaped text is faster than clone running dos
using text mode and a CPU that is twice faster and generation
advanced than the one in the ST. (more a tribute to motorola tho)

An ST runs software emulation of the below mentioned clone at
1/2. Given the nature of emulation overhead, this made it at
least 5 times faster than the more expensive machine below.

An ST was 1/3 the price of the cheapest contemporary clone not
even as powerful as the machine above.

There were no facts to rebutt.

For a knee jerk reaction its not bad really. It has a small resource
footprint and most of the necessities for a GUI. Admittedly it
doesn't have a lot of the frills or the bulk. Actually, I'd say it's
more of a poor man's X for DOS and CP/M.

It's similarities to System/Finder are primarily superficial.

>
>>
>> More speed *IS* a waste if it doesn't do more, which was my very point.

>way and frankly this what Atari did.

      So, is WordPerfect 1 Meg or 2?

      Is MacOS 700K or 500K?

      What's the smallest usable system configuration: 1024K or 512K?

>
>>>I agree that the ST is fine for email just don't try using Netscape.
>>
>> Netwho? Is that like CAB?
>
>NetScape is many time more than cab.

    CAB is meant to be an HTML 2.0 browser, not your one and only
    one program for accessing every part of the net (including
    text only streams).

    Netscape, is also vastly larger.

    The standard downloadable these days is 6M.

>Thats funny, i don't remember paying a penny for Netscape.

As a student, that's correct - you are entitled to unlimited use without payment. However, if you need technical support from Netscape, you have two options: (A) Pay for a fully-registered commercial release of Netscaep, which costs US$49 as of this very minute, or (B) pay the unregistered user tech support fee, which amounts to about $120/hour. I used to work there, I know what it costs. <G>

And, when you graduate or flunk out, you are in violation of US Copyright law if you continue to use Netscape without paying for it. Chances are no one will prosecute - but the fact is that, if you use Netscape beyond the permissible evaluation period, you are a thief and a criminal.

Have a nice day.

Actually, I have a comment to make about this: DVI files are actually processed TeX files (.tex), and they're not plain ASCII for a reason. They are meant to be typeset documents. ASCII is a very poor language for typesetting; TeX is one way around this. It's an extremely powerful typesetting language, and there's no possible way that anything even remotely similar could be done in ASCII.

: > Have you heard of Linux? Linux has kernel support for Java binaries,
: >and compiles on many 68k machines, _including_ STs. Shockwave, AFAIK, is
: >barely supported at all, even in PCs and Macs.

: Actually, Shockware runs very nicely.

...but only when it's supported. It's not a part of standard HTML, so it's not neccessary to support it. It can even be detrimental to support it --- it encourages users of that browser to use Shockwave and ignore users who have other browsers and who don't have access to Shockwave.

: > That's a problem with ignoring standards; you never know what to
: >support. How many is "many"? How many users must want something for it
: >to be supported? How many other vendors must support something for it to
: >be supported by another vendor? The use of standards eliminates that
: >problem.

: Great. But I could make the same argument about a word processor. How
: many users need to want multiple undo before I support it? Do it
: need to support it to be competitive. Well I guess that I'll
: wait until it's a standard.

  That's different. HTML is a standard for the presentation of text.
You specify headers of different levels (<H[1-6]>), the emphasis of the
words (<EM>,<STRONG>,<I>,<BLINK>,<B>), the format of the text (<P>,<BR>),
and various other things (<A>,<IMG>,<HR>, etc.). (You know, I think I
really screwed up people who are using Netscape to read news) A word
processor is a method of entering text. You can have several word
processors, all of which work with a certain format (HTML is one of
those). The analogy is a poor one.

: > IMHO, the web is intended as a medium to transport text. There's lots
: >of tags to make the presentation better or easier, but the main purpose
: >is to transport text. Yes, forms and text entry fields can be useful,
: >but they should be used only when appropriately (as in search engines).

: Sure, the Web will probably contain mainly text until the end of time
: but that doesn't mean that other formats won't enhave it.

  Proprietary exten$ions which degrade pages for those not using
particular browsers do more to hurt the Web then help it.

: > The same could be done with a short C program, and it would probably
: >work better, too. Java certainly has uses, but it's nothing close to
: >what the marketroids are making it out to be.

: The nice thing about Java applets is that they are very portable and
: are fairly secure.

  C is very portable and more powerful. The security of Java also
depends greatly on what you let it do --- I've heard that you can write a
Java program to wipe your hard drive (don't ask me, I've just heard
this). When run in the proper environment, C is much more secure (i.e.,
under a Unix clone).

: So you are saying that a standard is made when a large group of developers
: deside to support a particular standard?

Nope. Standards are created by an official body of people who write a governing document which sets forth the rules which define the standard. POSIX is a standard. HTML is a standard. GIF is a standard. DVI is a standard. Netscape exten$ions are *not* standard because Netscape is not the official body which defines HTML.

: Well, 90+% of browser developers
: support netscape extensions, so I guess that they are standard.

We discussed this before. You're wrong.

: >PCI /is/ a standard interface. And the newest TOS computers incorporate PCI
: >bus slots; there is also a (fairly expensive) VME-to-PCI bus bridge for older
: >(e.g., MSTe and TT) TOS systems.

: PCI is a bus architecture designed by Intel. It has widespread support but
: it was created by Intel and is, largely, controlled by Intel. Just like
: netscape extensions. What is the difference.

PCI is _officially_ controlled by Intel. Netscape is not the official body which creates the HTML standard.

This is very true. I've heard stories of Amigas formating six floppy
disks at once...and I have to admit that an Uncle of mine had an Amiga
many years ago and he could do things on it that My father's PC couldn't
come close to...I totally forgot that Amiga was under Commodore...As for
Atari...well...I never saw one I liked.

Things that can a)be fixed with extentions right now, and b)will be fixed
in MacOS 8.0.
Of course...I have to say that I'e never even seen a Falcon 030 in my
life. They may be very good boxes (so are NeXT and the BeBox...) but
there's just not enough software for them...at least I would have no idea
where to start looking for it.

I hope it does make a come back. I'd love to see them alive again on the
CHRP platform. I'm in very strong support of any good GUI and any system
that's main focus is on a high quality interface. Macintosh is just the
only one I've found that people actually recognise...

Do you know any place around Columbus, Ohio that I could see Atari's TOS?
I'd really like to. How much are they going to cost?

I'm sorry to insult your beloved platforms without enough knowledge. I
just have such strong memories of my Friend's Commodore 128...it was not
so hot. And finding good software for it seemed like a real challenge.

: That's like selling a development tool without a debugger. They are certainly

: useful but since they are not neccessary, "they need not be implemented
: if the author doesn't feel like it."

That analogy isn't very useful. A debugger is considered to be almost standard; it's not required, but you're certainly missing something without it. Java and Shockwave are extensions; they are possibly useful, but they are certainly not required.

: > That doesn't mean that they're not useful.

: A viewer for something that I will never need to view is not useful.

...but only for you and others in your situation. If you decide that you will never need a certain file format, that does not mean that that file format should go completely unsupported.

: They are useful if you want to view most of the content of the WWW.

"most"? I have not encountered very many pages which make use of frames (unfortunately, the authors of most of those don't realize that there is a world without frames --- another problem with non-standard HTML) and I don't recall ever seeing a page which use tables.

Not really. If developers didn't actually try to implement things then developments would be put in comittee limbo instead of being useful to end users.

> That analogy isn't very useful. A debugger is considered to be almost

My "most" I mean that with a web browser that supports HTML 2.0 + Java + Shockware + Netscape Extensions then virtually all pages will be viewable. For an example of tables, go no further than my Universities home page:

> ---

he he he. You did not read the report entirely. They stated that Apple's sales decline has bottomed out and new products may accelerate sales once again. Also noted that the press fud and the recall of the Powerbooks impacted sales. Once the powerbooks are stocked in the channels willl increase sales.

> 2) Apple's home PCs are behind the times, and customers are holding back from buying until better news comes around.

I would. I was never a fan of the Performa line. I thought they were crippled technically. However, the prices my reseller has them for is a steal. The 6400 should change things along with the new clones.

Shockwave and Java, while really nice "bells and whistles," are /not/ an
industry standard.  And there is no "fully HTML 3.0 compliant" browser,
because there is no HTML 3.0 /standard/ as of yet; the standard hasn't
been approved.

And your argument wasn't? We have a difference of opinion here - and opinion is not fact, is it?

>Technology progresses. Everyone takes the chance that new technology
>won't be supported on their old hardware. But Peter is correct in
>saying that Mac and PC users can expect better support, as far as
>Net technologies, than Atari users.

If you say anything that happens to occur to you, sooner or later one is bound to be correct. Peter has spouted literally reams of mis- and disinformation in this (and other even less appropriate) forums. His opinions are founded on /advertising,/ which is the exact opposite of /facts./

It is a fact that there are far more developers for the PC than any other paltform. They all expect mountains of money for their most mediocre efforts, and historically, they have reason - PC users will apparently pay for /anything/ (witness the continued success of one of the poorest operating systems/user interfaces on the planet - need I name it?).

Macs have a far smaller developer pool, but their apps are also usually priced up ther with the "Cadillacs" of software, because the Mac has historically been a high-priced machine in comparison to similarly-capable platforms; thus, the market tends to expect to pay more. There are some notable exceptions to this in the Mac shareware/freeware area. One of them is Free PPP, and it's actually better than the "official" PPP layer from Apple Corp.

Atari has the smallest developer pool of the three platforms. However, the developers are. as a rule, fanatically devoted to making their applications run in the smallest possible resource pool, and they pump out bug fixes and updates far faster than Micro$loth pumps out bugs. Finally, the cost of equivalent applications is usually far less for the Atari/TOS platforms than for the Mac or PC.

>>What's useful depends on the requirements of the user, not on the
>>Marketing pinheads in Redmond or Cupertino.
..
>
>Thats great for you but a lot of people like Java applets, Shockwave and
>Realaudio. And any computer can do PPC data transfers and text
>conversions. Macs and PCs also have good web tools along with the Atari.

What people like and what they need are usually completely disparate. I

/like/ Rocky Road ice cream. I definitely don't need it. And, like ice cream, an excess of "things I like" makes for "fat" Web pages which take forever to view even with a 28.8k modem and take up enormous amounts of storage space. I'm not saying no one should use Shockwave or Java - I'm saying that /judicious/ use can /enhance/ a good page. Indiscriminate use can make a mediocre page absolutely unbearable.

Finally, let me note that I never said that Macs and PCs can't do PPP (or, in your words. "PPC") data transfers, or text conversions. I simply see no reason to devote a $3000 computer to doing what can be done on a $500 computer. It's called "appropriate technology." Don't carve the pot roast with a chainsaw, eh?

CAB Supports tables, and they are used extensively at my site to help ensure the data is presented in an organized fashion. However, I have been having problems the past week accessing my site via a dial-up connection. It's no problem from the T1 line here at work, though; perhaps you can get in and take a look.

Of course he is. But he didn't get that fact from research or experience
(it's a wonder he managed to get a fact at all, if history is any basis
for judgement); he is simply spouting MacGospel. There's nothing wrong
with Macs as a whole (if I could have either a Mac PPC or a Pentium under
MS-anything, the P5 would lose hands-down simply because I hate
MicroSlop), but that doesn't mean they are always the best or only
solution for a given purpose. They make lousy network servers, for
example, because MacSystem is even slower than Novell for most file
access. OTOH, for DTP I would rather have a Mac than a PC. And, for my
own software, I want a TOS-based system because (a) it's inexpensive (paid
for already, in my case) and (b) more than adequate for the job I want to
do.

>I would probably use a XT if all I need to do was text conversions

>and PPP. But I also want to view Java applets and director files.

I think I'd be pretty unhappy with an XT for anything but formatting disks and running McAfee - which is all I use the one here at work to do. Both are slow tasks by the nature of the medium. When it comes to mutlitasking, my MSTe at 16 MHz outperforms the 20 MHz XT by several orders of magnitude. I suppose if I wanted to spend money on DesqView, that might change, but since all my Atari/TOS Apps are paid for, using an X86 system would be a new, major investment. Again, appropriate technology. My 28.8k modem is the bottleneck, so putting a DEC Alpha on line would not significantly speed up what the MSTe does; an XT would slow it down.

"Standard" is, in this case, a list of specifications approved by the standards committee. Since the committee has not yet released an approved list of specifications, there is no standard. Q.E.D.

Please see my message entitled "Apple's Poor Price/Performance Ratio." This
details how shipments of Macs declined over 16 percent worldwide, and over
_21%_ in the US. If that's not collapsing sales, than you're a conservative

Republican.

>a real computer? A real computer is that you can take it out of the box, plug
>in the monitor, chord and turn it on and get productive? Or is a real computer

I can't think of any computer where that essentially isn't the case now.
Most machines are plug-in-able. It's when upgrades come along that things
get hairy on the PC.

How interesting. Rich just created a "standard" with as much legitimacy
as Netscape extensions, yet you scoff. I'm sure you'd be quite upset
if you ran across a page running STG graphics and propritary CAB frames (if
such a beast existed).

>>That computer cost me $60. We spent $1500 on /upgrades alone/ on the 486 last

>Net technologies, than Atari users.

Wow, you win the award of excellence for stating the obvious. Peter is correct - but he also is insisting that people pay more. You get more support, but you pay more in software, frustration, and hardware. A starter Mac from ComputerTown is $2000. Starter Falcons cost much less. And the software for Internet access is free.

>Thats great for you but a lot of people like Java applets, Shockwave and
>Realaudio. And any computer can do PPC data transfers and text conversions.
>Macs and PCs also have good web tools along with the Atari.

Which is also wonderful - but over 30% of Web users cannot view _ANY_ of these formats. Why should lynx, Amiga, TOS, and other users be forced to surrender the ability to view HYPERTEXT info because of the lack of Java tools that make eyes on a picture blink?

Sorry for not paying attention but I'm fairly sure that you are wrong. I think that any 486 or better (and that's not really "contemporary" in my mind) can use Java or Shockwave. I don't think that the Atari can.

> As long as GNU exists, any REAL standard should be viably supportable
> on the ST (or any other machine for that matter).
> Java shouldn't be much different than the Hisoft C interpreter...

It seems that I've lost the standard battle so I'll try a new approach... even if something is not a standard, if many other vendors support it and users want it, then it is worth supporting.

> ...and even more people, PC using people AND Mac using people think they
> are, for the most part, useless, bandwidth wasting, toys.

The WWW is mostly a waste of bandwidth but still we use it because there are definately some useful things on it. There is a really cool Java applet (it's fairly small I think) that let's you interactively play with JPEG conpression settings. It's pretty handy if you want to hand tune the compression matrix.

> The only thing that Java has ever done for me is make my status bar
> useless. The rest I don't have the patience to deal with over the
> current network.

Java applets tend to be fairly small. It's the graphics that they need that tend to be large. But those applets are usually useless anyways.

>
>That's like selling a development tool without a debugger. They are certainly
>useful but since they are not neccessary, "they need not be implemented
>if the author doesn't feel like it."

No, development is not done under WWW browsers - viewing is.  While it's
good to support every standard out there, ancouragement of a hodge-podge
of standards can create situations in which _NO_ browser can view all info
freely available.  That's not accessibility - that's stupid.
---
For example, if I put up a page that used only STG bitmaps and CVG vector
images, I would be blasted for a "non-standard page."  Great, and correct.
But complain about a "standard page" that requires a certain brand browser
"to view it correctly", and you're booed.  In the WWW, "Netscape NOW" and
"MS Explorer" download options shouldn't be the rule.  These things
are platform-specific and proprietary - both ideas that the Internet
is supposedly supposed to counter.

Is the original poster trying to say that Peter's obnoxious comments
are hurting the Mac because Atari users will associate the Mac with
him? Or is the original poster trying to say that the same points
that make the Atari uncompetitive also make the Mac uncompetitive. Or
is the original poster trying to say that the points, given my Peter,
do not apply to the Atari but do apply to the Mac. Please donate a
clue.

You aren't paying attention. A fairly contemporary clone is being left behind as much as any ST.

As long as GNU exists, any REAL standard should be viably supportable on the ST (or any other machine for that matter).

Java shouldn't be much different than the Hisoft C interpreter...

Considering that the maximum data thruput on an analog modem is 4 Kilobytes per second and even a lowly XT should be able to manage CPU-RAM thruput of 4Megs/second, even a lowly XT should be able to handle the task if programmed properly.

Cases in point: GEM/86 & QNX

Otherwise the tasks are beyond the capabilities of a conventional modem and are therefore red herrings.

Depends on the medium. CCIT sets standards for telecommunications, EISA and
ANSI For lots of 'lectronic thingies, UUnet for Usenet... Internic is the
repository of standards documents for the Internet, though, so if they don't
have such a doc, it's not an Internet standard.

: Not really. If developers didn't actually try to implement things then
: developments would be put in comittee limbo instead of being useful to
: end users.

"limbo"? Standards committies don't just sit around. They work to
create a useful and useable standard. By bypassing that process, we are
subject a flood of useless, unstable, unusable, and incompatible
"extensions". Once these things become standards, we _know_ that they
are useful, tested, and universal.

: > That analogy isn't very useful. A debugger is considered to be almost
: >standard; it's not required, but you're certainly missing something
: >without it. Java and Shockwave are extensions; they are possibly useful,
: >but they are certainly not required.

: Frames and tables are "almost standard".

What is "almost"? Say 99.0% of browsers support the <foo> tag. Is it
standard? If it is, is it still standard at 98.999...% of browsers? At
98.0%? 97%? 95%? 90%? 75%? 50%? 0%?

: Netscape and Internet Explorer support them and that's 90+% of browsers.

Translated: "What's popular supports them, so it must be good." I
don't quite think so.

: > "most"? I have not encountered very many pages which make use of

: >frames (unfortunately, the authors of most of those don't realize that
: >there is a world without frames --- another problem with non-standard
: >HTML) and I don't recall ever seeing a page which use tables.

: My "most" I mean that with a web browser that supports HTML 2.0 + Java +
: Shockware + Netscape Extensions
^^^^^^^^^^^^^^^^^^^
I hear the sound of an argument failing.

: For an example of tables, go no further than my Universities home page:
: www.sfu.ca

Actually, I have to take that comment about never having seen frames back. I'm forced to use Lynx, and Lynx handles frames by stringing everything together (AFAICT, it ignores the tags because they're non-standard). I had never had a page which made it clear that they were using a table, presumably because the authors assumed that you'd be able to recognize it. Unfortunately, under lynx, you can't because it's non-standard.

So, I've got this nice Falcon, fully loaded with RAM...but NO internal hard drive. I've hooked up a 640 Meg SCSI drive and bought the ICD software that is supposed to make it work. It does install all the files on the drive.

But when I boot the Falcon, it does not "seek" out the external hard drive, so it doesn't boot! I devised a work-around, where I book from a diskette, but that has another problem. When I install software, the software modifies the system files on the HARD DRIVE, not the diskette. Therefore, it does not run properly when the computer is booted, as those system files are never used.

#1. How can I get the Falcon to seek the SCSI drive upon power up?

#2. What kind of cheap little hard drive can I put inside the Falcon, mainly to hold the system files. I'll used the external SCSI for everything else.

I'd like to report more on Atari, but I'm stumped.

Thanks for your help!

>And the software for Internet access is free.

It may be obvious but it is definately a point against the Atari platform.
Whether or not this is out wayed by other considerations, such as the
ones that you listed above (which I don't agree with, but that's not
important), is up to the user to decide.

>Which is also wonderful - but over 30% of Web users cannot view _ANY_ of

>tools that make eyes on a picture blink?

I bet that the number is under 30% and Java applets can actually be
useful.

Pay more for what? Mac and PowerMac hardware hardware in general is cheaper
than the 16 mhz 030 Falcon...
7200/75 is $999 which includes 4x CD, ethernet, 500 meg HD. How much for an
equivelant Falcon would cost?

As for software being more is rubbish! Thats funny, i don't remember paying a
penny for Netscape.

What are you babbling about? I am not slagging off the ST and it's percieved quality. I counter the arrogance displayed by ST users who live in fanatsy land and think that the rest of the world has been brainwashed for not selecting an Atari computer. And I do the same for arrogant Mac users as well.

> I hope that you were not implying that it takes more time to master an
> Atari than a Mac, if so then you are more ignorant than I had ever
> possibly imagined.

Actually I was implying to the wintel world. However, the Mac is alot more versatle than the ST due to guidelines in software development and how Mac software can work with another for seamless integration. Not very well done on the ST platform

Yes, Apple's sales did drop but in no way sales collapsed. Apple's sales declined due to the recall of the Powerbook and Apple's inability to supply the channel. The channel had 75,000 less Powerbooks and won't be fully restocked until the end of August. Yes, Apple did screw up on the PowwerBook and is taking more time than expected to rectify it. I fail to see the connection with Atari and the Tramiel family.

>   2) Apple's home PCs are behind the times, and customers are

You mean the Performas...I agree, I would not buy any that had a 75 mhz 603 in it for that kind of money. However, my campus has a variation of a 6200 called the 6214 which is nicely priced as a package. However the new Performa 6400 which are available at CompUSA despite not officially announced until Monday is nice. If I were to buy a desktop system today, would be the new Powerbase line from PowerComputing. Starting at $1500 for a 180 mhz 603e on a daughter card which includes 8x CD, 16 megs HD, 1.2 GIG, 2MB video, 3 PCI slots and software bundle is a killer...

: JEDI writes:

: >You aren't paying attention. A fairly contemporary clone is being
: >left behind as much as any ST.

: Sorry for not paying attention but I'm fairly sure that you are wrong.
: I think that any 486 or better (and that's not really "contemporary" in
: my mind) can use Java or Shockwave. I don't think that the Atari can.

Have you heard of Linux? Linux has kernel support for Java binaries,
and compiles on many 68k machines, _including_ STs. Shockwave, AFAIK, is
barely supported at all, even in PCs and Macs.

: >   As long as GNU exists, any REAL standard should be viably supportable
: >   on the ST (or any other machine for that matter).
: >   Java shouldn't be much different than the Hisoft C interpreter...

: It seems that I've lost the standard battle so I'll try a new approach...
: even if something is not a standard, if many other vendors support it and
: users want it, then it is worth supporting.

That's a problem with ignoring standards; you never know what to
support. How many is "many"? How many users must want something for it
to be supported? How many other vendors must support something for it to
be supported by another vendor? The use of standards eliminates that
problem.

: >   ...and even more people, PC using people AND Mac using people think they
: >   are, for the most part, useless, bandwidth wasting, toys.

: The WWW is mostly a waste of bandwidth but still we use it because there
: are definately some useful things on it.

IMHO, the web is intended as a medium to transport text. There's lots
of tags to make the presentation better or easier, but the main purpose
is to transport text. Yes, forms and text entry fields can be useful,
but they should be used only when appropriately (as in search engines).

: There is a really cool Java
: applet (it's fairly small I think) that let's you interactively play
: with JPEG conpression settings. It's pretty handy if you want to hand

: tune the compression matrix.

The same could be done with a short C program, and it would probably
work better, too. Java certainly has uses, but it's nothing close to
what the marketroids are making it out to be.

The following is taken directly from bit.listserv.novell; the original author's
name has been removed to avoid embarrasment for him:

<BEGIN QUOTE>

We have a number of Novell Servers (3.1, 3.12, and 4.1)

We are having problems with 4 new PowerMacs, 3 7200/90's and a 9150.
They regularly get a message that the "The Server is busy, try again later".

We have no problem connecting from any other Mac at any time.
The old Macs can connect to 3.1, 3.12 & 4.1 servers every time.

The new PowerMacs can connect to the 3.1 & 3.12 servers everytime.

Only the combination of 4.1 server and PowerMac leads to the "Server Busy"
message.

I've called Apple's tech support and they promised to "escalate the issue"
to Cupertino which is jargon for "We'll be sure to throw it in the garbage
as soon as you hang up."

<END QUOTE>

Now, let's all follow our resident gadfly's advice and run right out and buy
PowerMacs! Bwahahahahahahahaha!

Also taken from bit.listserv.novell:

"The NT DOS client lives on in the great tradition of its (all too close) MS LAN Manager client predecessor. The assumption seemed to be that you should be so glad to have a server connection at all that you didn't care about having any RAM left to do any real work."

So here we are, "limited" to 4 megs of RAM total, running multiple protocols under MiNT and even X11, while under MS-DOS with MSnet Client for DOS, I can't even run EDIT wihtout stopping the network... Yep, the gadfly is right, we should get PC/Mac computers so we, too, can enjoy the benefits of "modern" software...

I think perhaps I'll stick to "old" software that actually lets me do something useful while the network is connected, thanks anyhow.

Cases in point: US Robotics "HST" protocol. Works only with USR modems (and
not all of them - it requires a Courier or DS).

V.fast - a demi-buttocked approach to getting the jump on V.34; works only with
other V.fast modems, and not all implementations of V.fast are the same, so one
from, say, Bullet may not be able to negotiate a V.fast connection with one from
Cardinal.

Manufacturers and software publishers who go ahead and implement non-standard
"features" usually end up with a whole bunch of customers who have "orphan"
products. I don't include TOS-based computers under that banner simply because
(1) there are still companies making TOS-based systems, and (2) alternate,
"standard" OSes (e.g., Linux, Unix, FreeBSD, ad nauseum) abound. Arguments to
the contrary may be directed to dev/null.

Instead of running "Install.prg", run "HDutil.prg" and modify the
A:\AUTO\ICDBOOT.PRG settings. "Install" is for a brand-new, bare drive.

>#2. What kind of cheap little hard drive can I put inside the Falcon, mainly

It should work with any IDE drive (you'll need an adapter plug/cable unless you
get a 2.5-inch drive, though).

True. But I am still glad that Sun create Java and Directory created
Shockwave. I am also glad that Netscape implemented frames before they
were supported by the HTML standard.

>For example, if I put up a page that used only STG bitmaps and CVG vector

Browser specific features are probably, in general, a bad thing. But
stardards that are open to adoptation by any browser creater are
not. Anyone can support Java and Shockware. All it takes is a lot
of work.

I am very much amused by the concept of "fully emulating MS-Windows." Let's see, we'd need to create a GUI that crashes frequently for no apparent reason, slows down operations by a factor of at least 2x, /requires/ a hard drive of at least 50 megs (and won't work comfortable with less than 120 megs), /requires/ a minimum of 4 megs of RAM to operate in the mode for which it was designed, and runs like a 2-legged dog with less than 8 megs, /requires/ a CPU running at no less than 20 MHz to be tolerable, and doesn't really get comfortable unless you have a 64-bit data bus and a 100 MHz CPU, costs as much as an entire Atari computer does these days, is badly supported (and if you have to call the publisher for help, you must pay for a long-distance call, wait on "hold" for up to an hour, sometimes longer, and pay for the support even if you bought the software), has at least 2000 "known" bugs...

You know, I don't think I /want/ to run an OS that is capable of "fully emulating MS-Windows."

OK, that's exactly 2 explicit replies. I am currently working with another person to get the proposal properly assembled; it will be announced in all of the comp.sys.atari* groups when the RFD (Request For Discussion) is posted, and again when the CFV (Call For Votes) comes around. You MUST subscribe to news.groups to particiapte in the discussions - something that was /not/ told us when the RFD to remove our previous binaries group was opened. This is a nuisance, but you'll only have to carry the group for a month or so, as a 21-day discussion period is required, and the CFV can take palce between 21 and 30 days after posting.

If anyone else has any comments, PLEASE make them now, either here or in email.

What's the URL?

I did get in touch with the Webmaster at http://www.filez.com, and he's adding an "Atari" button to the search engine there. Very nice guy, I sent him the most common file extensions for Atari archives, and Hallvard's list of Atari ftp sites.

In any discussion of cost, one must consider system overhead. For a
contemporary PC or Mac, this is CONSIDERABLE.

An ST or Falcon will run in what Mac's and PC's waste!

So what's taking up the extra 7.5-15.5 Megs?

ys.atari.8bit

Somebody already pointed this out, but I'm going to repeat it
because I think it makes this thread moot.
There already is an alt.binaries.comp.atari8bit.

That is the one in question, it doesn't seem possible to get anything
in there,
I would like to add my support for either a new binaries group for
the ATARI platform or making the existing one none moderated? if that
is an option?

Cheers..............!ynoT

I considered that, and would have preferred it, but when I submitted the proposal to one of the group mentors, I was informed that, precisely because the existing moderated group had been killed at the request of the moderator, it would be extremely unlikely that a new groups would be approved. Alt. groups are far easier to create (anyone who doubts that should start counting alt. groups in his NG file <G>), which is the logic behind the current proposal.

The "existing" group was removed (rmgroup) in March or April. If your
ISP says otherwise, then they aren't keeping up with changes.

I thought posting the charter was a bit premature, but this one is almost perfect.
I suggest we adopt it as the "official" charter.

Again, comments welcome.  Flames to root@uni.edu <EVIL GRIN>

You could try bypassing the moderation. Pretty simple to do. Left as an exercise for the reader.

> I would like to add my support for either a new binaries group for
>the ATARI platform or making the existing one none moderated? if that
>is an option?

It is a Big-8 group, and if you can prove that the moderator is not doing the job he signed up for, you can put forth a proposal to replace him or to remove the moderation. (Note this will make it the second comp.binaries.* newsgroup to not be moderated, alongside comp.binaries.apple2 which has never been moderated and still gets people posting non-binaries to it.) Comp.society.folklore went through a vote to remove moderation (it failed, but a new moderator did get appointed and it now gets traffic). Take the cause to news.groups and put together a complete proposal for submission to news.announce.newgroups.

I myself have no vested interest in the topic. I'm only suggesting a course of action.

Followups directed to news.groups.

Some years ago I used to be the editor for "Inside Info", the disk magazine for ACE, the Atari Computer Enthusiasts user group in Sydney Australia. Just before the release of the Falcon in this country I wrote an article speculating on the future of this machine. While I don't profess to be totally factual It is interesting to read this now a few

years later after I wrote it (in late 1992).
Note that prices are in Australian dollars at that time about .70 US$ and Australia was in a severe economic recession.

I was doing a cleanup on my PC (I also have a Mac) and came across heap of text files I saved when I sold my ST.

ATARI and the Falcon

By Phillip White (ACE Editor)

Previous issues of Inside Info have looked at some of the problems associated with Atari, ranging from gross mismanagement, to conspiracy theories. Even amongst dedicated supporters of Atari, there is a high level of cynicism regarding the ability of this company to promote its product.

The Big news in recent months has been the Falcon 030, the successor to the ST and saviour of Atari. After an initial flurry of news regarding the specifications and capabilities of this machine, it appears that it will be quite some time before they are going to be available.

A company such as Atari which is making a loss, has a low consumer profile and a diminished market share, is not in a good position to launch a new product in a saturated computer market. The perception of the company is that of an arcade machine manufacturer that also makes "home computers". In spite of the efforts of Atari enthusiasts this attitude still persists, and at times has been reinforced by Atari themselves.

The Atari ST when it was first introduced, was in a good position to be considered by the home computer user. It was much cheaper than the Apple Macintosh and used a similar graphics interface which gave it an edge over the unwieldy MS-DOS machines. The low price of the ST was possible through some ingenious cost cutting measures and allowed Atari to promote the ST as the "Power without the Price" computer.

Atari was to enjoy a period of success with the ST and many new computer users as well as existing Atari owners were attracted to the new model. The inclusion of MIDI ports on the ST meant that Atari had a sizeable representation in the music industry, a position it still holds today. Atari however, was slow to respond to trends in the computer industry and customer expectations which placed ever increasing demands on the performance of personal computers.

Limitations in the flexibility of the ST's design meant that it was difficult to upgrade the operating system, as well as incorporate features such as extra memory and enhanced graphics capabilities. When the ST was released however, such features were seen as luxuries and what the ST had to offer in terms of performance and price was more than enough for the home user.

An attempt was made to rectify some of the design problems with the release of the STe series with an operating system upgrade, easier memory expansion and extended colour palette. The improvements however were largely inconsequential and the STe also came with several curious bugs, as well as Atari's strange policy of soldering in the RAM to disallow user memory expansion.

At the time of the STe release, Atari announced that a 68030 computer known as the TT would be available as a high end Atari platform. Along with the TT, Atari produced the Mega STe which essentially was a high performance STe but without the extra features of the TT. When these impressive machines were finally available in Australia, there were virtually no retailers left who stocked Atari products and very little software which took advantage of the features these computers had to offer.

Atari adopted a minimal promotion strategy for the ST and subsequent products, in the belief that retailers and existing users would attract new customers to the platform. The legacy of this strategy can be seen with the almost total lack of retail outlets for Atari computers and software in Australia. Also, countries like Germany, which showed promising sales figures, received special attention from Atari while their market in the rest of the world was neglected.

A major consequence of this has been the steady departure of 3rd party software and hardware developers from the Atari platform. Many developers who initially were attracted to the ST, anticipating that Atari would get behind their product and improve on it, have abandoned Atari altogether. There is little incentive in developing an application for a computer that is not selling very well and most developers have switched platforms so that they don't starve.

A side effect of this has been software piracy, by no means exclusive to Atari, which has discouraged developers even more. Sadly, many users resort to piracy because of the lack of software available locally. Few users are willing to risk purchasing applications from overseas without evaluation. Many dedicated users who ordered from overseas and demonstrated their purchases at user group meetings, have changed platforms, thus depriving many ST owners the opportunity of reviewing the latest software.

The Plague

Even without the lack of promotion, Atari would still be having a hard time of it along with Commodore, Apple and IBM. The computer market has been saturated with MS DOS compatibles which are sold at extraordinarily low prices, partly because of the recession and partly because of the sheer volume of units. For under $1500, a 386SX PC can be purchased with 2 Meg of RAM, 85Meg hard disk, Super VGA monitor, mouse and windows. Even better deals are available if one is prepared to shop around.

The early success of the PC relied on its ability to be configured any way the user desired, ranging from that of real estate management to

EPROM burning. The command line interface of the MS-DOS operating system although inherently powerful, is not easy to master and tends to discourage multi-application use. This meant that most PC's tended to be used in the workplace in dedicated roles and were generally not considered to be a good choice as a home computer.

Steady improvements have been made to the PC in the form of increased speed, memory expansion, graphics enhancement and an easier user interface in the form of Windows 3. Although the PC is still difficult to configure, these improvements, together with the current low cost, have made the PC attractive to home buyers as well as businesses. The vast number of applications available at reasonable cost has also helped sales of the PC. Many home users can now use the same software at home as they do at work, a situation generally not possible with the ST, due to the lack of compatible applications. For an ST owner who is lamenting the demise of quality software, the PC is a very attractive proposition.

Along with cheaper PC's, the other computer companies have reduced prices and introduced new models. The Apple Macintosh, while still expensive compared to any Atari or a base model PC, is more affordable than ever and worth considering for the features on offer. Soon to come from Apple are even cheaper models. Commodore, while almost in the same boat as Atari, will soon release the low cost Amiga 600 with internal hard drive and the 68040 Amiga 4000.

The impact of all this on Atari can not be underestimated. With virtually no advertising, retailers, software, and customer support in this country, there is little incentive for a prospective buyer to purchase an Atari computer considering what is on offer elsewhere. Many existing ST owners have become disillusioned with Atari as local support for the platform steadily diminishes. Long time supporters continue to abandon the ST and purchase PC's and Mac's.

And so it is that Atari, which is in a dismal position brought about by its own mismanagement and economic factors beyond its control, is seeking to restore its fortunes with the introduction of the Falcon 030. If their past performance is anything to go by then the demise of Atari will be assured. Atari is taking an enormous gamble with the Falcon and it is entirely possible that it may be too late to save this once great company. The fact remains that Atari do make very good computers, but the world is not going to buy them if they make it difficult to do so.

On A Wing and a Prayer

~~~~~~~~~~~~~~~~~~~~~~

The Falcon is by all accounts an impressive machine and has features which would significantly add to the cost if included on other computers. The digital signal processor, video and graphic modes, audio processing and networking capabilities would conceivably consist of several thousand dollars worth of plug in cards if they were to be implemented on a PC or Macintosh. Yet the Falcon in its most basic configuration will sell for approx AU$1000 (converting from announced US prices). Add a cheapie monitor and Hard Disk and the one Megabyte Falcon
~~~~~~~~~~~~~~~~~~~~~~

weighs in at around $2000.

Atari have indicated that this will be their "low end" computer, with the implication that other more powerful models are planned along the same lines as the Falcon. There are some interesting questions as to what the new Atari range will consist of as there will be an overlap of computers with varying features and prices. Atari can ill afford to spread its budget to include all models in its catalogue.

It is entirely possible that Atari would be in a less precarious position today if they had concentrated on improving the ST range, instead of diverting resources into projects such as the ATW, Hotz Box, STacey, ST Pad, and ST book. Atari wasted much time, energy and money with these products which in some cases never eventuated or were unmarketable. In attempting to cover all bases, Atari failed to appreciate that the ST was and is the computer of choice for many users simply because of its excellent performance, ease of use and price.

Atari have now returned to the power without the price concept with the Falcon. A departure from the past can be seen in the options available in terms of freedom of choice and acceptance of industry standards. No longer is the buyer forced to accept an Atari monitor or a hard disk with custom host adaptor. Any industry standard VGA monitor and SCSI hard disk can be connected if so desired. The operating system is now largely disk based, making TOS upgrades much easier than before. Memory expansion with the Falcon however, is a worry, instead of commonly available SIMMS, Atari have devised propriety memory modules. It is expected that 3rd party modules will be available as an alternative.

Atari intends to focus attention on the multimedia features of the Falcon. This rather nebulous term means different things to different people and can be as diverse as quicktime movies on the Mac', 24 bit colour Opalvision for the Amiga and a slideshow with sound on a PC. A loose definition of a multimedia system is one that can record and play, digitally processed image and sound for entertainment and educational purposes.

This is something that most computers, including the ST, are capable of in some form but is generally accepted that to be viable, multimedia must be able to record video and sound, process it and replay it at near broadcast quality. There are many variables associated with this ideal, but the Falcon would appear to be the only computer that has this function built in. Most other comparable multimedia systems are either expensive dedicated workstations or pricey plug in cards for the high end Macs, Amigas and PC's.

Atari is almost certainly going to face an uphill struggle in marketing the Falcon. Its multimedia capabilities will no doubt result in rave reviews of the machine, but there is limited demand for this capability at the present time. Most computers are purchased for the less esoteric tasks, of word processing, maintaining databases/spreadsheets and a bit of DTP. For these jobs, a cheap PC will do.

Speculation Corner

In the tight economic climate, the Falcon may well be seen as too frivolous, rather like Commodores CDTV. There is however a push within the computer industry to accept Quicktime as the standard for multimedia presentations. It is anticipated that most computers will be able to replay Quicktime, but recording movies requires relatively expensive video processing hardware. If quicktime is adopted for the Falcon it could well find a niche as a creator of Quicktime presentations.

With Desktop Video, The Falcon is certainly light years ahead of anything Atari has had to offer before. Atari is also light years behind in this area, with the clear leader being the Commodore Amiga. Both the Amiga, Mac and PC's can be fitted with Video cards which offer Desktop Video at varying budgets. As impressive as the colour and video capabilities of the Falcon are, Atari has made a grave mistake by not providing slots for graphics cards. Paint, animation and modelling software has lagged behind with Atari and it is unlikely that established videomakers will switch over to the Falcon unless the applications exist. It is possible that as an interim measure, software will be ported over from other platforms to fill the gap.

Probably the most astounding feature of the Falcon, which will guarantee sales is the audio processing capabilities. The inclusion of 16 bit CD quality 8 track direct to disk recording is amazing. To have it in a computer for a thousand dollars is revolutionary. True, a big hard disk is required, and appropriate software, but for under $3000 a musician can have the recording quality and creative control of systems in the $10000 to $15000 range. Unlike MIDI which appealed to electronic musicians, hard disk recording is also of value to acoustic musicians thus opening up a large market for the Falcon.

There are many possible uses for the Falcon, based on the capabilities of the DSP chip. Some of these are useful, some are not. The notion of plugging one into a phone line as a fax machine will either be extremely handy or just plain silly. Wild speculation on what the Falcon is capable of, will do nothing but foster suspicion and until the Falcon is readily available, it is too early to say how it will perform and whether it will prove to be the amazing machine that Atari wants us to believe it is. Atari not only has to attract new customers, but has to bring back those enthusiasts who have left the fold.

Have you considered that there are many intelligent people whose lives are not "all about computers", but they use them as tools? Why buy a hammer, when you can forge your own? Forget about changing your oil, or fixing that leak in the roof, or playing your guitar; there's a hammer to be made.

The truly stupid person is the one who gets caught up in some philosophy about how things should be done, instead of doing things the way that is most useful for them, as an individual.

The truly intelligent person knows when it is best to use the mouse, and when it is best to type a command, or write a script.

The fool has a philosophy that says there is only one best way for everyone, or that everyone has the same amount of time to spend on one facet of their activities.

Ha! Sounds like sour grapes.. Attack progress because development has ceased on the Jag and ST line. If this nation read your advise we all would be riding horses for our transportation.

My PowerBook is very satisfying as a mobile tool. Considering is more useful than the defunct Atari portable and ST Book that never saw the light of day.

Atari Jihad, not as powerful as Iran, but equally fanatical!
GREETINGS..

[When the topic was changed to the above, the thread was cut-off from all
the Atari groups to which the original thread had been cross-posted.
Since Jonathon is providing some serious and significant information, I'm
merely intervening to re-post to those groups. It would appear that
there's been a vote on this before: where were all you guys at the time?
(Given that those who might want to do as Jonathon suggests already have
access to relevant "warez" group.) Once again, I no nothing about Atari
but am just a bystander that's interested in the machinations within
alt.config.]

comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.advocacy,comp.sys.atari.st.tech,comp.sys.atari.programmer,alt.binaries.atari,alt.binaries.atari.d
x-mailer: UUCP-ST News_Out version 1.00 4 Jul 1996 Registered

This message inaugurates both alt.binaries.atari and alt.binaries.atari.d

CHARTER:

alt.binaries.atari is for distribution of freeware, Public Domain, and shareware patches, prograsm, etcetera, intended for Atari and compatible computers. alt.binaries.atari.d is for discussion of the content of alt.binaries.atari and should never contain binary files.

The following are explicitly inappropriate for posting to either alt.binaries.atari or alt.binaries.atari.d:

- Copyrighted software without the EXPLICIT permission of the copyright holder to post the software.

- "Chain letters," "get rich quick" schemes, for sale messages, or commercial solicitations of any kind.

- "My computer is better than your computer" messages, or discussions of the relative merits of any computer system. These discussions properly belong in the various .advocacy groups (or alt.flames in some cases).

- Any posting whatsoever by Peter Sinclair-Day; he does not own an Atari or compatible computer, does not use an Atari or compatible computer, and does not hold the copyright to any known software.

Very large binaries (e.g., in excess of 500k) should be uploaded to an ftp site (or several) first, and the availability (with full path) announced in a.b.a; only in the case of a specific request by a user who has no ftp access should such large binaries be posted to the newsgroup.

It is suggested that a short text message be posted in a.b.a immediately before posting a binary, explaining the purpose of the binary, the copyright status and distribution policy pertaining to the binary, system requirements for use of the binary, and any special information which may assist in determining the desirability or undesirability of downloading the binary.

This is an unmoderated group. However, it will be closely watched by the undersigned, and any blatant violation of copyright law will be immediately reported to the violator's postmaster and the copyright holder. Violations of netiquette will be referred to the appropriate postmaster if it is deemed necessary.

Rich Tietjens
syadmin at STarship and Quark's Holosuites

```

Perhaps I am confused. Isn't this comp.sys.atari.advocacy? I use NT at work (along with Win95, WFWG, Novell, and I forget what all else), and there ins't a single Atari system there; nor are there any Atari-compatible binaries of NT (thank you, Lord Bel!).

As MicroSlop goes, NT is OK - but it's not Atari, so who gives a Peter Sinclair-Day?

The difference between c.b.a.s and a.b.a is that c.b.a.s was an ST only newsgroup. ST only means that all other Atari submissions must be rejected by the moderator. a.b.a is (will be) a generic Atari software group --- if someone has a piece of Atari software from any pltform that they'd like to post (that's not WaReZ), they can post it in a.b.a and be within the confines[1] of the charter.

-Kyle R. Hofmann

[1] Confines? Ha! More like a one inch high wall made of styrofoam, judging from some of the discussions I see (and participate in :) everyday.[2]

[2] This does not mean that WaReZ will be OK in this group, just that charters generally look silly in comparison to the actual postings that occur on a group.

<tick>

: >   - New, publically released software for the Atari
<tick>

: >   - Atari software requested by someone in another group
<tick>

What about source code (ie STOS Basic etc)?

: >   Examples of off topic posts include:
: >   - Discussions or advocacy of Atari products
<tick>

: >   - Auctions or sales of Atari hardware or software
<tick>

: >   - Commercial software (WaReZ)
<tick>

: >   - MAKE.MONEY.FAST schemes and ECP/EMP
<tick>

What about advertisments? Would a .GIF containing a picture of the latest
Atari and prices be off topic?

: >   How's that? Is it agreeable to everyone?
One more thing.... no moderator, or a moderator who deletes or moves
inappropriate postings, ie I don't want to have to send a moderator my
posting, cos it costs money :)

Also, how bout keeping postings UUENCODED only :)

MAKE IT!!!!!!!!!!!!!!!

ECP is "Excessive cross posting", also known as spam. This is when you dump as many newsgroups as your news server into the Newsgroup: line and send out a message.

EMP is "Excessive multi posting", also known as spam. This is when you find all the newsgroups you can and send out a separate copy of your post to each one.

Both are Bad Things.

Hey,
     Watch it. You have broken the first Law of Usenet Advocacy.
     There is only one true OS. Everything else is useless.

     As a penalty for making a reasonably sane and drivel-free
     posting, I banish you for one week from this newsgroup.
     Your next posting must be at least 50 % invective and
     no less than 95% content free.

     8-)

     Seriously though, what's up with these OS Jihads? Why do so many
     people get so bent out of shape on these advocacy forums?
     Gawd, you'd think that there were no more pressing problems in the
     world than OS Advocacy.

     I do often find some really informative threads (even on .advocacy)
     but so much  more traffic is turning into flamefests.

```

> > Annius V. Groenink <avg@cwi.nl> posted messages to the group asking whether anyone still found it useful and the vast majority agreed that the sensible thing was to remove the group. At the request of the moderator and the readership, it is now removed.

(1) I voted to retain the group.

(2) The "vast majority" did not agree to anything. Perhaps a dozen people were even aware of the existence of the group, and I saw exactly one person (other than Annius) stating in a comp.sys.atari.* group that they agreed the group should be removed.

(3) It is my belief that Annius simply didn't want to expend the effort to moderate the group any more. Note that this is my personal belief, with no evidence to support it. However, read on...

(4) I submitted several binaries for distribution during the last month of the group's existence. They never appeared in the group, nor was their receipt by Annius ever acknowledged.

I believe that there are large numbers of Atari users who have no or very limited ftp access, who would use an unmoderated binaries group. I know for a fact that the largest ftp sites for Atari files are very slow to post new binaries to areas where they can be obtained (I have personally uploaded 2 binaries to several sites;
both have been obsoleted already, and they aren't available to the public yet).

Yes, well, thanks but it doesn't seem to have worked. I'll ask here - does anyone have direct root@domain access to send the necessary control messages to try again to create these groups? I can email the necessary header(s) and text if you aren't sure how it's done.

Really? I'm here on a T-1 line direct to the USenet backbone: I tried
to get a.b.c.a, with the following results:

News host responded: No such group

So, if your service shows that such a newsgroup exists, and it has
existed more than 6 months, I think perhaps either your sysadmin or mine
is mistaken. Mind you, I'd be happy to be wrong.

Umm... guys, I went through the trouble of creating alt.binaries.comp.atari8bit a while back - why not use it? I can think of only two reasons:

1) The 'binaries' part of the group name will automatically ban it from some news servers.

2) The 'alt' part of the group may do the same.

The only thing that would really be better than the existing group would be a new one in the 'comp.*' hierarchy (sp?). If someone wants to try and push that through, I say 'go for it'!

First of all, I say well about time with this idea! I hope that many will freely UL and DL as, for me at least, I have only one Atari BBS and Umich files are hardly updated with newer stuff. Some people don't even have a BBS to get the stuff from. I'll frequent this area as much as I can.

Well done Richard! :)

I mistyped it - since the group no longer exists, I had no ready reference,
sorry about that.

<deletia>

> According to my active list, there *is* a comp.binaries.atari.st, which

The group has been rmgrouped; if you show it as active, then you missed the
removal message. I wish everyone had.

Hmmm. AOL supports Windows users exclusively... Well, there you are.
QED!

I might take issue with the second half of his sentence, but I agree
that arguing with him is pointless.

> Those straight lines were just too ripe to pass up...

Certainly.

My $02 worth: I use NT, Win95, various flavors of DOS, Novell,
WFWG, sometimes OS/2, and some other oddments at work. For installing
networks, the command line is MUCH easier to use and to troubleshoot.
For editing text, I want a windowed environment. It's a helluva lot easier
(for me) to drag a text block to the correct page than it is to run edlin
or even vi (I use a Unix look-alike at home sometimes).

For anything other than installations, in fact, I'd rather a windowed
environment. GEM is my GUI of choice. Why a GUI? Because I might not
want to kill the current process in order to copy a disk, or delete or
rename a file, etcetera, etcetera. I don't insist that a GUI is /the/
best OS choice for everyone - in many cases, it might be the worst. But
for me, it makes sense.

And I run my CLI in a window.

Yes. Commercial advertising of any kind is inappropriate outside of the
business groups (with some minor exceptions - the .announce group would
be the right place for "reduced price" announcements that specifically
pertain to that type of system, I think).

>Ha! Sounds like sour grapes.. Attack progress because development has ceased

Progress for progress'es sake is meaningless. We have to need to surrogate
our genitalia with our computers here.

Progress is not necessarily beneficial and new does not necessarily imply
better.

Progress in microcomputers merely means implementing that which has
been standard on larger systems for decades.

VMS still trumps MacOS, despite being 20 years older...

>on the Jag and ST line. If this nation read your advise we all would be riding

Actually, this nation's transportation technology has been completely stagnant
for the last 50 years. Personal transport tech has been stagnant for nearly
100.

Well, someone get a proposal together and send it in to
news.announce.newgroups, or track down the existing moderator and ask
him to resign his position and appoint a new moderator (or moderators)
that will do the job.

When your car gets a flat tire, you don't buy a new car.  You get a new
tire, and a new spare tire too.

In this instance, Portal is correct; I'm sorry, I must have unconciously added the ".st" in the middle of that.

> I for one have been right here on comp.sys.atari.8bit on and off for nearly ten years, and have only occasionally seen reference to a "warez" newsgroup, and never quite the same name twice, or at least not regularly. Moreover, no ISP on which I have had an account -- and there have been three of them; four if you count TWO different systems here at Portal -- has ever been aware of the existence of, or willing to pick up, or has for that matter even acknowledged recipt of my requests to pick up, ANY Atari-8-bit-related "alt" or "binaries" group(s). I barely even know what groups EXIST.

I can email you a complet newsgroups list, if you need it. It's rather bulky at about 350k, but if Portal won't tell you waht exists, I will. IMHO, any and all "warez" groups that exist are pirate groups, and I won't subscribe to them, even if I can find them (there are several listed in my NG file).

Not only that, but an unmoderated group doesn't depend on the whims of one person to give it content.

> > comp.binaries.atari.st should be removed. Despite the continued
> > presence of a capable moderator, its submissions declined to the point
> > where virtually nothing was valid for the group.

This would be a valid reason /IF it were true/, but it is not. Submissions wer made - and ignored. I submitted several files in the omnths prior to the group's demise, and I have seen others state the same thing; no response was ever forthcoming from Annius. I don't know if that means he did not get the files, or simply chose to ignore them.

> > The Atari ST is no longer a very active platform,

It's tantamount to saying that "the 286 is not a much used chip any more, so we will no longer write software that does NOT use 386 opcodes." Granted, there is a lot of software that won't work without those opcodes - but probably 90% of the current DOS-based software, including most network drivers for Novell networks, work just fine on 286 boxes. I doubt that the owners of those networks using 286 servers and clients would be very favorably impressed by anyone who told them that they would be required to give up their existing hardware platforms.

> another (I forget which) of the Windows NT groups...

It's also the way things are done, and frankly, it blows. Getting an alt. group for Atari binaries effectively removes the controls exercised by the "Big 8" cabal (and such a cabal obviously exists, else it would not be necessary to put a new group proposal to a "vote").

> > Annius V. Groenink <avg@cwi.nl> posted messages to the group asking

> affect the masses, without consulting those masses. Go watch "Fern Gully."

The fact that the question was posted in comp.sys.atari.st is true. The allegation that "the vast majority agreed" to rmgroup it is either a mistake, or an outright lie. Since I don't know if the person making the statement knows the truth or not, I will assume it's a mistake.

There is no longer such a group, Greg. It was removed some months ago (March? April? May?) at the request of the moderator, and over the objections of the users (the few of us who knew that the group existed).

We're not replacing a flat tire, we're replacing a stolen car.

Actually Todd is saying that Dave's NT Design team have experience with
other OSes. Dave himself for example is pretty familar with VMS :-)

Here in New England, we have a term to describe people whose posts are of
this nature. . . "stupid fahka."

>> Besides, Peter says, we always have Mac clone makers if Apple goes kaput.
>> Hmmm... who will develop the OS?
>
>Claris, PowerComputing, Motorola, UMAX/SuperMac, IBM to name a few..

Yep, that assumes that the sale goes through smoothly after liquidation
proceedings. If 1/3rd of Apple's net worth was obsolete inventory that
was written off (as you incorrectly claim), the company probably would
take months to sell off, with creditors holdingup the sale to try and get

a bigger piece of a tiny, shrivelled pie.

>So where are these TOS clones? How come I can't find a full color double

Find me a double-page, color spread ad for Apple in three years' time outside
of a Mac mag. Assuming Apple's still in business. . .

>Whoa...My Powermac was much cheaper than your 030 Falcon.. The cost is 10% of
>that 10k you stated..i suggest as a citizen to know your facts..

Oh, really? Just how much did you pay for your PowerMac?

 I agree that this is not the place to post such advertisements, but what makes it
" ..
 base,immoral, perverted,"? and why are you the authority ? Funny but I have this
outmoded notion that consenting adults have the right to do what they want. Has
something to do with personal freedom.

Joe Doro

: >every now and then for about a month now, secretly hoping that it might be

:   The content of your post would indicate otherwise.

I beg your pardon? I honestly do not have a clue what you mean to say.

: >I cannot say whether Pete's arguments were or weren't good, and I must say

:   Then you really are in no position to critizise; are you?

Hmmm... well, is this newsgroup only for people who've been on it for years?
From its name I suspected that it might be the right place to discuss pros
and cons of Atari computers vs. others, am I wrong? So when I find this
group full of threads whose names are insults to one specific person, I
wonder how come? I haven't got the chance to read the starts of this from
years ago, and I'm in no particular mood hunting through hundreds of
postings quoting each other and adding yet another childish insult, either.

: >that I don't care either... what I want to say is this:
: >Assuming that you are right, and Pete's opinions and arguments are completely
: >and utterly shit -- then what better are you all creating threads with the
: >insults right in the subject? I'd think THAT'S completely and utterly

:   Well, you've already yourself admitted that you haven't been paying
: attention, don't care and that you aren't familiar with the content or nature
: of Petey's posts.

I stated that I didn't pay "attention" to your flamewar, yes. I did *not*
state that I didn't care. If I didn't, I would not comment on the topic.
I would unsubscribe the group. I wanted to express the following:
Even *if* his postings are shit, and whether they are or not doesn't matter

for this argument, the way you react to them is *not* better at all.

:   If you payed better attention you might no be so 'perplexed'.

Am I perplexed? Hmmm... I'd say no. I'm just wondering whether what goes on here is the right way to behave in a newsgroup, even *if* it's *.advocacy. I looked into other *.advocacy groups, namely ms-windows.advocacy, and there I could find things like "Macs suck" and "Win95 has thrown back IT for years". Not exactly highly intelligent stuff either, but *lightyears* away from a flamewar like here. So I posted my thoughts about it, in what I regard as a polite manner. No need to attack me, I should think?
Again, I could not "pay attention" because I am a newcomer. But is that a reason to treat me unworthy to express my feelings about the ongoing in this group?

:   You also may have noticed that the 'Slam-subjects' directed at Petey
: originated as demands for support and examples for threads he originated.

Hmmm... do you mean that you (whoever) created a thread for each argument or opinion of Peter's that you considered wrong? Insulting him as stupid, in a new thread for each time he maybe was? Cause that's how it looks like to me.

: >shit as well. OK, maybe he is of a different opinion than you, and OK
: >maybe his arguments are nonsense and objectively wrong (I don't say they
: >are, I say they may be), but reactions like yours are *not* the way to
: >deal with such. You might give proof to what is wrong with them, or

:   When rational discourse fails, there is no point in maintaining
: civility. It is wasted effort.

When non-civility fails either, I believe there is no point in maintaining communication. I believe this is wasted effort then as well.

:   Also, burden of support falls on the one who asserts. (namely
Petey)

Huh? I don't get you.

: >failing that you might give reason what you think is wrong with them.
: >But if you start insulting, the thought appears that you don't have any
: >arguments to put against his either.

:   See, there you go not paying attention again. Rational discourse has
: faded on all sides. It's now a flamewar proper. There are no 'arguments' any
: more. Catch up already...

OK, then could you not agree on leaving the flamewar in one thread, or in as many as the flamed one creates? I get the feeling that Peter only replies to whatever insult you come up with against him. And maybe, once in a while, replies to a post that does not insult him. So the way might be not to insult him whenever the opportunity arises, but to discuss matters rationally not with him, but with the other readers of this group, and to keep the flamewar in one thread. Or maybe to add a "FLAME:" to the subjects of the flame threads.

I just cannot believe that grown-up persons like you, me, and Peter, can't get along without rendering a whole newsgroup practically useless. There are other ways of dealing with ones who are a pain in the ass. Ignoring, for exapmle. Or, if that fails, complaining to postmaster@his.site. Or, if that should fail, mailbombing. Or, if that should fail too, killfiling Mr Sinclair-Day. But I don't want to killfile *everyone* here that contributes to Peter-bashing, because I think someone might add useful thoughts to some other discussion here. And, even if you can't believe it, I think Peter might do so too, when given a chance and not brought to rage by insults like yours.

I'm no particular fan of Peter, and some of his comments did strike me as stupid, too... I just don't feel that your reaction to them is appropriate. What I feel appropriate I stated in my original posting, and above. When you have tried all of this, and it didn't work, then why do you overreact like this? Why do you make people feel that "we need a new newsgroup", istead of trying not to waste the old one anymore like you apparently did for the last couple of years?

Yours,
    Erik Meltzer

But still, if I could "pic" for free any little machine from the 8000-AXP
family for my garage, even if "nude" (ie missing sidepanels) it
would be a "celebrity" ;-))

And PLEASE now stop this stupid thread, will you?

Uwe

All postings to inappropriate newsgroups are immoral, perverted, and corrupting.
Their content is irrelevant.

1) You, of course, _realize_ that by responding to this message you
are also crossposting, right?

2) The morality or lack thereof should not be the issue; the issue is
massively cross-posted advertisements of any type, especially those

appearing in inappropriate newsgroups.

3) See news.admin.net-abuse.misc for more on how to combat this spam.

4) Terminate this thread! Give it no more reason to exist. Start a new one if you must, but this discussion really does not belong here.

Dave Baseley

```

>outmoded notion that consenting adults have the right to do what they want. Has
>something to do with personal freedom.

and what makes YOU think that everyone reading the newsgroup is a
consenting adult ??? postings should take into consideration that
minors have just as much access to these newsgroups as your consenting
adults do, the internet does no have a "18 only" sign at the front
door, would you post a sex advert somewhere you kew minors would have
access to it?,
I have this personal freedom you speak of, but I dont think it
stretches to immoral perverted indecency,

No, but I wouldn't post one anywhere :) Trying to make all the internet suitable for kids is what the US government tried to do, and fortunately didn't manage. There's no way you can prevent kids from accessing wherever they want on the internet.

I agree that posting it here was totally inappropriate and wrong, but posting it in say alt.sex would not be inappropriate, yet kids can read that.

You know, everyone is speaking about the "right" to post anything up on the Internet. But with that right comes responiblity. You must remeber that not everyone wants to see this stuff and some should even see this like children. I do wish people who advertise this sort of thing will stick to speciality newsgroups instead of broadbasing it everywhere, it's like that in the real world BTW.

And those who feel that 'they' shouldn't have to be protected because the children must be, do you let your Playboys out where your kids can read them? Thought so...

Eric Noss

     Oh really? How many children have the money to buy their own computers
these days? How many children have accounts with the phone companies or
ISPs?

     This isn't a free broadcast medium. It does take a level of knowledge and
some non-trival expenditure of money on electronics to access.

     So? The real problem isn't some spammer but some lazy slob of a parent
that have no clue as to what their kiddies are up to and expect the whole
world to be thier baby sitters.

     Nevermind that the ad itself was not obscene (not even by American
standards which are obscene themselves).

>door, would you post a sex advert somewhere you kew minors would have
>access to it?,

      Never seen a Playboy ad on TV?

>  I have this personal freedom you speak of, but I dont think it

       Nah... most non-newbie wintel users are quite familiar with the inner
workings of their machines. This, unfortunately, is quite the necessity and is
even more severe under Win4 (JEDI refuses to refer to this latest upgrade as
if it were something more than incremental).

>Hmmm... well, is this newsgroup only for people who've been on it for years?

        A MONTH would be all that would be required to discover a thread with
something substantial in it.

       You are trying to make comments on things you admit to knowing nothing
of.

>From its name I suspected that it might be the right place to discuss pros
>and cons of Atari computers vs. others, am I wrong?  So when I find this

        What do you think the flamewar degenerated from. If you payed
attention to the flamewar itself you might have picked that up.

>group full of threads whose names are insults to one specific person, I

         So, you complain about having valuable time saved by WELL MARKED
threads?

>wonder how come?  I haven't got the chance to read the starts of this from
>years ago, and I'm in no particular mood hunting through hundreds of

        Don't kid yourself. These threads didn't start years ago. This isn't
Ent. vs. SD from r.a.s.s. (now rassm).

>postings quoting each other and adding yet another childish insult, either.
>

>
>I stated that I didn't pay "attention" to your flamewar, yes. I did *not*
>state that I didn't care. If I didn't, I would not comment on the topic.

You stated explicitly that you didn't care about the validity of Petey's
ideas.

>I would unsubscribe the group. I wanted to express the following:
>Even *if* his postings are shit, and whether they are or not doesn't matter
>for this argument, the way you react to them is *not* better at all.

That's rather superficial. It seems that you cannot be bothered to go
below the very outer surface of an issue...

>
>:   If you payed better attention you might no be so 'perplexed'.
>
>Am I perplexed? Hmmm... I'd say no. I'm just wondering whether what goes
>on here is the right way to behave in a newsgroup, even *if* it's *.advocacy.

Well, if you'd been reading this group for an ENTIRE MONTH, you'd know.
Browsing the subject headers don't count.

>I looked into other *.advocacy groups, namely ms-windows.advocacy, and there
>I could find things like "Macs suck" and "Win95 has thrown back IT for years".

...not reading the POSTS in that group either I see...

>a polite manner. No need to attack me, I should think?

You are engaging in the same behaivor that got Petey-boy flamed to
oblivion...

>Again, I could not "pay attention" because I am a newcomer. But is that a

No, you just couldn't be bothered to actually look into the issue
before making comments from the peanut gallery. Who knows. Petey-boy could be
suffering a serious injustice but, you'd never know.

>reason to treat me unworthy to express my feelings about the ongoing in this
>group?

Then actually attempt to inform yourself. It is not an active group. A months worth of posts in here should be worth a day or two in c.o.m.w.a...

>
>:   You also may have noticed that the 'Slam-subjects' directed at
> Petey
>: originated as demands for support and examples for threads he originated.
>
>Hmmm... do you mean that you (whoever) created a thread for each argument
>or opinion of Peter's that you considered wrong? Insulting him as

See... you can't even be bothered to pay attention to a post you are responding to. Although, considering that the only headers that you've payed attention to lately are the pure flames, it's not to unpredicted that you actually missed the ones like: Peter can't be bothered to support his own argument.

After some chiding he finally came up with some Mac DTP app I've never heard of.

>stupid, in a new thread for each time he maybe was? Cause that's how it
>looks like to me.

Try paying attention. It helps.

First, keep in mind that Usenet news is *not* restricted
to the Internet.

> But with that right comes resposniblity.

For example, whoever you are, whichever of this long list
of newsgroups you come from, *why* post it to comp.sys.cbm? *None*
of this has anything to do with 8-bit Commodore computers. I bet
most of the 8000 nude celebrity pics are in jepg format, which
cannot yet be displayed on a Commodore 64 or Commodore 128. I know
this didn't come from comp.sys.cbm. So I could trim comp.sys.cbm
out and still get to whoever sent this to us 'in public', as they
say, 'no private e-mail'. But what about the *responsibility* to
avoid mindlessly posting this thread to umpteen different newsgroups
because you are either too lazy or too unskilled to trim down the
newsgroup distribution list?

Hint #1: if you don't know how to trim the distribution list,
simply do not respond to a posting that was distributed to more
than 3 newsgroups. It's that simple. If you are spreading this
all over the place for no better reason than lack of knowledge or,
worse, pure lazimess, *hold* *your* *tongue*. There's someone
else out there who has the same opinion (or close enough) who
is prepared to take the time to avoid this kind of spam
multiplication.

Hint #2: if you don't *know* what a newsgroup is about,
don't post to it. And it is no excuse to say, 'it was crossposted
on my newsgroup, I just hit "reply".' See hint #1.

Virtually,

Bruce R. McFarling, Newcastle, NSW

Eric Noss (mrmaddog@prolog.net) offered:

> You must remeber that not everyone wants to see this stuff.

AND I must also remember that not everyone is required to read a posting
with the nauseous word "nude" in the subject line. Goodness me!

Next Tony Greenwood (stosser@airtime.co.uk) cautioned:

> ...postings should take into consideration that minors have just as
> much access to these newsgroups as your consenting adults do. I have
> this personal freedom you speak of, but I dont think it stretches to
> immoral perverted indecency....

Few things will pique an adolescents interest more than for an adult to tell them that something they see as pleasant, i.e., nudity, is "immoral perverted indecency". God, what a weird attitude. You did notice that interested parties had to SEND for this material, didn't you? It isn't distributed on the net and it probably will be MAILED to the recipient. Please note that there was no mention of donkeys, leather, children, etc.

Then Dave Baseley (dbaseley@cartech.com) ordered:

> ....[Blah blah blah (at least three bags full)]....Terminate this
> thread!...this discussion really does not belong here.

It's one of the fundamentals of discuss/debate, Dave, that you don't put forward your views and then imply that there is nothing more anyone else can possibly add by declaring the subject closed!

AND I'M GETTING QUITE TIRED OF YOUR CONTINUAL CROSSPOSTING, TOO, DAVE!

Bob Gray   gray@utopia.nrl.navy.mil   Washington DC

newsgroups: comp.sys.atari.advocacy

As an ex-Atari user who has migrated to the Macintosh platform, I fail to understand why so many Atarians in this newsgroup seem hostile to the Macintosh. Perhaps it is the perhaps obsessive Apple evangelism by this Sinclair person, but I've noticed the same pc attitudes in other Atarians. There seems to be a marked bias by Atarians toward pc's rather than Macintosh. Forgetting for the moment arguments about megahertz, transistors, or prices, I would think the similarities in the icon-based computing environments of Macs and Ataris would make it a natural switch from one platform to the other.
On behalf of all Macintosh-dom, I apologize for Sinclair's rabid defense

of the Macintosh in this newsgroup. It would seem unnecessarily
antagonistic to continually promote a platform or continue a hostile and
aggravating thread in a newsgroup devoted to another subject.
As for why many Atarians seem to be so pc oriented, I think its about
computer machismo. For many people (we're talking guys here mainly) the
more bells and whistles, complex acronyms and technical incomprehensibles
a machine has, the more powerful they feel. A machine like the Mac,
designed to be easy, powerful and user friendly kind of kills the joy for
them of being a master computer wizard. Must be pretty threatening to use
a computer like the Mac that smiles at you on start-up. Bill Gates uber
alles! One Microsoft planet, no more of this easy to use stuff for real
computer men!!!

How can you blame him for what Commodore execs did!? That is idiotic!
I suppose you blame hard working people like Don Thomas and Bill Rehbock
for the demise of Atari, too.

>> I wasn't in marketing. But I *did* learn English.

>Yea, if you say so. But that English did not help you comprehend in the market
>needs, dumbass...

Who are you to talk about market needs?!! You, an Apple supporter, a
supporter of a company who for years tried to shove over-priced
underpowered pieces of CRAP on the consumer! You blast an ex-Commodore

employee for the fall of the Amiga when your own precious company is
in dire straits. Once again, you show us how much of a hippocrite
you are.

>No wonder your unemployed..Nobody wants to be associated with one who failed
>the Amiga, dumbass.

You are pathetic. What I can't see is how anyone would want to be
associated with YOU.

>As an ex-Atari user who has migrated to the Macintosh platform, I fail to
>understand why so many Atarians in this newsgroup seem hostile to the
>Macintosh.

Actually, I think it's because we have an utter moron, Peter Sinturd,
on this group, spouting his Mac advocacy and trashing Atari. Other
readers have become hostile to his activity, and I think trashing the
Mac became part of trashing Peter.

> Perhaps it is the perhaps obsessive Apple evangelism by this
>Sinclair person, but I've noticed the same pc attitudes in other Atarians.
>There seems to be a marked bias by Atarians toward pc's rather than
>Macintosh. Forgetting for the moment arguments about megahertz,
>transistors, or prices, I would think the similarities in the icon-based
>computing environments of Macs and Ataris would make it a natural switch
>from one platform to the other.

Perhaps some see the same problems facing the Mac as did the ST, and
that's why they are not willing to jump on board a similar platform.
Yes, the ST and Mac are very much alike, maybe that's why Atarians
shy away from it since the ST's demise is so much a recent memory.

>On behalf of all Macintosh-dom, I apologize for Sinclair's rabid defense
>of the Macintosh in this newsgroup. It would seem unnecessarily
>antagonistic to continually promote a platform or continue a hostile and
>aggravating thread in a newsgroup devoted to another subject.

I don't think posters (flamers) on this group have anything against other Mac users, it's just Peter. Don't take the insults personally, because I think most people have separated a total user-loser like Peter from other users such as yourself.

>them of being a master computer wizard. Must be pretty threatening to use
>a computer like the Mac that smiles at you on start-up. Bill Gates uber
>alles! One Microsoft planet, no more of this easy to use stuff for real
>computer men!!!

I have no like for Microsquash or Bill Gates. I would rather see them go belly-up. There's too many things to hate in the PC industry nowadays.

Having said that, now I can say MACINTRASH SUCKS!!! Did you hear that, Peter!? :-)

Todd Reed (Kronos@wco.com) wrote:
(please refer to his post in this thread)

It is nice to read a well thought-out post .. thank you!

We are all *mostly* computer interested and literate. A combination of a lack of people skills and an adversarial position do little to help keep the discussion on an even keel (note the use of profanity - also note that I am not a prude).

The PARC, Mac, Atari, Amiga (and even Windows - if they would just get rid of the "directory tree" and stick to the simple "see the file" list open folder and "don't see the file list" closed folder thingy) are all nice machines as far as GUI's are concerned. And, hindsight being 20/20, we can all be a little critical of 5 to 15 year old market strategies.

I think most people simply believe that there just wasn't enough competition in the market place. It would have helped if there had been an industry standard that all software and hardware could have been written to like the MIDI standard. But, oh well.

There really wasn't the revolution that was envisioned by the gurus of the 60's and 70's (the computer as the communication and information source of the "people" - whatever that means - grin). I need to find out more about Oracle - science fiction finally becomes science fact. Where is Benford, Bova and Card when you really need them.

Like the 520ST! Considering that Apple hasn't made LCIII's in 2-3 years, yea
its considered underpowered today. As for expansion, lot more than the hack
and slash 520ST..Plus the LC III was one model of the Mac family were choices
of more expandability was offered, dumbass.

Although
>   this is not altogether unusual [for apple].

I don't keep track of PowerComputing and Umax distribution system. I know that
Power is emulating Dell and Gateway of distribution through an 800 number.
Seems successful. If Mac clones are not available in storefronts in your area,
how is this Apple's fault.

>
>   This also bears too much similarity to the state of Atari in these
parts.

That is utter bullshit.. Power is only two years old and brings in more
revenue than Atari does.. Power sells direct mainly and also lets the catalog
mailorders like MacMall, MacZone, MacConnection and MacWarehouse to name a few

to sell the complete line of their Mac OS computers.

>>I am sure that there are other retailers that would carry the Supermac S900.
>>Why not give UMAX a call and ask for the nearest retailer...... As for me its
>>the catalog/mailorder way..
>
>   Mailorder eh? Sounds like the mac advocate has no storefront support
>   for the machines he advocates.

Nope..For me it's convenience and saving sales tax.

When the ST came out in '85' it was considered hardware superior at the time
until the Amiga came out in force..I opted for the Amiga instead..

What is this ferengi babble, jabba...What a dumbass. Desktop publishing is
being used more often in English/Journalism classes. When students have
experince with this sort of technology gives then an edge in college and the
workplace...

>   Although general familiarity with DTP programs may be constructive,
> it does nothing to further the goals commonly associated with an english class.
> Also, for text authoring, it's overkill.

Who the fuck cares what you think? You don't know what their needs are.. So you
criticize a school for accepting a $100,000 gift from a prestigious college to
set up a lab for English and journalism classes that will be use also for
desktop publishing as well as a writing class. And most likely be used by the
school newspaper class.

>
>   Great example petey-boy.

a ferengi specie, good job for contributing to the sorry ass nature of many of the schools.. With people like you why bother improving the schools.?

: for the previous month you would have seen that the flamewar is only a recent
: degeneration of previous, older threads.

I said I'd been  reading here "every now and then" for a month.  Which means
I scanned the group from time to time, reading what interested me, and I
couldn't help noticing that most of the group's contents was Peter-bashing.

: You are trying to make comments on things you admit to knowing nothing
: of.

No.  I'm commenting on your reaction to what I may now little of, namely
Peter's postings, but I need to know nothing about them to judge your
reaction as wrong.

:         What do you think the flamewar degenerated from. If you payed
: attention to the flamewar itself you might have picked that up.

I think I stated before that I was in no mood to pay attention to a flamewar?

: >group full of threads whose names are insults to one specific person, I

:          So, you complain about having valuable time saved by WELL MARKED
: threads?

No, I complain about having a group *full* of flame threads.

:         Don't kid yourself. These threads didn't start years ago. This isn't
: Ent. vs. SD from r.a.s.s. (now rassm).

They certainly started before I started reading this group, and I was told that
this had been going on for years.  It may be that the current threads are
not so old, but your opinions of Mr Sinclair-Day certainly are?

: >I stated that I didn't pay "attention" to your flamewar, yes.  I did *not*
: >state that I didn't care.  If I didn't, I would not comment on the topic.

:       You stated explicitly that you didn't care about the validity of Petey's
: ideas.

Yes, I did.  But I didn't state that I didn't care about the ongoings
in this group, which is what I thought you meant to suggest.

: >I would unsubscribe the group.  I wanted to express the following:
: >Even *if* his postings are shit, and whether they are or not doesn't matter
: >for this argument, the way you react to them is *not* better at all.

:       That's rather superficial. It seems that you cannot be bothered to go
```

: below the very outer surface of an issue...

Why is it superficial to suggest that if someone disobeys Netiquette, it is
not the right way to disobey it yourself in answering?

: >Am I perplexed? Hmmm... I'd say no. I'm just wondering whether what goes
: >on here is the right way to behave in a newsgroup, even *if* it's *.advocacy.

:   Well, if you'd been reading this group for an ENTIRE MONTH, you'd know.
: Browsing the subject headers don't count.

I did more than browsing the headers. There were some threads that did contain
other things than flamewars. These made me feel that the flamewars might be
unappropriate, or at least a little disproportional in their extent. Which
I then stated when the chance had come to do so.

: >I looked into other *.advocacy groups, namely ms-windows.advocacy, and there
: >I could find things like "Macs suck" and "Win95 has thrown back IT for years".
: >Not exactly highly intelligent stuff either, but *lightyears* away from a
: >flamewar like here. So I posted my thoughts about it, in what I regard as

:   ...not reading the POSTS in that group either I see...

Yes, I did! Only that it doesn't matter for the argument here whether I did.
They contained what I'd expect: discussion, and the occasional moron insulting
people for their opinions. Just fine. ;-))

: >a polite manner. No need to attack me, I should think?

:   You are engaging in the same behaivor that got Petey-boy flamed to
: oblivion...

Huh? Being polite got him flamed? *Now* I'm beginning to understand... ;-)

: >Again, I could not "pay attention" because I am a newcomer. But is that a

:   No, you just couldn't be bothered to actually look into the issue
: before making comments from the peanut gallery. Who knows. Petey-boy could be
: suffering a serious injustice but, you'd never know.

Again: I *do* *not* *care* whether or not Peter suffers an injustice from
your repeated, and increasingly substanceless, stating that he is an idiot.
He may be one, and then again he may not be --- I do not know, nor do I care.
I *do* *care* about your abuse of this group in stating that he is an idiot.
A newsgroup is not the place to do so. Got it???

: >reason to treat me unworthy to express my feelings about the ongoing in this
: >group?

:   Then actually attempt to inform yourself. It is not an active group. A
: months worth of posts in here should be worth a day or two in c.o.m.w.a...

I did inform myself about what is and what is not appropriate in newsgroups

postings. I am not informed about who is right or wrong in your battle, but
I am informed about the battle being wrong here.

: >
: >:   You also may have noticed that the 'Slam-subjects' directed at
: > Petey
: >: originated as demands for support and examples for threads he originated.
: >
: >Hmmm... do you mean that you (whoever) created a thread for each argument
: >or opinion of Peter's that you considered wrong? Insulting him as

:   See... you can't even be bothered to pay attention to a post you are
: responding to. Although, considering that the only headers that you've payed
: attention to lately are the pure flames, it's not to unpredicted that you
: actually missed the ones like: Peter can't be bothered to support his own
: argument.

OK, so maybe he can't be... but why did you (whoever) feel the need to create
a new thread for the discussion (or so it seems) of whether one person can't
be bothered to support his own arguments? A followup posting in whatever
thread it occured stating, "Hey, why can't you be bothered..." should suffice?
It's things like that which disturb me here.

:   After some chiding he finally came up with some Mac DTP app I've never
: heard of.

Which goes to prove what?

:   Try paying attention. It helps.

I am in no mood to pay attention to what doesn't interest me. I am in no
mood to have to pay attention to what I feel should not be posted in this
group just to get your kind permission to state that in my humble opinion,
and by the way according to Netiquette, it should not be posted here.

: >:   When rational discourse fails, there is no point in maintaining
: >: civility. It is wasted effort.
: >
: >When non-civility fails either, I believe there is no point in maintaining
: >communication. I believe this is wasted effort then as well.

:   Some of us enjoy the occasional bout of 'pig wrestling'...

OK, do it. But looking at this group (and *no*, not only at the headers)
I don't get you with the "occasional", I'm sorry to say.

: >
: >:   Also, burden of support falls on the one who asserts. (namely
: > Petey)
: >
: >Huh? I don't get you.

:   I don't suppose you would. You have appeared to be pretty clueless as to

: the content of the posts on this group thusfar.

I meant that I had a language problem, sorry. So you meant "it is for Peter to
support his arguments, because he stated them"? OK, fair enough. But again:
why does there need to be a thread stating he doesn't? If he doesn't, how
about a followup stating: This argument went unsupported, so it doesn't count?

: >OK, then could you not agree on leaving the flamewar in one thread, or in as
: >many as the flamed one creates? I get the feeling that Peter only replies to
: >whatever insult you come up with against him. And maybe, once in a while,
: >replies to a post that does not insult him. So the way might be not to insult

:   Of course. It is much less mentally taxing to reply to a post with no
: substantial content.

Which goes to prove that ignoring him might reduce "flame traffic", thus
increasing appropriate traffic if not in absolute numbers, then at least in
percentage. Which is what we should aim for. IMHO.

: >him whenever the opportunity arises, but to discuss matters rationally not
: >with him, but with the other readers of this group, and to keep the flamewar

:   Your attention is lapsing again...

Where? What's the problem in discussing rationally the pros and cons of Atari
computers with persons other than Peter?

: >in one thread. Or maybe to add a "FLAME:" to the subjects of the flame
: >threads.

:   You mean to tell me that having an insult in the subject line is not a
: clue enough that thread is a flamwar. Are you pretending or are you really
: that dense?

OK, that's one point for you here. Sorry. But why do you insult me? :-(

: >I just cannot believe that grown-up persons like you, me, and Peter, can't get
: >along without rendering a whole newsgroup practically useless. There are

:   If you want it to become un-useless then do so. No one is stopping you.

I'm trying, thank you. ;-)

: >other ways of dealing with ones who are a pain in the ass. Ignoring, for
: >exapmle. Or, if that fails, complaining to postmaster@his.site. Or, if

:   a) MOST of his behavior doesn't warrant that
:   b) it's already been tried.

But it does warrant a flamewar, against Netiquette? Odd.

: >that should fail, mailbombing. Or, if that should fail too, killfiling

: Ohyeah... critizise us for indulging in flames and then advocate
: mailbombing. This is not a bright thing to do in the same post that advocates
: tattling to postmasters.

Just my ideas.

: > But I don't want to killfile *everyone* here that contributes
: >to Peter-bashing, because I think someone might add useful thoughts to some

: Then buy a newsreader that can kill based on subject or header...

No help there, I'm using the one at school here. And even if I did,
I'd have to add a new subject to it each time you go and start a new thread
of the "Petey is a chicken" type. Which is exactly what I'm complaining about
here.

: >other discussion here. And, even if you can't believe it, I think Peter
: >might do so too, when given a chance and not brought to rage by insults
: >like yours.

: Well, I do admit that my chides are a bit more effective than the recent
: tendency to fall into the 'dumbass' rut around here...

OK, then please try and keep it that way... :-)

: >
: >I'm no particular fan of Peter, and some of his comments did strike me as
: >stupid, too... I just don't feel that your reaction to them is appropriate.

: To bastardize a quote: I have not yet begun to flame!

Then would you please stay as polite as you are, and not start to flame?
Thank you.

: >What I feel appropriate I stated in my original posting, and above.
: >When you have tried all of this, and it didn't work, then why do you
: >overreact like this? Why do you make people feel that "we need a new

: Pet Peeve: Clueless Pundits.

I beg your pardon?

: >newsgroup", istead of trying not to waste the old one anymore like you
: >apparently did for the last couple of years?

: ...more arrogant presumption...

Have you begun to flame yet? It certainly feels that way.

Yours,
Erik Meltzer

Well, gee, Bob, since I don't feel like searching all of the more-than-a-dozen
groups _you_ posted _this_ in to
try to figure out where you were when you wrote it, I guess you'll have to live
with cross-posted replies, won't
you?

How does that rule go?  It's a Navy thing...  Ah, I recall now:  "Do as I say, not
as I do!"

>What is this ferengi babble, jabba...What a dumbass.  Desktop publishing is
>being used more often in English/Journalism classes.  When students have

      Desktop Publishing is overkill for a composition class.
      Journalism was not addressed in your original example. There, page
      layout and typesetting are remotely relevant to the goals of the course.

>experince with this sort of technology gives then an edge in college and the
>workplace...

       ...sounds more like Microshaft marketing indoctrination. There is no added
utility in using a DTP package to draft a composition. It may be useful for
to fluff up the final  copy but that is all.

       This is where bloat begins.

       People are encouraged to use an M-60 when a pellet gun is really the tool
       for the task.

       This is additional vocational training. It may add utility in general but,
```

it still
adds nothing to the usually stated goals of a composition course.

...and DTP for composition is still overkill.

>
>> Although general familiarity with DTP programs may be constructive,
>> it does nothing to further the goals commonly associated with an english class.
>> Also, for text authoring, it's overkill.
>
>Who the fuck cares what you think? You don't know what their needs are.. So you

You never addressed my point. How is DTP not horrendous overkill for
simple text authoring?

>criticize a school for accepting a $100,000 gift from a prestigious college to
>set up a lab for English and journalism classes that will be use also for

You are indulging your imagination here...

>desktop publishing as well as a writing class. And most likely be used by the
>school newspaper class.

Schools having money to burn is not considered a common condition.
Also, DTP is still overkill for simple text authoring.
Also, composition is quite technology independent.

>
>>
>> Great example petey-boy.
>
>a ferengi specie, good job for contributing to the sorry ass nature of many of

       I have one of each of these within my own city. NONE of them have mac
clones.
       Furthermore, the mac selection they do have is sparse. These are very poor
       examples. The only one worse would be CompUSA.

        It's their licenced product. It's also apparently something necessary for
their

long term survival. If they are not seeing to it (regardless of whether or not it would
normally be their responsiblity) then they are neglecting their best interests and those of the users.
They are doing an Atari (or an Apple depending on your point of view).

Regardless of who's fault it is, an area of the country with ~50 Million people
is not being properly marketed to wrt Mac Clones.

This is a fairly weak counterpoint.
Are the taxes in Iowa so oppressive?

Can't argue with logic, can you? None of the choices you gave above is a good place to buy Apple products. Not one of those places in my area carry Mac clones! Sears and Wal Mart have maybe 1 or 2 Apple models. Best Buy might have 3 on display. And I'm in the Detroit metro area.

You need to come up with much better examples than that. You sound like an Atari Computer advocate of 1990.

>I don't keep track of PowerComputing and Umax distribution system. I know that
>Power is emulating Dell and Gateway of distribution through an 800 number.
>Seems successful. If Mac clones are not available in storefronts in your area,
>how is this Apple's fault.

Apple should be marketing their own products, right? Your logic is "Tramiel-esque". Someone else isn't going to market your product.

>> This also bears too much similarity to the state of Atari in these parts.

>That is utter bullshit.. Power is only two years old and brings in more
>revenue than Atari does.. Power sells direct mainly and also lets the catalog
>mailorders like MacMall, MacZone, MacConnection and MacWarehouse to name a few
>to sell the complete line of their Mac OS computers.

What!? You just proved the point you were saying was bullshit! You are relying on mail-order chains again! Once again, you sound like an Atari computer advocate of 1990.

>>   Mailorder eh? Sounds like the mac advocate has no storefront support
>>   for the machines he advocates.

>Nope..For me it's convenience and saving sales tax.

That's pointless. In this whole argument you have taken the same stance Atari advocates took 6 years ago. And what happened to Atari computers? Let's track the path to oblivion:

1) Diminished retail presence, 2) mail order becomes main alternative, 3) foolhardy marketing approach is defended by advocates, 4) userbase declines, 5) platform collapses only to be supported by enthusiasts and some 3rd parties.

Atari's path sure looks like Apple's right now. And your arguments
are only illustrating it even more. Open your eyes and realize
what is going on here.

/Kevin

The best part is that he flamed a _Mac-owner_. I wonder if he realized
that.

To the original poster: Maybe now you know why we are a bit anxious
about Mac people :-)

Regards,

newsgroups: comp.sys.atari.advocacy

I used to frequent this newsgroup quite often. About two years ago I got fed up with people confusing "advocacy" with "fanatacism", so I left. I just now resubscribed. Doesn't look like things have changed much, unfortunately. While I do admit to seeing a certain amount of maturity that has developed in most of the "regular" posters to this newsgroup, I'm utterly astounded that after almost two years Peter Sinclair _still_ continues his pointless arguing, while at the same time the many self-proclaimed "intelligent, mature" folks continue to taunt and fight with him. I still don't understand why, and I think I'll return this newsgroup to the "unsubscribe" list. Good day. :-)

Yeah, where's Ted Kazynski (I know that's mis-spelt) when you really need him?

However, I do have a similar solution:

mv (From: *sinclap*@*uni.edu*) > (To: root@uni.edu)

I still see his drivel, but now his sysadmin gets to see all of it, too.
Automatically, even if I miss a post.

Hey all you guys, don't waste bandwidth (and forgive me for wasting it too).
Do you honestly believe that the original "8000 pics" article poster gives
a rat's ass about netiquette? If we give it more exposure, that's just what
the poster wants.

I say we just ignore it and go on with our respective newgroup discussions.
If he insists, we can all personally and *privately* volume-spam-mail his
account. A breach of netiquette is ignorable, an insistent b1FfHeaD should
be stopped with his own methods.

My $0.02 ...   MZ

: I used to frequent this newsgroup quite often. About two years ago I got
: fed up with people confusing "advocacy" with "fanatacism", so I left. I
: just now resubscribed. Doesn't look like things have changed much,
: unfortunately. While I do admit to seeing a certain amount of maturity
: that has developed in most of the "regular" posters to this newsgroup, I'm
: utterly astounded that after almost two years Peter Sinclair _still_
: continues his pointless arguing, while at the same time the many
: self-proclaimed "intelligent, mature" folks continue to taunt and fight
: with him. I still don't understand why, and I think I'll return this
: newsgroup to the "unsubscribe" list. Good day. :-)

Come on now! That just is not the spirit!! Fanaticism and advocacy are one and the same. We would hardly need an advocacy group for a bunch of people who didn't really have an interest in their Atari now would we? It is the fanatics who keep these groups going.

L8R...

In article <Kronos-2206960113220001@clavius39.wco.com>, Kronos@wco.com (Todd Reed) wrote:

> As an ex-Atari user who has migrated to the Macintosh platform, I fail to
> understand why so many Atarians in this newsgroup seem hostile to the
> Macintosh.

One other point I failed to make in my earlier post. I wonder if there isn't something in the corporate stance of Apple that doesn't raise the hackles of users of other computer platforms. Something about Apple's 'inherent superiority' or something like that. Apple's PR and advertising all point to Macintosh as easy to use, plug and play, no sweat, fun computing.
Maybe it goes a little too far. I've heard people refer to Macs as 'toys'

and worse. Perhaps the Apple propaganda machine goes a little too far in this respect. After all mastering a Mac isn't all that difficult compared to the problems of using a Windows machine.
I'm probably not making particularly incisive points here, though, the theme seems to be that the media has really taken aim at the 'dying' Apple, perhaps because Apple sets itself apart from the other computer makers in its corporate ideology and public stance. Does this post have anything to do with Atari advocacy? Unfortunately not.

sinclap2954@uni.edu sent me the following flaming email. Since I had already informed him that any further communications from him would be considered public, here's what he wrote, along with my response. I apologize to those of you who would rather not see his crap, and suggest that you move on to the next message now:

 S> I understand that your mother screwed around with another significant
 S> other instead of her husband to have you...Maybe thats why she is in
 S> hell...now...)

I believe I've already mentioned that she's dead, else you wouldn't have made the last remark. Did I also mention that, if you were within physical reach, I would now be forced to remove your heart through your anus by pushing it out with a railroad tie?

You're very tiresome, old fool. Why don't you just go back to mopping the library's bathroom and leave conversation via computer to your betters? You know who I mean: The experimental rats in the biology lab.

Copies posted to sundry advocacy (and other) groups for the illumination of those who thought we were too rough on Petey Boy.

He already stated in our first exchange that you were basically untouchable; that he felt your posts were not abusive, in spite of the obvious infammatory nature of every comment you make in newsgroups where you have no interest EXCEPT to incite flame wars. Thus, I feel no compunctions about stating the obvious. If he is offended - well, gee, his attitude about your activities is offensive to me and to every sysadmin who takes any pride in his system and the general class of the system's public image.

This link:

http://www.3rdplanet.com/~starship/atari.htm

(just now updated for the second time today) will get you the latest version of UUCP-ST as well as NOS-POP3, the full Demon NOS package (unmodified!) and several "helper" packages for getting a TCP/IP setup running on single-TOS.

There are also about 40 links to other Atari Web sites.

Hi All,

Here is the next WAG meeting details :-)

Date: Friday 26th July
Time: 20:00
Place: Whitchurch, Hampshire (Please Netmail or Email for full details)
Theme: 8-Bit Atari demonstration by Brenden O'Neil

Everyone is welcome, not only 8-Bit stuff but ST and Falcon demos as well
:-)

Yours Roy

Have a W.A.G. join Wessex Atari Group

Automatically, even if I miss a post.

Drivel?  When you were a kid, did you constantly cry to your ma ma and da da
when 'drivel' came your way?  You're to easily get all defensive about nothing.

Who needs 32 bit consoles, thats why I love the Jag!
 GREETINGS..

I take exception with respect to your statement on behalf of all finite
state automata! They certainly can learn better than Peter can!

Yes Nt is not unix, there are actually good commercial programmes used
by real people who just want to get the job done without all the
techie bullshit thats why NT is growing and may eventually overcome
the scability probs currently limiting its usage in large sites, Unix
will never die (and it shoudn't either) but NT will just keep
increasing its share of the market..

Get off your high-horse. There are still 30 year old OS'es that
trample your beloved MacOS.

Progress is only a necessity if you are dissatisfied with your current
system. Considering your lust for progress, your mac must be very
unsatisfying...

& btw, the jag is the progress that you adore so much.
Why settle for a measley 32bits?

Atari ST series Computers and Monitors.

Introduced in 1985, the Atari ST series was Atari s answer to Apple s Macintosh. They used Motorola 68000 chips and had a graphic desktop user interface. They couldn t compete with giants like Apple and IBM in the long run however, and eventually became defunct. Modern Atari computers based on their basic design are still on the market today.

Although its 8mhz clock speed and standard 512k might seem outdated by today s computing standards, the Atari ST had at least two very redeeming features. One: standard onboard MIDI ports which are still very fast compared to today s computers. Two: The first really good multi-player interactive game.

MIDImaze was developed in 1987 to take advantage of the ST s fast graphics and MIDI. One hooks up to 16 machines in a daisy-chain MIDI ring and fires them up. Then all the players run around a first-person-perspective maze and shoot each other in real time. It s a little like Doom Deathmatch with more players and less gore, and it remains popular today.

We run MIDImaze for no charge at Con of the North, our local games convention. We plan to take it on the road at some time in the future. To do so we will need more Atari STs.

Absolutely any Atari ST or the later TT or Falcon will work for the game, so we are interested in any and all of them. We would prefer models with RF modulators because they are easier to modify for use with composite color screens, but if your computer does not have one and you have an Atari monitor for it we ll probably want it anyway. Old style 520s with no disk drive and 512k are just fine!

We are willing to pay $30-50 per computer or monitor, and we are also willing to pay shipping. If you live in the Twin Cities Area, we will even come and pick things up. Bonus!!! If you live in the 5 state area (Minnesota, Iowa, Wisconsin, the Dakotas) and donate an ST or two to the cause, we will come to your local games convention and run MIDImaze there!

PLEASE MAIL ALL INQUIRES AND RESPONSES DIRECTLY TO: jabeecher@aol.com.

If you are reading this and have any suggestions where we might post this to better effect, please do not hesitate to tell us.

Thank You for your time!

```

In case anyone is interested, ther have been less than 10 messages in this base since 1 July 1996 that did not involve Peter Sinclair-Day in some way, shape, or form.

Since he's such a wonderful person (and since I will never see his messages again, since my auto-killer is now working), maybe I'll write an auto-spammer that randomly bounces all his spewing into the alt.sex heirarchy...

Naw, even perverts don't deserve that.

NT is cool , but who has 550$can for workstation version? I'll stick with
linux for a while and cross my fingers that VERY smart programmers out there
will make it as easy as Mac.(I do like linux as it is, not my girlfriend...
She wants easy stuff so I have W95 for her:)Then Linux will kick Bill's butt.
However for now It is more like for ISPs then home users.

>>jjs
```

Note that Joe was only pointing-out that Ms-WinNT is not UNIX. He wasn't making any claims about the "natural superiority" of UNIX over Ms-WinNT. That being said...

```
>Yes Nt is not unix, there are actually good commercial programmes used
>by real people who just want to get the job done without all the
>techie bullshit
```

Getting kind of defensive, are we not?

Anyway, are you trying to imply that for UNIX there are no "good

commercial programs used by real people who just want to get the
job done without all the techie bullshit"?

```
>                 thats why NT is growing and may eventually overcome
                                             ^^^^^^^^^^^^^^
                                             ^^^^^^^^^^^^^^
```

Now *that's* confidence, isn't it? :-)

>the scability probs currently limiting its usage in large sites, Unix
>will never die (and it shoudn't either) but NT will just keep
>increasing its share of the market..

I wonder... I wonder what makes folks think that Ms-WinNT is
somehow going to "out-UNIX UNIX" while at the same time remaining
the simple (?), pleasant (?), user-friendly (?), and easy-to-use
(?) animal that all Ms-* lovers have come to know and worship?

And I wonder how many of those touting Ms-WinNT over UNIX have
actually had any degree of experience with any of the modern
UNIXes. (Or *anything* other than Ms-*, for that matter.)

Regards,
Jim "there ain't no such thing as a free lunch" Seymour

x-mailer: Mozilla 3.0b3 (Win95; I; 16bit)

The proposed group would serve as a place to exchange small patches, release small shareware packages and updates to existing packages, post items that have been requested in one of the other comp.sys.atari.* newsgroups, and so forth. There has been some discussion of how to handle Atari binaries since the closing of comp.sys.binaries.atari.moderated and the general consensus in c.s.a.s has been that a dedicated newsgroup is needed; it is inappropriate to post large binaries (>16k) in any of the existing groups, and if this proposal is approved, it will then be possible for those users who do not wish to download binaries to simply not subscribe; at present, someone will post a binary from time to time and users who must pay for on-line time, and who do not want the binary, complain (quite reasonably so).

Comments welcome. Flames to dev/null, thanks.

I believe that a alt.binaries.atari or alt.binaries.atari.st is badly needed since our moderated binary group has lost it's moderator and been expunged!

  Is there a tag for this group? For example:

alt.binaries.atari	Binaries for Atari computers

Also, is there an official charter? The first section at the top is pretty good, how about something like this?

-----8<-----

This group is intended for the posting of binaries for Atari computers. Examples of on topic posts include:

- Compressed files for the Atari of any type
- Patches to existing software for the Atari
- New, publically released software for the Atari
- Atari software requested by someone in another group

Examples of off topic posts include:

- Discussions or advocacy of Atari products
- Auctions or sales of Atari hardware or software
- Commercial software (WaReZ)
- MAKE.MONEY.FAST schemes and ECP/EMP

Again, this group is *NOT* intended for the posting of commercial software. Commercial software may be posted ONLY if the current holder of the copyright has agreed to allow public distribution of this software.

-----8<-----

How's that? Is it agreeable to everyone?

-Kyle R. Hofmann

I'm a little puzzled (not knowing *anything* about the organization of the Atari groups, or indeed of the Atari itself): Rich's posting refers to comp.sys.binaries.atari.moderated, yet that appears to have placed binaries directly into a non-binary hierarchy. Was any such group ever officially in existence (being Big-8, it would have had to pass a RFD/CFV process)? I would have thought the most likely reason for the group to have been, as Tom puts it, "expunged", is that David Lawrence has conducted some Augean stable-cleaning. I can find *no* signs of any comp.sys.binaries.* hierarchy, which is the way that I as a newsmaster would like to see things remain!

According to my active list, there *is* a comp.binaries.atari.st, which is indeed moderated. Was it perhaps this group that you and Rich meant? If so, rather than creating a new group in the alt.* hierarchy (which might take some time to achieve good propagation), why not simply appoint another moderator, and start using the group again?

(I'd wanted to cc this response to Rich as well as Tom, but the latter didn't retain the former's address in the attribution.)

Hopefully it will, thus diminishing the share of Windows 95 to the
limit of nonexistance. That's one positive point about NT indeed:
even the Windoze folks eventually get an operating system.

Something the Mac people are *still* waiting for, BTW. ;-)))

(F'up trimmed)

Yours,
Erik.

[disclaimer-this no post in no way implies any slightest respect for sinflop or
 his arguments in general]

1) MicroCenter - Likely have 'all the choices'
2) Incredible Universe - Probably have 'most' but, not as much as MC
3) Best Buy - mebbe...
4) CompUSA - don't bother

This brings to mind something a friend used to say whenever she
wanted to get cryptic:

"At night, the ice weasels come.
 Who knows what evil dwells in the hearts of men?
 The ice weasel knows."

Hmmm .. Don't forget, the owls have ears and they're listening to the
walls.

Hi,

Kevin Haley (khaley@nova.gmi.edu) wrote:
: I think we need a comp.sys.atari.bash.that.whipping.boy.peter.sinclair-day.
Yeah, after you all ruined this one ... ;-)

One thing: Kevin, I do *not* mean you personally, or even you at all, when
I write "you" below. I do not mean to insult or hurt *anyone* here, I
just wish to express my feelings about this newsgroup. Maybe it's time
for an outsider like me to put things in perspective...

: The rest of the Atari groups should become moderated so we can leave the
: others in peace and use this group to bash our favorite whipping boy.
Why don't you do that via email? See below.

: Can't say that I mind all this flamage. It's really funny to see everyone
: flogging the whipping boy! Boy, what a doofus! He looks dumber and
: dumber with every post! If he had an ounce of brain he might be

: dangerous.
Oh well... some of what I've seen replied to Pete's messages didn't quite impress me as being all too intelligent either, let alone the titles of most of the threads here. And yes, I *do* mind. comp.os.ms-windows. advocacy is a more civilized place than this. :-(((

: If you haven't done so, flame PeePee! Trust me, getting frustration out
: like this feels good! And he's such an easy target.
Yeah... but just one question: What the hell is everyone so frustrated about that they need to have a flamewar? I thought Atari users aren't frustrated. Or do you all have Windozes or Macs at work?

: The real victims in all this are the people who want to have real
: discussion on Atari topics. Instead, they have to deal with all of
: this shit. My apologies to them.
Do you *have to*? I think you *want to*. I've been reading this group every now and then for about a month now, secretly hoping that it might be more to it than never-ending insults, flamewars and calling people names that I think I last used in pre-school, but until now I was disappointed.
I cannot say whether Pete's arguments were or weren't good, and I must say that I don't care either... what I want to say is this:
Assuming that you are right, and Pete's opinions and arguments are completely and utterly shit -- then what better are you all creating threads with the insults right in the subject? I'd think THAT'S completely and utterly shit as well. OK, maybe he is of a different opinion than you, and OK maybe his arguments are nonsense and objectively wrong (I don't say they are, I say they may be), but reactions like yours are *not* the way to deal with such. You might give proof to what is wrong with them, or failing that you might give reason what you think is wrong with them.
But if you start insulting, the thought appears that you don't have any arguments to put against his either.

: And no, ignoring Sincrap doesn't make him go away. We've tried that
: before. He's been a fungus on these groups for almost 2 1/2 years now.
Hmm... well, I can't really say, but if that is so, then why didn't you try to patiently send an *email* to him in which you state why he is a fungus *each time* he was one? Simply posting a followup saying "you're a piece of shit, go away" doesn't exactly serve the purpose of driving someone away, you know. Everyone, when attacked in public, will try and correct the public's image of himself. And voila: you have the next round in this never-ending battle. :-(

Again, nothing against you personally, Kevin!

Greetings,
Erik

(Erik Meltzer at b.i.b. Hannover, Germany)

Well, I think I've finally figured it all out...Be patient and follow my logic here for a moment...

Peter Sinclair-Day (sp?) is not a real person...its a new virus that only inhabits newsgroups. Think about it for a moment...

1) Virus's are usually replicating: No doubt about that-Sinclair posts are seen worldwide on almost every advocacy group there is. (esp Amiga and Atari advocacy)
2) After the first initial surprize effects, viruses are predictable; they follow their programming: At first Sinclair posts are a bit of a shock, but if you follow them carefully, you will notice a certain "sameness" about them...Responses tend to follow a set formula...something along the lines of instigation, inflammation, accusation, and of course, a lot of irritation...
3) Viruses don't react well to new situations or scenarios: Whenever a counter post demands proof, logic, an explanation, etc,...Sinclair inevitably "stalls", procrastinates, or just plain ignores the post. This is a sure sign of a database that is limited in its responses. Its kinda like the parser in some of the old text games-due to size limitations the programmers could only put in limited responses to player input...whenever something was encountered by the parser that wasn't in the response database- "stock" answer(s) would be given out whether they made sense or not...

As you can see, Sinclair fits these definitions and parameters perfectly. So folks, we need us a sure-fire newsgroup virus-killing program. Any suggestions?

     <of course this is all in jest but its amazing how *right* it feels!>

Midnight Escape's 1st 8,000+ file CELEBRITY/Misc Model ADULT CDROM
(BIGGEST & BEST affordable stars/model CD-ROM you will find! Guaranteed!)

-=-Web orders: www.mid-night.com (Check, Credit Cards, First Virtual)-=-
** For phone orders (USA number) 804-686-1271
Order via BBS 804-686-3062 (email: cds@mid-night.com)
$24 each (plus $2 shipping, $5 shipping outside USA)

Just a FEW of the ME#1 CD-ROM's features are:

- 460+ pics of Cindy Crawford ** FOREIGN ORDERS: **
- 200+ pics of Elle Macpherson --WELCOME--
- 200+ pics of Alicia Silverstone
- 200+ pics of Mariah Carey
- 200+ pics of Christina Applegate (Kelly Bundy) **NUDES**
- 200+ pics of Sandra Bullock
- 100+ pics of PAMELA ANDERSON aka Pamela Lee!!
- 100+ pics of Patricia Ford (sexy hot famous model)
- 50+ pics of Elizabeth Berkley (Showgirls star)
- 50+ pics of Christie Turlington (hot supermodel)
- 50+ pics of Jenny McCarthy (singled out host, playmate)
- 70+ pics of Singer Paula Abdul
- 60+ pics of Alyssa Milano, nude and clothed..!
- 40+ pics of Sarah aka Jennifer Love Hewitt **BBS READY**
- 40+ pics of Jennifer Aniston from FRIENDS
- 80+ pics of Racquel Darrian / Kelly Jackson (porn star)
- 80+ pics of Anna Nicole Smith
- 150+ pics of Adult Japanamation/Erotic Artwork
- 2000+ pics of other nude stars (too many to list!)
- 2000+ pics of clothed MISC (swimsuit etc) stars
- 1500+ pics of hot AMATEUR models, nude..

(MORE details on content at http://www.mid-night.com/cds.htm)
or call 804-686-1271 to order via phone.

Common info:

- Packed in white shipper, No signs of nudity (Wife protection plan)
- All in all, there are over 8,000 thats EIGHT THOUSAND FILES!
- All pics are high quality atleast 640x480!
- Directories are arranged in NUDE/NON NUDE ordering for easy use!
- MPEG Animations of Stars (Applegate, Salma Hayek etc..)
- Graphics viewing software for Windows/DOS
- CD is BBS ready with detailed descriptions of all files!
- This CD will save you -ALOT- of download/searching TIME!
- Too many more features to list in this message..

This CD represents alot of hard work. Here is the pricing:
$24 each (plus $2 shipping, $5 shipping outside USA)

*For FAST results, visit http://www.mid-night.com/cds.htm
And fill out a order there. We take every method of payment.

*Or call 804-686-1271 to order via credit card over the phone!

*If you dont have access to the World Wide Web and would like an ORDER FORM
sent to you via email, reply to this message at cds@mid-night.com
If you have any questions feel free to email also..

*If you dont trust the internet for ordering, you may logon
Midnight Escape BBS at 804-686-3062 hit C at the new user menu
to order the CD..

Qualifications: You must be OVER 18 & live somewhere on planet EARTH!
NOTICE: Foreign orders add $5 for shipping..

*Wholesale/Dealer/Bulk information/prices available upon request.

Apple computer announced a write-off/loss of 1/3 of its net worth in the
most recently-reported period, but they're not in trouble.

Besides, Peter says, we always have Mac clone makers if Apple goes kaput.
Hmmm... who will develop the OS?

I'd imagine too that it's quite embarrassing for Peter to realize that there
are more TOS clone makers than Mac clone makers, and that development of the
OS has continued, and will continue long past the death of the Atari name.
TOS has become (via MagiC) the first viable, affordable, multiplatform OS -
long before PPCP/Copflop hit the streets.

Apple's legacy shall be to be remembered as the company who stayed afloat by
selling overpriced hardware to government buerocrats like Sinclap, who didn't
need justification for $10K+ expenditures.

     France's 'hero' is Joan of Arc. Marie was just another aristocrat that
got the chop during the revolution.

     Nevermind that I never said one thing bad about Marie beyond what gets
past off as history.

We've already argued with him in the past. He's been on the groups for 2
1/2 years now. When he first came on, he spewed his usual crap and
people tried to reason with him. Slowly, we discovered that any
attempts of rational discussion with him is pretty much a lost cause.
Now, people just bash him whenever he spews. Maybe it's just to
relieve frustration. :-) Personally, once I get thoroughly tired of
this I'll throw him back into my killfile.

For Christ sakes, Peter!  Apple has been in decline since Steve Jobs
left the company.  People were saying the same thing when John Scully
came on board.  Apple is in trouble.  The current leadership is NOT
a guarantee that Apple will be around "past our lifetime".  It's
marketshare continues to wither away.

BTW, Peter, my Uncle at EDS just told me that their graphics departments
are going 100% PC.  Yes, Peter, EDS is going to drop most of their Macs.
Another big blow, and no doubt you'll come up with some sorry-ass
denial for it.

>MacMall chain has Power and Supermac/Umax..

This is all you can come up with!?  Pathetic, completely pathetic.  You
didn't even refute his argument, in fact, you SUPPORTED it even more
by coming up with this lame example.  You are hopeless!!!

We could probably even come up with a simple program to explain the
Pinhead virus. I submit some pseudocode:

```
Pinhead.Sinclair-Day.Virus (any calling parameters?)

   if is_woman(original_poster)
   then
       attempt_really_lame_pick-up_line
   else

   x = random number (1 to 5)
   case x of:

    1: post(quote_whole_article, add("Dumbass") )
    2: post(quote_whole_article, add("So you have a weasel?") )
    3: post(quote_whole_article, add("You are batting -1000..") )
    4: post(quote_whole_article, add("And you?") )
    5: post(quote_whole_article, add("MacMall chain carries Apple..") )

    Add more for complete number of his possible responses

    end case

end
```

It doesn't take much to describe all of Peter's logic, does it?

/Kevin

You quote my entire article and *I'm* the dumbass. Who
puts on your clothes in the morning? Do you still live with your
mom?

> Atari doesn't give a rats ass to their shareholders dumbass.

Like you know something about stocks.

> Pervert and pornograpfer...

And you're not? Mr. Internet Tax and Spend, Pepsi drinking
Democrap. ;-) Actually, I'm a regestered Democrap, but I have a
brain, and I vote Republician! 8-) Are you getting red in the face
now little Peter?

Can anyone advise? Atari is still the best for music (so I'm told).
A) Does 4 meg add to its MUSICAL capability?
B) What are the top software packages you might still be able to get
hold of?
C) What would your shopping list look like if you were starting from
scratch and were only interested in the music? (Mono screen fine.)
Any help appreciated.
Stuart

Hi Brian,

Brian-Roland Miller (brimiller@delphi.com) wrote:

: I'd imagine too that it's quite embarrassing for Peter to realize that there
: are more TOS clone makers than Mac clone makers, and that development of the
: OS has continued, and will continue long past the death of the Atari name.
: TOS has become (via MagiC) the first viable, affordable, multiplatform OS -
: long before PPCP/Copflop hit the streets.
: ---
Well, the term *multiplatform* sounds a bit exaggerated to me. OK, the MagiC
OS is being emulated by Macs well enough, granted. But that's because the
Mac uses the same CPU, only faster ones because of the MacOS's slowliness,
and the PowerMac is (and needs to be) well-equipped to emulate a Mac.
Lucky thing for Atarians in search of a new platform. Imagine we'd have
to make do with PCs -- MagiCPC reaches ST speed on a P75.

Now, don't you agree Macs are *beautiful*??? ;-)

BTW, is anyone porting MagiC(Mac) to the BeBox or planning to do so?
I saw one last week, and I saw a possible new home for all Atarians
instead of slow, dumb Macs and slower, dumber PCs :-)))

: Apple's legacy shall be to be remembered as the company who stayed afloat by
: selling overpriced hardware to government buerocrats like Sinclap, who didn't
: need justification for $10K+ expenditures.
: ---
Ouch! Why do you all have to be beating him??? Above sentence wouldn't
have lost a bit of information without the words "like Sinclap", but then
it would have been less likely to start another flame war thread.

Yours,
Erik Meltzer

True, perhaps, but this am Atari country, son. And you don't have no horns... ;-) Which is to say, we have the right to be fanatical about Atari gear here, and also to flame, to the Sun and back, anyone who does not bow to the mighty Fuji. Well, perhaps I'm not that bad, but the detractors make it sooo easy to outright love my Atari gear. Heck, why not!

> Put away this flame war. It is getting lame. It is like two men on the Titanic debating over the color of the paint in the hallway.

I thought that was the Posidon [sp?] Adventure. Besides, I'm making an effort to do follow-ups to comp.sys.atari.advocacy, so you need not get your panties in a bunch. Better yet, kill file me and Peturd, and you'll not have to waste your time with our flame-fest. But you'll be missing out on some superior flaming, and Peter is just damn funny to interact with. It's like squirting a mad dog through a chain-link fence. Lots of snarling and barking, and fleas, but *we're* the ones having a good time of it. I say, enjoy Peter while he lasts...

Regards,

I took a look, and I'm scared, *REAL* scared. What's the stock at these day? I'm too afraid to look. That money is *GONE*, pally.

The secret word for this week is... "dumbass" write it down. Or if you're Peter, rite it down..

> MacMall chain has Power and Supermac/Umax..

MacMall? Who the hell is that? I think they're a catalog, aren't they? You should buy from MacWarehouse, they have better looking waitresses.

> GREETINGS..

Greetings, and salutations, Mr. Dumbass. What a dumbass. Are you a dumbass much? Is dumbass your favorite word now? I'm thinking, since U wurk in a libararary, that you may have noticed a thing call a dictionary. It has more words in it for you to use. And when you're up to speed you can try a thing called a thesaurus. [sp?] That has words you can use when you have used the same word over and over, and you're begining to look like, well, a dumbass, dumbass.

How's that, dumbass? I used dumbass eight times in my reply...
how many can you do Peter? ;-) Oh wait, that was nine.

Well, I'm to blame for the subject lines, and I'll take full
credit for them, as I love to change them, for entertainment and a
Peter reaction. However, if you have a better idea on where I can
follow-up Peter ridiculous posts, please let me know?

> Yeah... but just one question: What the hell is everyone so frustrated about
> that they need to have a flamewar? I thought Atari users aren't frustrated.
> Or do you all have Windozes or Macs at work?

No frustration. We don't like Peter in the regular Atari videogame realated newsgroup, so we chase him over to here. He fails to provide facts to back up his claims and, as Kevin says, he's been here for 2 1/2 year doing the same thing. You can ignore him, or confront him. I choose the latter. If it frustrates you to read our insulting replies, again, tell us where to go, or kill file the lot. There will be no real discussion. Hence I, and others, chase him here.

> Do you *have to*? I think you *want to*. I've been reading this group

I think they are. Again, kill file it.

> You might give proof to what is wrong with them, or
> failing that you might give reason what you think is wrong with them.
> But if you start insulting, the thought appears that you don't have any
> arguments to put against his either.

It's been done, repeatedly. It does not work. This won't either, but I'm having fun doing it, and if you are not a fan of it then I *URGE* you to not pay attention to it, and kill file it.

> Hmm... well, I can't really say, but if that is so, then why didn't you

> round in this never-ending battle. :-(

No, that's called Usenet Entertainment(TM). If you're not a fan, go kill file it. And as for email, Peter himself lost an account for "emailing" someone 400 times. Please, if you're not up on the history of this, stay out of it.

> Greetings,

Mac Mall is a retail chain in Southern California.  You stated that these
clones were not sold at retail stores.  i pointed out otherwise.

So where are these TOS clones? How come I can't find a full color double spread add? Why are these clone firms selling yeasterdays technology? Why do these new yesterday clones cost more than the $1899 PowerComputings PPC 604-120mhz PowerCenter with a cpu daughterboard?

>insults right in the subject? I'd think THAT'S completely and utterly

Well, you've already yourself admitted that you haven't been paying attention, don't care and that you aren't familiar with the content or nature of Petey's posts.

If you payed better attention you might no be so 'perplexed'.

You also may have noticed that the 'Slam-subjects' directed at Petey originated as demands for support and examples for threads he originated.

>shit as well. OK, maybe he is of a different opinion than you, and OK
>maybe his arguments are nonsense and objectively wrong (I don't say they
>are, I say they may be), but reactions like yours are *not* the way to
>deal with such. You might give proof to what is wrong with them, or

When rational discourse fails, there is no point in maintaining civility. It is wasted effort.

Also, burden of support falls on the one who asserts. (namely Petey)

>failing that you might give reason what you think is wrong with them.
>But if you start insulting, the thought appears that you don't have any
>arguments to put against his either.

See, there you go not paying attention again. Rational discourse has faded on all sides. It's now a flamewar proper. There are no 'arguments' any more. Catch up already...

Whoever,

Why is this posted here in 'comp.sys.hp.hpux'? Please restrict your postings to the appropriate groups. I know of many women who work with HP-UX - they are an important and valued part of our community. This posting may offend them. It offends me.

Furthermore, this is advertising. Once again, this is not welcomed here.

Probably a system crash.  I assume he is like many MacLosers in being
totally clueless as to the real inner workings of his computer...  After
he wastes $200 at an authorized Apple service center for some dope to
tighten a screw he'll be back with us...

Note Mac people, I said many, not all....which in my experience is 100%
true.

Did ya learn a new word in school today, Peter?? Did the teacher write "dumbass" in big blue letters on the chalkboard for you and the other kdis in the SpecialEd class?? You've been using it quite alot the last few days...you must be so pleased to be expanding your vocabulary. Maybe one day teacher will teach you how to quote a message without quoting irrelevant information and how to cut down your corn-fed liberal puking macloser sig. But until then go back to naptime. Who is running that liberal sham mailing list?? It can't be you as you're not nearly bright enough to engineer something like that. Go shuck some corn, fuckchop.

Hi Bruce,

Bruce Haire (haire@engr.sgi.com) wrote:
: [Erik, that's me, wrote:]
: > Oh well... some of what I've seen replied to Pete's messages didn't quite
: > impress me as being all too intelligent either, let alone the titles of
: > most of the threads here. And yes, I *do* mind. comp.os.ms-windows.
: > advocacy is a more civilized place than this. :-(((

:   Well, I'm to blame for the subject lines, and I'll take full
: credit for them, as I love to change them, for entertainment and a
: Peter reaction. However, if you have a better idea on where I can
: follow-up Peter ridiculous posts, please let me know?

Hmm... in the de.* hierarchy, we have a de.alt.flame group for precisely
these purposes, certainly there is something like that outside de.* too?

: > Yeah... but just one question: What the hell is everyone so frustrated about
: > that they need to have a flamewar? I thought Atari users aren't frustrated.
: > Or do you all have Windozes or Macs at work?

:   No frustration. We don't like Peter in the regular Atari
: videogame realated newsgroup, so we chase him over to here. He
: fails to provide facts to back up his claims and, as Kevin says,
: he's been here for 2 1/2 year doing the same thing. You can ignore
: him, or confront him. I choose the latter. If it frustrates you
: to read our insulting replies, again, tell us where to go, or kill
: file the lot. There will be no real discussion. Hence I, and others,
: chase him here.

How can I killfile with tin on HP-UX? No-one here seems to know...

: > but reactions like yours are *not* the way to
: > deal with such.

:   I think they are. Again, kill file it.

Well, I think they might well be in some *.flame newsgroup, but I do not
feel that way at all in an *.advocacy group (except maybe comp.petey.advocacy)
;-)))

: > You might give proof to what is wrong with them, or
: > failing that you might give reason what you think is wrong with them.
: > But if you start insulting, the thought appears that you don't have any
: > arguments to put against his either.

:   It's been done, repeatedly. It does not work. This won't
: either, but I'm having fun doing it, and if you are not a fan of it
: then I *URGE* you to not pay attention to it, and kill file it.

Hey, don't be offended. I'm no one to tell you what you should do.
If most of the folks here feel that it's not the group for Atari attacking
and defending, but for Mr Sinclair-Day bashing, then tell me, everyone,
and I'll go away. But if there are more like me who are unnerved by
the hassle, maybe the right way to go would be transferring the Peter
discussions to another group, or maybe keeping them to one thread in
this group.

: > Hmm... well, I can't really say, but if that is so, then why didn't you
: > try to patiently send an *email* to him in which you state why he is a
: > fungus *each time* he was one? Simply posting a followup saying "you're
: > a piece of shit, go away" doesn't exactly serve the purpose of driving
: > someone away, you know. Everyone, when attacked in public, will try and
: > correct the public's image of himself. And voila: you have the next
: > round in this never-ending battle. :-(

:   No, that's called Usenet Entertainment(TM). If you're not a
: fan, go kill file it. And as for email, Peter himself lost an
: account for "emailing" someone 400 times. Please, if you're not up
: on the history of this, stay out of it.

I said in the beginning I'm an outsider and wanted to put things in
perspective. Could you please keep this discussion to one thread
so that in the others there can be an Atari vs. anything discussion?
That would be great enough...

: > Greetings,

:   Greetings?! I don't like to sound of that.

I'm sorry, what's so bad about that? I'm from Germany, I don't know
the "sound" it might have to you. I didn't mean anything in particular

by that. If it sounded wrong in any way, I wish to apologize.

Yours,
Erik Meltzer

Bwahahahahahahaha!!!!! You are such an idiot, you defy description. Please continue with why Pepsi is so bad, yet John Scully made them what they are today? Are there too many facts for you to handle yet?

> > rest in peace, Ella.
>
> You're underage lover?

You seem to know alot about sex with underaged folks. Is there something you're not telling us? BTW it's the Democratic Catholic priests who are the real enemy's, Peter. Is *that* too much to think about? If you don't know who Ella is, you may not be an actual earth derived human. Are you a rodent of some sort?

I want my free cheese, Peter! I know your hiding it in the trash can you use when you clean the library at night...

You're ma ma..)

And what do *you* know about those things? Let me answer for you... "nothing"

> What don't you understand....

How you can post without facts, as well as claim Apple is in a better position that Atari. Apple == Atari. ;-)

Hi Erik,

Yes, I agree with your feelings about the current state of this group. I was hoping that this would be the correct place to continue to flame Peter for his illogical need to support Apple in an Atari group. [Funny, Apple and Atari are in the same boat.] Anyway, I have no idea how you can use kill files in TIN on HP/UX, having only a small amount of expirence with that OS. You might want to check out the Help screen to see if it mentions automatic message filtering or "kill" procedures. If you were running RN, that would be another story. ;-) Also, we do indeed have lots of *.flame groups, but the main reason that Peter responds is due to the fact that the word "Atari" appears in the name of the group. He would not follow us down to the flame groups for very long. He needs Atari to fuel his "fire", if you will. Sorry if this is detracting to the group's charter, but it does seem like the best place for it.

> :   Greetings?! I don't like to sound of that.
>
> I'm sorry, what's so bad about that? I'm from Germany, I don't know
> the "sound" it might have to you. I didn't mean anything in particular
> by that.

My mistake... that is the sign-off that Peter himself has been using, and I thought you may have been referencing it. ;-) It gave me reason to "take a second look". Don't mind me, I'm more into the meta-workings of most of the groups I read.

Regards,

-Bruce

Strange that you can't manage to come up with an example that services
your own region (Iowa presumably). Not all of us live in Southern
California.
For the rest of the country that example is meaningless.

Apple sells products dumbass in the tune of over $2billion per quarter. What part do you not understand?

Apple Computer
Press Release
June 17, 1996

New Dataquest Study Confirms Apple is No. 1 Worldwide Multimedia PC Vendor for Second Year in a Row

---

CUPERTINO, California--June 17, 1996--A recent study by market researcher Dataquest names Apple Computer, Inc. the No. 1 vendor of complete multimedia PC desktop systems worldwide for the second year running, with 18.8 percent of the market. The 1995 worldwide complete multimedia PC desktop systems shipments were estimated at an astounding 20.9 million units, slightly more than double the 10.4 million units shipped in 1994.

Under the leadership of Dr. Gilbert F. Amelio, Apple's new corporate strategy positions the company in front of the industry's key "mega-trends": convergence of computers, communications and consumer electronics; explosive growth in Internet use; and the demand for media-rich digital content. Apple's proven leadership in multimedia positions the company well for the future and Apple intends to provide Macintosh and Mac OS-compatible users with the tools they need to exploit these trends.

Apple expects to extend this leadership on the desktop to the Internet with our robust interactive media technologies such as QuickTime. QuickTime is Apple's de facto multiplatform industry standard architecture used by multimedia software tools vendors, content creators and production professionals to store, edit and play synchronized video, sound, graphics, text and music through a wide range of media, including CD-ROM and the Internet.

"Apple is committed to continuing to enrich the multimedia experience. We will continue to innovate and capture the hearts and minds of our customers and multimedia developers alike," commented Satjiv S. Chahil, senior vice president of Corporate Marketing for Apple. "We're excited about the year ahead: watch for initiatives from Apple that directly and positively impact multimedia developers, consumers and retailers."

The regions outside of North America had the majority of shipments of complete multimedia PC desktop systems for the first time ever in 1995, accounting for 52.4 percent of worldwide shipments, up from 30.9 percent in 1994. These regions include Europe, Japan and Asia/Pacific. The Rest of World regional designation grew a dramatic three-fold from 1.8 percent in 1994 to 6.6 percent in 1995.

"Throughout the world the use of multimedia capable PCs is exploding, double the number of shipments in 1995 from the previous year," said Bruce Ryon, Dataquest's director of multimedia research. "Apple Computer shipped nearly 4 million of those systems, reinforcing Apple's continued leadership in delivering multimedia solutions to the broadest range of customers."

New Dataquest Study Confirms Apple is No. 1 Worldwide Multimedia PC V (p4 of 7)

Apple Computer, Inc., a recognized innovator in the information industry and leader in multimedia technologies, creates powerful solutions based on easy-to-use personal computers, servers, peripherals, software, personal digital assistants and Internet content. Headquartered in Cupertino, California, Apple develops, manufactures, licenses and markets solutions, products, technologies and services for business, education, consumer, entertainment, scientific and engineering and government customers in more than 140 countries.

:> Really? Then why when I asked you to comment on Apple's problems
:> a couple posts back did you reply "They're news to me"? Apparently,
:> not only are you a hypocrite, but a *liar* as well.

:You stated that Apple is screwing up and I stated that is news to me. In what
:way has the new team screwed up?

Peter, Peter, Peter...

I said "I heard that Apple wasn't doing very well" meaning that I had heard that Apple THE COMPANY wasn't doing very well, not that the new Apple MANAGEMENT wasn't doing very well. And by "not doing very well" I meant...wait, do I *really* have to explain what it means for a company not to do very well?? I don't think that I should have to explain that to a college graduate, so I won't. Of course, whether or not you are actually a college graduate is open to question since you apparently don't even know HOW TO READ!!

So when will you get around to explaining how my r.m.misc posts made me look like a fool? I'm waiting...

* Tom

He was skeptical that there was no front store had the clone and I stated
otherwise.  I will not list all I know...As for your remark, I don't give a
shit if none is near you jabba..

I am sure that there are other retailers that would carry the Supermac S900.
Why not give UMAX a call and ask for the nearest retailer...... As for me its
the catalog/mailorder way..

 GREETINGS..

I win, I win!!!! 8-) Nah-nah, I got Peter to reply with an actual crApple press release, the bigest, and most informative post of his life! And *I* made him do it! Now roll over, Peter. Sit. Beg. Good boy! ;-)

PETER SINCLAIR-DAY wrote:

> Apple sells products dumbass in the tune of over $2billion per quarter. What
> part do you not understand?

That should be; Apple sells dumbass products.

[crApple PR deleted, in which the $2 billion was never mentioned]

> I remember that quote and used it proudly. Minter is such a dumbass when i
> told him that his days at Atari were numbered because the Jag flopped the day
> it reached the market..

You are a *real* psy-kick fee-non-min-numb thar, Peter! Are you predicting that Windows9X will be the standard OS for the next ten years? You should, 'cus that's where we're *all" going. Even crApple made a DOS Mac, true it was a sad little thing that could barely run Windows, but DOS/Win/Intel are in your future. I have predicted it!

As far as the Great Jeff Minter goes. Well, he creates products by writing *great* software. He is a contributor to the industry. You, on the other hand (pun intended), are just some loser-user. Unable to create, so you just play the critic. You have *no* skills.

Where's my cheese, Mr. Hip-Democrate man?!

Oh wait... before I go...

Here's the list of words that will replace "dumbass" in the next few weeks. BTW, Peter stole (uncreative) the word from Beavis and Butthead...

dumbass [already overused, but that does not bother Mr. Uncreative]
dillhole
butt burgler
butt munch
asswipe
semprini

Thanks, come again!

No, I was using Word on a LCIII. The LCIII uses a 32 bit bus and has a 25mhz
68030. Kind of tolerable.

What does the jag have to do with Macs?  From what I read, Wall ST may have
liked the Jag but did question Atari's ability to make the Jag a success.
Apple's current situation is to change their business model to make money not
from a lack of demand of the Mac.  Apple sells over $2 billion per quarter...

> 68030.  Kind of tolerable.

     Yes.  epecially if you like small underpowered boxes without
any room for expansion.
```

I dislike certain types of posts as much as some others. They make it very difficult to enjoy the Atari usenet newgroups. One poster's insipidy can quickly depress this helpful and lively group.

The worrisome part of this business is the use of *violent profanity* when discussing childrens educational issues. How does one respond to violent, profane verbal bashing? On the 'net (assuming no one wants their freedom of speech curtailed) the best method is to completely ignore the poster. This is hard to do. Even discussing the poster's actions may only excite him or her the more.

If the issue is improving the lives of children through technology, then we should, at the very least, make the computer help sections of the 'net a fairly safe area for the kids. (Assuming they may want a say in their destiny!)

And, so what if Gary Kildale used the "office analogy" to make GEM so easy to use and it was such a failure in the IBM compatible world and such a hit (with TOS) in the Atari world. And, so what if the Mac mouse only has one button and you have to keep your finger on it when trying to decide just exactly what you want to select from the menu . And, so what if Windows.xx still uses the "tree" directory approach to file management and most people still don't understand it. And, what is Oracle and why do I want to know? Is it really the future. (Didn't want you to think I was limited here.)

Confused in the USA.........

Any relation to the man behind the ubiquitous Utilities program?

John Norton wrote:

> How does one respond to violent, profane verbal bashing? On the 'net (assuming no one wants their freedom of speech curtailed) the best method is to completely ignore the poster. This is hard to do. Even discussing the poster's actions may only excite him or her the more.

You don't. Once people start using foul language, facts and understanding go out the door. Best to ignore it, or kill file it, if you have the option. It is hard to do at first, but with tollerance comes knowledge that no matter what you try, you can't change someone's mind for them. Confrontation is best left to those who enjoy such behaviour.

> If the issue is improving the lives of children through technology, then we should, at the very least, make the computer help sections of the 'net a fairly safe area for the kids. (Assuming they may want a say in their destiny!)

Is c.s.a.a a "help" section? I thought it was for advocacy and anti-advocacy of the topic systems and related issues. The net is just like any other place in our world. It may be dangerous in some places, and pleasent in others. It is up to the *parents* to decide for their offspring where to go, and where not to go. If you mean "safety" from observing "bad" words... I have news for you. No one can protect their kids from that. It happens at their schools, in the playground, and anywhere where young minds play. To say that we must "clean up the net" to "protect the children" is wrong. Let the parents buy "safe" software to clean up their own screens. I refuse to live in a child-centered world. If you disagree, then I will use bad words against you. It's just words. Nothing more. The Internet is not Disney Land, thankfully.

> And, what is Oracle and why do I want to know? Is it really the future.

Well, from watching Triumph Of The Nerds on PBS, it looks to be something I've always wanted. Full high-speed Internet access from home (no more wimpy 28.8k) without the need to go down to the local computer store to buy some bits on a disk in a cardboard box. Instant OS and App updates via the net. *That* is the future. I hope. ;-) I thought I would have to plunk down and finally get a PC. If Larry Ellison turns out to be correct, I can still hate the PC, and get decent access to info, from home, without feeding Bill Gates' wealth machine. I'm keeping my eye on Oracle...

These are my opinions. Thank you for reading them. Feel free to add your own. It's fun! ;-)

Regards,

```

Emacs could serve the same purpose as well as any other cut/paste
capable text editor on a plethora of platforms.

As a K12 app, it is rather weak. The application is so generic and
trivial
wrt to processor power as to make the extra expenditure on newer hardware
quite wastefull.

Actually, I was implying that noone was near YOU. If you had half a brain,
some education, & the ability to pay attention you may have noticed that.

Cali. is nowhere near YOU are.

I, however am driving distance away from 7+ metro cities with populations
exceeding 1 million. If there are no Mac clones available in these parts, there
are quite a few people being left out of Apple's marketing plans. Although
this is not altogether unusual [for apple].

This also bears too much similarity to the state of Atari in these parts.
>
>I am sure that there are other retailers that would carry the Supermac S900.

Mailorder eh? Sounds like the mac advocate has no storefront support
for the machines he advocates.

Petey-boy should be glad that his graduate advisor is not around to see
his [petey's] stupidity.

>What does the jag have to do with Macs? From what I read, Wall ST may have

Assertion: Wall ST acceptance implies a company is viable

Fact: Wall ST approved of Atari immediately after the release of the Jaguar.

Point: Fact contradicts assertion.

Conclusion: Assertion not universally true.

Implication: Assertion may not be true for Apple.

>liked the Jag but did question Atari's ability to make the Jag a success.
>Apple's current situation is to change their business model to make money not
>from a lack of demand of the Mac. Apple sells over $2 billion per quarter...

Atari had it's name and past success as well as quite a bit of lead time.
Yet they did not take advantage of them.
Apple is no less capable of making stupid mistakes. Their current crisis
is an indication of this. New idiots at the top are no guarantee that Apple's
'situation' will improve.

Until their is new evidence to base a conclusion on, we can only use what
is present.

What is present is far from promising.

:>Not that I'm surprised. But I did think that at this point
:>he might have figured out that there is more to life than
:>Atari bashing.

:Nah, that would require the existence of brain cells in Sinclap's head.
:But his feeble brain farts show us that all he's got up there is hot air.

Very true.

:I've noticed that he now accounts for almost half the traffic on this group.
:What a no-lifer. At least he has provided us with a mascot.

I've noticed this also. This group should be renamed c.s.sinclap to reflect his dominance of its traffic.

:>I wonder how he's taking the impending collapse of Apple?

:Denial. He's an Appleflop owner in denial. Maybe that's why he loves
:to be on the Atari groups; misery loves company.

He's in denial all right. About the only responses he has for "Apple is in trouble" posts are "You have no evidence of that" and "You didn't get it from a reliable source" -- as if he could back up anything that he has ever said about Atari. Or at least that was the case the last time I read this group three months ago. I guess he still doesn't have the balls to admit to himself that the Sacred Computer Company is gradually going the way of Commodore.

I can't wait to see what he does when Apple dies! More likely than not he will commit suicide since Apple is the only thing that he lives for.

Peter, if you are reading this can you give me your personal assessmeent of the Powerflop? And better yet, Copflop?

* Tom

Yeah, I know what you're saying... not to mention that any
dog would probably take the time to listen to your arguements before
deciding to bark... ;-)

I've heard rumors that Apple isn't doing particularly
well right now! ;-)

Is there any truth to them? ;-)

Face it Mr. Crap. In two years *you* too will have
to bow down before the might of the Microsoft Empire! ;-)

Well, good day Petey...
And stop abusing those Mac disk-eject holes, I've heard
that cyberphilia is bad for ones health. ;-)

* Tom

It doesn't matter how much RAM you have. It doesn't matter how much disk you have. It doesn't matter how fast your CPU is. An analog modem will not be able to do realtime QT (in or out of an HTTP client/HTML browser)...

>>

>Just 19.2! He he he.  Those ST's sure make a good solution..

       You conveniently ignore facts that do not support your views.
       The OS architecture of the ST makes it less than trivial to
       patch it (the OS). That particular patch has been around for about
       5 years.

I think we need a comp.sys.atari.bash.that.whipping.boy.peter.sinclair-day.

The rest of the Atari groups should become moderated so we can leave the
others in peace and use this group to bash our favorite whipping boy.

Can't say that I mind all this flamage. It's really funny to see everyone
flogging the whipping boy! Boy, what a doofus! He looks dumber and
dumber with every post! If he had an ounce of brain he might be
dangerous.

If you haven't done so, flame PeePee! Trust me, getting frustration out
like this feels good! And he's such an easy target.

The real victims in all this are the people who want to have real
discussion on Atari topics. Instead, they have to deal with all of
this shit. My apologies to them.

And no, ignoring Sincrap doesn't make him go away. We've tried that

```
before.  He's been a fungus on these groups for almost 2 1/2 years now.

/Kevin

I suspect he writes the messages as he does, to get attention. I dare
say lines like the above are the *only way* he can get attention from
women.

Funny thing was, I was almost sure that he'd post a line like that in
his reply (one of the reasons I didn't kill-file him immediately - too
curious to see if I was right).

Sad sad sad!

Love,
  Julie.

(And yes, he has his own special place in the kill-file now).

>

First of, Sinclair-Day is british hyphanated and common in the UK. Considering
that a sorry ass yank would not have known..

You and kev must hangout.. Conjure up facts - that Atari's past behavior would
doom the jag...What do you not understand?.. I see, trying to get even because a
duf like you recommended jags to friends and saw their investment at a flea
market...

> Going to get my caffine now... <===see, three periods, just like
>   in hockey! 8-)

Only to keep the likes of you occupied:)..

:> Not that I'm surprised. But I did think that at this point
:> he might have figured out that there is more to life than
:> Atari bashing.

:Hi Tommy, remember macoroni...

You mean that parody of "Macarena"? Of course I do!
They play it on the radio every morning. ;-)

:> Some people just never learn...

:Yep..looking like a dweeb in rec.music.misc

What, you mean that you have made a fool of yourself in that
newsgroup also!? Knowing you, I'm not surprised.

So what did you do there, brag about how the Mac (IYO) is the
greatest computer for music or something? ;-)

:> I wonder how he's taking the impending collapse of Apple?

:Just well. Can't wait for Montana, Epic and K-12 in the fall.

And how will any of the above save Apple from its impending demise? I don't think that any of them address the fundamental weakness of the Mac line: the fact that it is nonstandard.

Nice try Sincrap, but you have once again done nothing but show how pathetic your debating skills are! My dog could do better ;-) .

* Tommy ;-)

While Mr. Sinclair can be a big pain at times, one can easily modify
the below list to cover Atari fanatics who are still following the
company, after they have merged with a disk drive manufacturer and
have all but abandoned the video game market.
  Not the similarities in slams between the Sinclair and Atari
fanatic...

>Oh mighty one:),.. I'l use what ever I like dufus.

You like dufus? Sheesh, Pinhead, you can't even talk straight! Maybe
Pinhead goes on these groups after he's had a few cases of Bud so he's
in a drunken stupor by the time he posts. That would explain a lot.

> I see that your team of that
>peasent sport has prevailed and the Coloradan(sp) proliterians has risen upto
>celebrate:)

What the hell are you talking about? Spying on me in other groups, eh
Petey? I'm not even a Colorado Avalanche fan, I'm a Red Wings fan.
Maybe your lack of understanding stems from the fact that all you
can do is play with corn and cows in your corner of the world.
That probably explains your genetic problems.

>> There you go again! You have a neverending slew of problems, don't you?
>> But why do I bother? How can anyone expect your grammer to be correct
>> when you can't even stop spewing shit! You just made 4 posts in this

>> card of yours and buy a clue!

>He he he..You're existence is in question..Whats the matter kevy? The jaggy is
>irelevant and mad at me for being correct..

Delusioned, aren't you? You've been predicting the demise of the Jag for
2 years now, nothing you said was foretelling the future. Tell you what,
PeePee! Your PowerMac will be DEAD someday! How's that for foretelling
the future?

Imagine a child who has a toy. He takes it out sometime so he can
bash it up and bang it up. When he gets tired of it, he puts it
away again. But he just uses it for amusement. Now, Peter...
identify yourself in this scenario. That's what you've been reduced
to.

Atari was irrelevant to us LONG, LONG ago. Whatever atari's have made of themselves in the past decade is DESPITE what atari the corporation has done.

>look pathetic..

Sorry kiddy boy but some of us are old enough to remember
the original Donkey Kong. If you mean _Donkey Kong Country_ then refer to it
as such.

Also, DKC is just a souped up version of Super Mario Bros.
No 3-D... no texture mapping... very unsophisticated game play...

...it got orders of magnitude more credit than it deserved...

>>
>>
>>
>>   Interesting how you are retreating from 8-bit to 16-bit on your
characterizations

>Retreating, who me jabba?
Yup... your original position got shredded enough for even
you to back off of it. Either that or you think that a Super Famicon is an
8-bit console.

(with your technical prowess that would not be at all surprising)

: Blame Atari.

     Gee Pete ... that's great support for your argument about the
Jaguar games being of 8-16 bit quality! You just admitted you've never
seen one single game.

: Still vapor..
```

You were suggesting that it hadn't even been started. I've seen demos of the game Peter ... enough to know that I've never seen anything remotely comparable on the SNES.

: Enough to know, that the titles or lack of was one of the main reason that the
: Jag flopped.

Yes, but you ducked the question again. What do you know of specific titles? You claim they're all 8-bit and 16-bit quality when you've never seen a single one. And you want to teach kids how to write effective essays? You can't even support your argument. You just duck the question.

: Well see, but don't hold your breath..If it is released will it sell in the
: millions like Donkey Kong Country?

I doubt it. But that isn't the issue now is it? The Jaguar could do DKC without breaking a sweat but it would take several Super NES's to create the computing power needed for IS2.

I agree Brian. There is too much "article requoting" going on ...
especially by Mr. Sinclair. As for your other comment, it's a good
attention grabber. In case anyone thinks that Atari's can't use the net,
I used to regularily use my 130XE to read E_Mail and check the USENET

```
groups on my freenet account.

: But still vapor...Can you purchase it?

No ... but "vapor" is generally accepted as being "announced but unstarted."

: Mark, I have read the reviews and seen the ATARI Lit that was sent to me about

: the Jag and titles.. Not very impressive except AVP...

How about some specific examples Petey? I can show lots of Jaguar games that couldn't be done on an SNES. There's a difference between blurry pictures and playing an actual game. You "read" reviews but you only read reviews that support your biased opinion.

: I am sure you know...Lets start with......

Sure I know. It's obvious you don't! As for games that I think could be pulled off exactly on the SNES, I'd be happy to list them:

1. Dino Dudes
2. Raiden (even though the Jag version is better than the SNES version)
3. Bubsy
4. Zool 2
5. Ruiner Pinball
6. Pitfall: The Mayan Adventure
7. Fever Pitch Soccer
8. Sensible Soccer
9. Brutal Sports Football

That's nine titles. Now there are over fifty titles for the Jag. You fill in the gaps. How about I do it for you? (I won't do all the games 'cause that will take forever)

1. Cybermorph. Everything Star Fox (fourth generation SNES game with a special FX chip) was with more polygons, faster frame rate and free flowing movement.
2. Trevur McFurr. 24 bit graphics on an SNES? I doubt it.
3. Wolfenstein 3-D. Faster and with higher resolution than the PC version. We won't even mention the SNES version.

4. Doom. Thousands of onscreen colors, network play, faster frame rate. Destroys the SNES version, even though that version was a sixth generation game with special chip enhancements.
5. Aliens Vs. Predator. Nuff said.
6. Club Drive. Crappy game, but could the SNES chuck around that many polygons? I doubt it.
7. Checkered Flag. See above.
8. Iron Soldier. A 3-D based polygon environment with texture mapping. Is there anything comparable on an SNES? Not on your life!
9. Super Burnout. Could probably be done on 16-bit if: 1) you reduced the color count, 2) lowered the framerate, 3) took away the texture mapping, 4) took away the two player mode.
10. Rayman. So ... can a Super NES put 65,000 colors on screen at once? Not likely considering it only has a palette of 32,000 and can only put 256 of those on screen.
11. Power Drive Rally. More colors than Super NES games.
12. Atari Karts. Like Mario Karts, but with parallax scrolling, more colors, texture mapping etc.
13. Battlemorph. See Cybermorph, but with huge improvments.
14. Primal Rage. Compare it to the SNES version.
15. NBA Jam TE. Compare it to the SNES version.
16. Tempest 2000. Where would the SNES get the colors for the warp effects? How would it do the music?
17. Defender 2000? Where would the SNES get those colours? How would it maintain that framerate? Pull off those graphics? Hmm...
18. Missile Command 3-D? The SNES is going to manipulate that Panzer Dragon style boss in all his texture mapping?

I could go on and on. You need to give it up Peter.

Published in 1996 jabba. Designed for lowend Macs but is Accelerated for
Powermac.

I don't know how slowly it would run on a LCIII but would be slow compared to my
7100/80.

>>>
>>>   It is a bit less of an orphan than a Mac LC in this respect.

Netscape and Mosaic can run off 020 Macs, and yes it would be slow compared to
040 and PPC. The issue is it can run on those antiquated machines.. What part
do you not understand jabba ?

In the tradition of Mr. PeePee, I've decided to waste some bandwidth. I submit the following post for your enjoyment. Feel free to pass this on to other newsgroups which are being cursed by the Amoeba.

You Might be Peter Sinclair-Day if...

1. You go into convulsions any time you see the word "Atari".

2. You tack a "y" at the end of the names of people you hate.

3. Your idea of patriotism is to buy as many Apple products as possible.

4. The phrase "edit your follow-ups" looks like UUENCODED text.

5. U kan't understand y yer spellchekker krashes on U all de tyme.

6. You think the meaning of "signature file" is "college thesis".

7. New ideas and an open mind occur as frequently as sex: Never had it, Never will.

8. Your head has been permanently relocated to Uranus.

9. You've attempted to stick your penis into the disk-eject hole on a Mac (and it fits)

If you've got more, feel free to add them to the list.

/Kevin

>>   Of course you choose the great bandwidth wasters...
>
>Ha ha ha ha ha ha..There goes your credibility. So what you are saying is
>that the ST is not capable of these plugins but does not matter.

Backend extensions have nothing whatsoever to do with the HTML
spec.

Plugins are neither necessary nor efficient even on clones/macs,
since QT is definitely NOT something that can be done in realtime
(over conventional phonewire), there is no reason whatsoever to tie
it to 'scape.

In the end, 'scape is just a hyped up version of FTP or STalker in the
case of quicktime. The required download time for the data dwarfs
the playing time of the datafile.

>
>>
>>   Most modems in use don't have the bandwidth do manage any of those in
>> realtime.
>
>Most modems? 2400 baud? My 14k modem does.. Many users do and your reasoning
That's BitsPerSecond.
baud is something else and is quite beyond your
comprehension.
>is irelevant and just shows why the ST is the wrong choice and should not be
>considered..
>

Lesse....
First we need to clear up the meaning of 14k wrt modems:
It's 14.4 K BITS. That means that actually thruput in bytes is
more
like 1.6K per second.
This leaves, for each second of video, 1.6Kbytes.
Now, even using a relatively poor framerate of say... 10fps we are left
with only ~200 Bytes for each frame of video...
This is pushing it even using differential encoding... (like .seq's)

...that might fly if not for the fact that a QT movie for 30sec is likely
to
be ~1.5M...
This leaves us with a per second thruput requirement of ~50Kbytes
(or 320Kbits) and 5K needed for each frame...

5000 is just a liiiiitle bit more than 200...

Now... tell me again of how many users get 50K of data thru a 1.6K
line?...

In reality, a 30 second QT vid will take 16 minutes to download @ 14.4.
Realtime video this is not...

BTW, a conventional phoneline has a theoretical upper bound of ~38Kbps
uncompressed thruput...

Realtime audio might stand a chance (for obvious reasons).
Unless you can point to some non-trivial use of Java, it's not relevant
to anything yet (just a vehicle for Sun to make M$ look foolish...).

There are flaws that will require an investment before results will show up..

1. Teaching status has to rise.
2. A decent salary to attract the brightest to weed out the not so brightest
3. smaller classes. At least 1-15 ratio.
4. Parental involevement is needed.

Yes money is the main factor. Look at Yale and Harvard. The high price tag of over $20,000 is needed to provide a high quality education.

Have you actually managed to run this on a 35Mhz 030. Do you know
anyone who has? Do you know anyone who knows anyone who has?

SimCity 2000 & Kyrandia III are 2 other nice examples of
misleading boxprint. (insufficient poorly detailed memory reqs)

You have the space to store the browser EXECUTABLES. At least try
to keep up. Floppy is more than enough to keep up with twisted pair bandwidth.
The TP connection is the single slowest thing on a computer, excepting the
human. The Web != Netscape and all of its horrendously big extensions.

The ST has had built in MFP settings of 19.2K since 1985.
Reprogramming of the device driver will let it do more. Even an 8Mhz
CPU still has considerably more thruput than an analog modem. Nevermind
that the ST has done DMA I/O with dedicated I/O processors from day one.

>not be splurged..

Well, it all depends on how rich the district is now doesn't it.
It also depends on what your priorities are and what you might think would be
better investment. Oddly enough, your four points above support my original
position more than they do yours...

Also, my position is more concerned with how the machines will be
used and if added expenditures will actually cause a net gain. Also, I
advocated that such objective gains be plainly stated and easily verifiable.

Mindlessly throwing money at a problem will get no one anywhere.
The Great Society is proof of that...

>>
>>   I said they could manage to do the task.

>But recently, that kids would be put off by the slowness. Which is jabba?

I wouldn't be foolish enough to run 'scape on such a machine. I
wouldn't waste such machines (or more powerful) ones with 'scape. Centering a
computing solution around the slowest possible medium, when others are
available and much superior, is beyond absurd...

>>
>>   I never made ANY statement on what was more appropriate. (besides
>> stating that there is no system such that it would be more appropriate wrt
>> other systems).
>>

>You need to go back to your previous statements.

Not that I'm surprised. But I did think that at this point
he might have figured out that there is more to life than
Atari bashing.

Some people just never learn...

I wonder how he's taking the impending collapse of Apple?

: Yea right...

Hee hee hee. It looks like Petey once again doesn't know what he's talking about. Hey Petey ... pick up a copy of the OS9 Level II manual (The CC3's OS) and you'll see a word that constantly pops up. It's "MULTITASKING". Or better yet, go into bit.listserve.coco and try to convince them that the CoCo 3 can't multitask (especially since many of the people there are multitasking while they read their E_Mail). They'll make you look stupider than you all ready do!

Apparently you can't do any better. It was a rather pathetic retort
and
he was posting from an *.edu domain not a *.com one btw...

Nah, that would require the existence of brain cells in Sinclap's head.
But his feeble brain farts show us that all he's got up there is hot air.

I've noticed that he now accounts for almost half the traffic on this group.
What a no-lifer. At least he has provided us with a mascot.

>I wonder how he's taking the impending collapse of Apple?

Denial. He's an Appleflop owner in denial. Maybe that's why he loves
to be on the Atari groups; misery loves company.

/Kevin

I won't say hello here, 'cos I wouldn't mean it,

Suggestion, either:

a) Drop Dead.

or

b) Don't damned well quote every single line of the post you are replying to.

Or better still, do both.

Until I started coming across your postings, I ignored the things others said about you - as to listen to them without any experience of my own seemed unfair. But now I am begining to realise that what they said does have an awful lot of severe truth in it!

Not putting "Love," at this point (as I would usually do) either,
Julie.

(Consider yourself kill-filed, and mail-killed.)

>   Wow!!! What a *stunning* comeback! Whew, I'm reeling from
>the sheer cleverness of it all... excuse me a moment I need to rest.

You should be proud of him. That's one of his better retorts. I've had
better conversations with a dog than those I've had with Petey.

>Gosh, does *my* company know I read news? Nah, there more worried
>about me reading the web... ;-)

Petey probably spends all of his time at work wondering whether or not
others are posting on company time... that is, IF he works at all.

Do you get it yet, Pete? (Of course not) Your drivel is unwanted
here. Your spew contributes absolutely nothing to the discussions here.
All you've accomplished is to become the laughing stock of Usenet.

/Kevin
